Want to buy a used but in VERY good to EXCELLENT condition faceplate assembly for an older PRO-48 crystal scanner by RadShack.Will also consider one from a PRO-47 (will work but PREFER the 48 one.)
Will also consider buying entire NON-WORKING PRO-48 with good to A-1 cosmetics if you have one that's broken.
Please Email me directly with what you have and price in first Email. ALL replies answered.
Many Thanks for any help U can provide !

7. Scanners 4 Sale

Newsgroup: rec.radio.scanner
Date: 2002-03-01 02:58:53 UTC
From: klarrg@aol.com
Message-ID: <20020228215853.07481.00000870@mb-ce.aol.com>
Source record: 51425

I have the following scanners for sale...

1.) Regency Z-10 professionally converted from 10 to 30 channels with beep-delete and audio enhancement mod.Radio is a SOLID 9 out of 10 both cosmetically and functionally, and includes back-of-set antenna and power cord (no box or booklet).Scanner is in AMAZING shape for its age and is housed in an attractive, wood-look cabinet with LARGE bright green LCD display . Covers 30-50/144-174/406-512 Mhz. $40 SHIPPED

2.) Bearcat BC-12 CRYSTAL 10-channel base unit. These are quite rare to find, and this one is in BEAUTIFUL, virtual MINT condition (SOLID 9 of 10 !).Has scan speed adjustment control and delay on/off switch. Includes antenna and power cord (no box or book).Works and looks great..a must for collectors or, as a reliable backup radio ! $40 SHIPPED

Radios shipped by USPS parcel post. Insurance optional if requested as is different shipping method for additional cost as per USPS rates. If interested or have any questions, feel free to Email me @ any time. All replies answered. Payment via M.O. or personal check (w/ 14-day waiting period for clearance).

Thank You and Happy Monitoring !!

lol
stealers shouldn't take credit for something that they exactly copied.
Besides changing the background and suck. The site and the true RS scanner
mod site isn't 100% up to date. if you want to include test modes and
discrim tap mods. I know my 2045 has a few key combinations to set it to
test mode of factory test freqs, display test. um. To auto turn on the radio
light and off.

here is the true site Mr. Theif

http://www.leto.net/docs/rsmods.html

atleast if you steal. make it look different.

Dev.

Does anyone have a copy of this issue they might be able to locate?

It contained an article by Steve Donnell about modifying an AR8000 to reduce audio clipping, along with an important diagram referenced by the article. The article is online but without the pictures.

There were 3 diagrams, one of which showed the relationship of the 5-pin IF filter you needed to remove compared to the 3-pin IF filter you replace it with. The text speaks of the diagram showing how to handle the pin difference.

If anyone has this issue, or knows where I might locate one, please let me know! I'll gladly cover photocopy/mailing cost, if needed. Or perhaps you could fax my office.

You can find the article (sans pictures) here:
http://web.archive.org/web/20020228142402/http://www.geocities.com/capecanaveral/hangar/1251/8kclip.html

Thanks for any help,

James

12. 900 MHz Antenna

I'm in CAP and only have 3 antennae on my vehicle,
Fire (Lowbander) , CAP VHF Antenna & A 2M Antenna

Although I have considered making a doppler array or similar
switched array for ELT tracking.

What do ya think of the CAP / NTIA regulation change as of
the Dec 2001 sundown date.. alot less traffic than there was before...

Go to <http://www.grove-ent.com> and check out the ICOM IC R-2. Bob also has several R-3's and a R-2 in his used equipment section BOB'S BARGAIN BIN <http://www.grove-ent.com/hmpgbbb.html>

For the price the ICOM IC R-2 is a great wide band AM/FM scanning receiver. Neither the R2 or R3 support Signal Side Band, but will work bands not available on your Uniden BC 245 XLT.
A AOR AR 8200 MK II will give you a wide band scanning receiver with SSB but no trunking. The Uniden BC 780 XLT will give you more bands and trunking along with tone squelch!

Go to a frequency data base and look up the taxi cab frequencies in the area where your going to be listening or working
to see if the taxi company's frequency is on the standard VHF or UHF taxi band or if it's on another business band
frequency or a trunking system. Look at the antennas on the cabs, this will give you an idea of the band/frequency they are on. Try this site:

< http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts>

Check out the FREQUENCY and TRUNKING boards at <http://www.strongsignals.net> down at the bottom
of these boards are great frequency data bases that complement the FCC database. You may find the taxi company
there or place a request for the taxi company's frequency, mentioning it's name and the city/state where its located on the FREQUENCY board. Look in a local telephone book for the correct and complete name and location of the cab company to key into the data bases and posts

Remember the taxies in the VHF and UHF taxi band work DUPLEX most of the time, I.E. the BASE station is on one frequency and the TAXI is on another(unrepeated) frequency. If they us a business
band or other Land Mobile band frequency they probably will be just on one frequency either SIMPLEX or repeaterized.

Once you've got the frequency then make a chose on a radio scanner that will work with the company's channels.
A hand held unit would be the best way to go, with a mobile mag mount scanner antenna or cell phone mag mount for
trunking on top of your vehicle. Another last resort is to us a FREQUENCY COUNTER and stand like right next to a
cab and "capture" the frequency on the read out.Then compare the frequency to listeing in the data bases.
Jim

It's obvious your not happy, sell it.

If you go for the R-10, make sure you drop by radio shack and pick up the high capacity rechargeable batteries. You get about 4 hours of use out of standard "AA" batteries. With the high capacity you get about 9 hours. These are $5@ but well worth the price, you need 4.

I've used one of the Radio Shack thru the glass antennas on my truck for 10 years...they work ok for what I use them for. One tip though....seal the edge of the foot on the outside of the windshield with silicone as I've had two of the darn things literally blow off the vehicle (RS sold me the replacement at "cost") which is 'bout all I could ask for.

Ok, so it will work. Now, does anyone know whether or not the Belkin USB to DB9 adapter work well?

Thanks in advance,

Joe

hahaha. No.

But thanks to the rest who replied.

I want to be able to go into a new city and listen to the dispatch calls
to see if I can pick up driving driving there. I've heard all too
often some
new driver being trained. Even in a small place it's easy to get lost.

Daytona Beach Police/Fire Comms are live and online at
http://www.MilAirComm.com I've also listed a complete set of 10-codes
so you can follow the auction.

Just minutes ago we had a strange call. Person checked out of his
motel room but left his pet Alligator behind. When the police arrived
sure enough there was a 3 1/2 foot long alligator in the room.
BikeWeek not a full day old and the nuts are already in full force......

Weekend weather is for highs near 80 and scattered Thunderstorms so Its
going to be a great first weekend to bikeweek. Officials forecast
500,000 bikers in town for the events. After dinner we're going to
take a ride downtown and check out the nuts first hand.

Check out the live comms at http://www.MilAirComms.com

Have some scanner/ham questions for you folks in the know.

I have read some recent articles in various places that talk about some technologies that I find interesting, but am unfamiliar with. I have tried to locate data on each technology, but I end up surfing all over the place and get scattered information at best.

Specifically, I am interested in the technology/devices/software that allow one to pull data off the air, ie, the various types of data transmissions used, satellite weather reports, etc. I am also interested in setting up a packet gateway to the internet. All of the all-caps acronyms that I see flying around here so regularly just confuse me, and putting each one in a search engine sometimes doesn't pull up anything at all (and sometimes pulls up so much I am simply overwhelmed). I need a primer.

The problem I have right now is that I can't find one or two really good sources of information... Does anyone have a good catch-all site or book/article that can introduce me to all of the things I can do with my scanner and radios other than just voice? I am truly interested in everything and would like to learn about it, and then possibly set up rigs to work each.

Thanks.

I used a glass mount for a while on my truck but found that
it did not work as well as my trunk mount on my car. The
range did not seem as good as the glass mount. The glass
mount worked fine locally but seemed lacking on the
fringes where the trunk mount still worked well.

FYI - These were 2M/440 amateur radio antennas.

>Is that the 20-044 model being sold for $9.99 at your local radio shack that has been discontinued?<

Smells like it, don't it. Only problem is that someone has bought them all up. I live in a city with 8 RS's and I only found two antennas. I took one and the clerk at RS took the other.

Did the adapter work? My notebook has no serial ports, so I went the USB/serial route too. I bought a PDA adapter but it never worked ever, so I bought a usb/serial adapter from pfranc.com. What a great cable. Works like I actually have a serial port.

When I bought this laptop I never thought I'd need a serial port.

A lot of the mid-end notebooks do not have serial ports.

And may I recommend the Win93 program from http://www.starrsoft.com/freeware/Win93/index.html ?

It kills that pro93.exe program hands down.

What kind of RF environment are you in? If it's a RF-rich (UHF repeaters, 800 MHz trunking, etc.) metro environment, you'll probably be OK. If you are needing to monitor non-repeater systems (VHF- high or low, etc.) with mobiles more than a couple of miles away, or UHF/800 systems at a distance, forget it. I tried one with my BC-245 when I first bought my car, and found I could do better putting the factory duckie on one of the window-lip mounts that RS sells.

It's 72.010 (ch11) through 72.990 (ch 60) with 20khz spacing. I've
heard that there are other services that use the slots in between some
of the channels.

Here's an RC specialized receiver that's available. It doesn't have
all the req's you want, though.

Thanks John,
The model number is P93YPC00D2AA
I have had a look at Batlabs.com and though they have some interesting info
I still cannot find out the basics about this particular model.
Next to the volume knob there is another knob numbered 1-7 is that a squelch
or for changing channels?

And above the large button on the side that is pressed to transmit there are
two small buttons but they are unmarked, I would also like to know what they
do.

Thanks again,
Bry

For changing channels, it has 8.. The squelch is preset - no knob..

IIRC they can be programmed to send 5 tone signalling, if you press them
and they go 'burp', they are not programmed..

Yes it is. I would suggest checking your local Radio Shack first! Be
advised that they are EXTREMELY difficult to find. If you do find
one, two, three, etc. BUY THEM! If you can't find one locally (I bet
this is the case), buy one from me!

I got lucky. I found 11 within 30 miles of my home. I bought every
one of them. They are getting extremely hard to find. The simple
fact remains:

These are the EXACT antenna as the Scantenna being sold on Grove
Enterprises for $55. They are the EXACT same antenna being solf on
eBay by AntennaWarehouse for $36. I beat both prices and have cheaper
shipping charges. Free Enterprise...Gotta love it!

>
>
<snip>

Graeme,
I purchased a copy of the ADMS-3 software and cable from DSE
Dandenong Vic this morning. They stated that it was the last copy
they had in store, any stores actually, but would receive more stock
the middle of March 2002.

The software was written by RT Systems in Huntsville AL U.S.A. URL:
http://www.rtsars.com/yaesu_template.cfm. You can purchase a copy
from them for $20.00 US and their will email you the software so
delivery is almost instant. Product code is ADMS-3U. The real
problem is the cable.

Please note that unlike what is published on the web the vr-500 cable
does NOT appear to be the same as that used in the VX-1/VX-5. The
VX-1/VX-5 units use a 4 pole mini stero plug whilst the VR-500 used a
3 pole mini stero plug. They may be compatible but I'm not sure. DSE
have stock of the VW-1/VW-5 software and cable but I'd try the cable
before using it. DITTO for building one from the spec's listed on the
net.

Hope this helps.
Murray.

What phones on the band that are Analog are NBFM. Look between 902-915.

Most phones are Digital and use Frequency Hopping or Direct Sequence spreading so picking them up on todays scanners is not possible.

Can anyone suggest a possible cure for the following fault on my Icom IC-R7000?

After 30 minutes from switch on, sensitivity starts to fall until after 2 hours the radio is completely deaf.

I have replaced the capacitors on the DC to DC Unit, C19 & C20 on the Display Unit, C135 on the IF Unit and all capicitors on the Reg Unit as suggested by various modification sites.

All have had no effect on curing the fault.

Any suggestions greatly appreciated.

Thanks.
Peter Kay.

I have registered a new domain k7on.com and my web page
will be re-located on managed servers with high-bandwidth
connections.

Please replace any bookmarks or links with:
http://www.k7on.com/

For the time being, while DNS caches update, I will
keep the qsl.net/k7on web page online, but expect no
updates.

Thanks, Brian

Not familiar with this rx. but have a lot of Icom gear here. Is this gradual deafness on all ranges or just one "band"? These sorts of fault can be an absolute b***er to find :-(

Initial thoughts: does it happen with the rx out of the case? Can you accelerate the onset of deafness by applying GENTLE heat to a PCB? After 2 hours, when the thing is deaf, how long does it take to recover? Instantly, or a few minutes, or hours?

Have you tightened all screws? Common fault in Icom gear seems to be a poor connection to chassis earth, although this usually results in intermittency rather that gradual deafness.

What is the S-meter doing during the couple of hours?

Richard

No. You need a program called Trunker, a laptop and a scanner with a discrimator output to get the individual IDs.

No. I disagree. Their analog signal bandwidth is closer to 10-15 khz., not 5-7.5 khz. Depending upon what receiver you use and what it processes as NBFM, that may be all the choice you have vice the WBFM for FM stations. The ICOM 7100 in the FM mode is quite compatable with the signals, but not the NBFM mode.

Yeah, send it back to the factory repair facility in Bellvue, Washington and quit tryingto fix a sophisticated receiver yourself without the proper test equipment and most likely needed components. I've done it and it works. They will repair your R7000 at a reasonable labor rate plus parts.

I have and use 2 base scanners and for now have a base antenna for each radio.
My question is: If by inserting a Y connection to the coax coming from a
single antenna allowing both scanners to be connected to a single antenna,
would that allow for any dead zones in any freqency ranges?

Reply to mjlabo2@eatel.net.
Many thanks to this group.

If you mean unblocking blocked frequencies in the scanners, then the
answer is no.

All I know is that I noticed a huge loss in db on the glass mount antenna. I just recently ripped the darn thing off the window and bought another NMO trunk-lip mount. Works a so much better.

99. Pro 46 cell mod question

Newsgroup: rec.radio.scanner
Date: 2002-03-03 02:31:55 UTC
From: "Ian W. Douglas" <idouglas@calcna.ab.ca>
Message-ID: <Pine.A41.4.05.10203021931000.22290-100000@srv1.calcna.ab.ca>
Source record: 51310

Let's say that (hypothetically) I had temporary charge and possession of a Pro 46 scanner with the following stuff on the back part of the case:

model #: 20-305
FCC ID #: AAO20-305
serial #: 35056xxx

and a white label that says simply: 10A3

Is this one of the date codes before 2A4 or after? That is, is this one of the older Pro 46s that could be modified by removing one surface mount diode and moving another? Or is this one of the factory re-modified radios which requires "surgery" just to re-enable the keyboard test mod?

Part of the instructions for doing the cell mod on this radio (regardless of which type it is; see above) includes the following: "Unsolder the copper-coated plastic shield from the microprocessor..." There are two such shields inside the Pro 46 to which I have access. Which shield is meant in the instructions...the larger of these two shields, attached to the keyboard/speaker/front-of-case part of the radio, or the smaller shield, attached to a smaller, "inner" board accessed by disassembling the device? In other words, is "the" micontroller attached to the keyboard PC board, or to the "inner" PC board? I would rather pose these questions to the group before pulling a soldering iron on one of these shields and then finding out that I unsoldered the wrong shield.

Thanks in advance,

Ian Douglas

The cable for the Ft-50 is basically a db-9 to 3 pole plug, with a 4 pole
adaptor for the Ft-50. However, the 3 pole cable will even program Icom
rigs. So I'd suspect, that this cable would do the VR-500, just unplug the
adaptor. I've even had luck making a 3-pole to rj-11x plug adaptor to
program my ft-90 with the same cable.

You can see for yourself, I setup a temp website until my QSL account gets
setup:

http://personal.bhm.bellsouth.net/~rccain

Click on the Mobile button. It's a little hard to see the 10m antenna, but
you can tell it's there if you look at the bases.

I guess I should be more specific for those of you too lazy to open up the Pro93.com web page. Type http://wwwpro93.com into your computer. Wella, a web page opens that offers freeware (a zip program for Pro-93 scanner) for the scanner to comm with PC. This same web page offers a method to order the one way/two way cables for this pupose also. Damn, that was hard. Even I could follow directions, order the shit, hook it up and get my scanner to comm with my PC (using Win93version 00.17).
Good luck out there sports fans.....

I'm not too lazy to open that page. I know what's there and what's
not there. And what should not be there.

Maybe the problem is people who are too stupid to correctly describe
what they find.

you could own a great GM vehicle or ford or dodge. It may have Bose. But I like Pioneer. Cell listening is illegal in the states but not in eu or Canada. If you read up on basic frequency info. Normal radio station is what. 87 - 108 or something. and cells are 800 Mhz area and 1.? Ghz area. I don't need to post the freq's simce most have a idea. you will have to buy a can or eu scanner to rx cell. You can buy the best Stereo System out there for your vehicle. A scanner or other type of rx equipment will be neededto receive the cell band. Not to say a half decent antenna.

123. Search behavior is odd (how do scanners determine starting freq, with a given step?)

Newsgroup: rec.radio.scanner

Source record: 51339

My question may or may not be specific to the AR8000 (it may be common all all scanners), but I needed to find out from other people how this works for them....

I saw a 'band plan' chart that showed a step of 200 was recommended for searching in the FM band. Since my AR8000 was using a step of 100, I figured it would make the search faster and more efficient to change to 200. I was showing a friend how easy it is to set up a search using the FM band when I caught onto something unexpected.

I set up a search from 88.1 to 107.9, WFM, step 200, but the scanner was locking onto even-numbered frequencies, such as stopping on 97.400 instead of 97.300 where the station signal really is. I expected it to begin at 88.1 and hop in increments of 200 searching through (88100, 88300, 88500, etc). I thought I'd "hit" all the US FM stations in the area. Instead, it was only locking onto even frequencies, 100 off of the real station frquency.

Did I do something wrong, or miss something? If I set the step to 100 the AR8000 "does the right thing," so I know it can work fine, but I'd like to understand what's up all the same.

I suspect the scanner does not use the starting frequency as the basis for the step, so instead of hitting on 88100, 88300, 88500, etc., it went 88200, 88400, 88600, and so on until it was close enough to a radio station to stop). This explanation, while logical, sounds like a goofy way for it to work. However, whether I start the range on 88100 or 88000, it seems to work this way.

I'd like to find out if anyone knows for sure.

Perhaps there are other settings affecting this?

Thanks for listening!

James

P.S. In looking at this closer, when using a step of 100, it still sometimes locks onto the even-numbered frequency just above the true station frequency. What would cause that? Is the scanner in need of an adjustment via software, or service from AOR, perhaps?

Why heck yes: Three progressive 2-barrel carbs and a hi-rise
crankshaft and you should be able to pick up anything you want. And
don't forget the lakespipes and glasspaks!

125. Please, help me!!!!

The R8500 radio is not dependent on the operating
system you use. That's a dependency of whatever control
software you use.

ICOM RS-8500 Software

I have ICOM's RS-8500 software. It works on Windows 98
but I don't know if it works on Windows XP.

tk8500 Open Source Software

I've had reports from users of tk8500 software
that it works fine on Windows XP. On the other hand, one
user couldn't get it and another radio program
to work on Windows XP so he restored
Windows 98 and the radio software started working
again. (I'm using tk8500 on Linux as I type this.)

tk8500 may work on MacOS X, too, but I don't have a Mac
so I can't test it there.

See my web page, http::/members.core.com/~parnass
for more info and tk8500 download.

For the PRO-92, you would use Win92, also by Don Starr.

There is a link to the software at www.pro-92.com.

I'm not familiar with the differences (if any) between
the AOR 5000+3 and AOR AR-5000.
I've tested both an AOR AR5000 and ICOM R8500 and published
full length reviews and comparisons in Monitoring Times magazine.
They are both great radios, but I chose to purchase R8500 after
testing both. Here are the passages I wrote in my FAQ "Buying a Used
Scanner:"

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage
super receiver. Good sensitivity throughout. AM, SSB, CW,
FM detectors. Frequency readout to 1 Hz. More features
than any other radio. DTMF reader and RS-232 interface
included. Multiple settings for IF and AF selectivity,
attenuator, AGC, deemphasis, etc. DB9 RS232C connector.
Negatives include low contrast LCD display and difficult
user interface. NFM squelch closes slowly, causing noise
burst at end of each NFM transmission. Electromechanical
relays click at various frequency boundaries, including 400
MHz, producing a clickety-clack noise -- annoying while
scanning banks of mixed band frequencies. Great radio,
otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob
Parnass, in Monitoring Times, December 1996.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks
of 40 channels although bank sizes can be changed. 100 Auto
store and 100 Skip memories but that can be increased by
reallocating channels from the conventional scan banks.
Fixed and programmable step sizes. Relays clickey-clack
while scanning across band boundaries. Triple conversion,
First IF is 48.8, 778.7, or 266.7 MHz, depending on band.
Second and third IFs are 10.7 and 0.455 MHz. Weak to
moderate cellular images starting near 1106 MHz. Rugged
construction. External power supply. DB25 RS232C
connector. Audio peak filter. Ok scanning and great
searching performance. See "ICOM R8500 Receiver," by Bob
Parnass, in Monitoring Times, January 1997.

Reprints of articles from Monitoring Times are available
from: http://www.monitoringtimes.com/reprints.html

I enjoyed owning and using a NRD535D and NRD545 for a few years
and much prefer the NRDs over the AR-5000 for shortwave utility
listening. The NRDs' variable bandwidth and IF notch filter
are two important features lacking in both the AR-5000 and R-8500.

That said, I found the R8500 better suited for SWL than
the AR5000 due to its IF shift and AF peak capabilities.
The AR5000 I tested had more uniform sensitivity in the
1000 - 2000 MHz range than the R8500.

The AR5000 has more features than the R8500 for UHF/VHF
monitoring. The AR5000's LCD contrast is poor, making it more difficult to read.
I found maddening its complex multi-keystroke sequences, required
to perform simple operations. Its 100 channel memory banks
are too large for organizing frequencies.

The R8500 is built massively on a cast metal chassis.
The AR5000 is smaller and much lighter in weight.
I found what looked like a few extra components "tack soldered"
on the bottom of at least one printed circuit board in
the AR5000 I tested. Overall, the AR5000 is more flexible (except in memory bank
organization), but the R8500 is better built and much easier to use. Good luck.

131. September 11 communications

Newsgroup: rec.radio.scanner
Date: 2002-03-03 16:52:00 UTC
From: rifleslug@aol.com
Message-ID: <20020303115200.01342.00001078@mb-de.aol.com>
Source record: 51247

I started to look back on that fateful day in New York City. I live and work on Manhattan island and pratice emergency prepardedness. I remember my boss telling me that a plane hit the first tower. My first thought it was a small single engine plane. Little did I know what would have been the out come in the next hour.

This is more of a reflection on communications and I know there are a few New Yorkers who will understand my points I will make. At the office I have a portable radio that not only picks up AM/FM bands but also the TV and weather band. We at the office were glued to listening to CBS local station channel 2. In my opinion, I found listening to the TV band in general was better than local FM or AM broadcast. I guess that I perfer to get my news from the TV source and never give the other a better chance. You can visit web site:

http://www.npr.org/news/specials/americatransformed/audio/010911.audio.html

for radio broadcast of that day. Excellent and this is what the internet can do. Also when I got back home I turn on my TV and never known that standard broadcast for TV was off the air...unless you have cable TV. Like I mention I was glued to the TV and TV was the choice for information. I encourage to all that you should purchase back up rabbit ears antenna as a possible that your cable may go off line as well. Even better yet a pocket LCD TV.

On my scanner I program police, fire, oem, ems, ham bands in general. This is what I notice. I was shock on such little or no traffic on the fire and ems citywide channels. There was more traffic on EMS than Fire. Police was busy on Citywide 1 & 2. It appears that police were doing rescue from people making 911 phone calls on there cell phones and responding. They were trap in the various offices in the areas and could not escape. Folkes having a cell phone is as important to make 911 calls as 121.5 for avation and Marines channel 16 for boaters. If you are a police, fire or emergency personal, a cell phone may save your life when your portable radio goes out or in a dead spot.

I started much to listen to OEM and RACES frequencies that night. I found it to be my first choice these days. I like to point out on how a misinterpertation on traffic can be embrassing or possible getting yourself in trouble. I pick up a message in which they were going to shut down the power grid from east to west. I live not too far from the Trade center and I thought I was going to loose power and started to fill up my 5 gallon water jugs. I keep it to myself and of course the power was never turn off. It was only in that grid by the trade center. But we did loose local phone service for almost a month. That following morning I help this lady who walk a mile to find a working phone. She ask me to use my cell phone and I smile and let her use it and others as well.

I was shock that the EBS system was not activited and even NOAA weather band. NOAA is not only for weather emergency but also non related as well. I read

some of the message that can be broadcast and some of it is very scary.

I walk home and know how important communications is. People had there radios turn up in their cars people listening over. At local radio shack stores and any thing with TV people just stop and watch and listen. This person put his TV on a crate with the cable out his window and people sat on the sidwalk just to watch. Of course we knew what was happening but just to have more information is so important. I saw this women with a walkman radio with headphone, she was walking fast and wonder what she heard. As I look back I will not change anything except that I will purchase a pocket size radio with headphones that not only picks up AM/FM, but also TV and weather band. Thank you.

Eric,

I think what Ken is trying to say is that is it IMPOSSIBLE to download Win93 from that web site. If you can do it, if you can seriously download Win93 from pro93.com, I will come to your house and be your slave for 1 year. I'm not kidding. You look on your program and tell us where on the program it says Win93. Take a screenshot of it and post it here. I'll fly out tomorrow.

And your right, education can not buy common sense. So you should quit while your ahead.

Rob in Salt Lake

you can set your steps to whatever you like.in a band plan. Most radios are sopposed to stick to it. if you wanted to scan that area at 5k steps. hehe. Go happy. the radio area you said. hmm. 200k. Would work better at 100K. Most newer car radios are at 100k now.

Lest we confuse Eric (or anyone else reading this thread) here's the
background.

pro93.com is the same person as pro92.com. He sells one-way cables he
makes himself, and two-way cables made by Purple computing.

He is also in the habit of selling (or packaging with the cables)
copyrighted software that he does *not* have permission to distribute.
AFAIK, his PRO-92 software may still be a camouflaged version of
92ware, which he is not authorized to sell/distribute.

He did respond positively when Don told him to remove Win93 from his
site.

(Rob - be careful. If Mr. pro93.com forgets his promise, and the
timing is right, you may have just committed yourself for a year.)

Eric, I had no idea of whether you're simply thrilled to have found
something that works for you (and if it works, it beats the socks off
punching those little buttons) or if you were just another one of his
shill posts. Either way, it was worth pointing out that Win93 is not
available from (and has no connection with) pro93.com.

BTW, if you'd like to see something amusing, see if you can find
pro93.com's personal site. (His initials are mjf, but I won't
compromise his privacy beyond that.) Look at his "Things I like to
bitch about" page.

Hi all,

Got some bad news this week about the condition of the engines in two of my three vehicles, so I need to move some equipment that I'm not using right now. All resonable offers will be considered, however I will most likely only contact those whose offers I accept. To be fair, if multiple offers are received at the same price and those offers are the highest ones, I'll accept the first I accept. If you have any questions at all, please feel free to email me.

PRO-2006 Scanner, very good condition, bright display, just completed replacing the keypad and half of the case (it was missing a foot). Now it works like new. Full coverage, diode speed mod done. Original antenna, box, and manual included. Asking $275.

PRO-51 handheld scanner, yes you can hear that with this one too. Very good condition, no manual or box, low usage - mostly sat on my desk - very little travel. Original rubber duck and RS telescoping whip included. Asking $100.

Grundig YB-400PE, maybe a year old. Original box, manual, and all original accessories that came with it. Excellent condition, less than 30 hours use I estimate. Paid $185, asking $100.

Radio Shack DX-392, clone of Sangean 818-CS. Nice receiver with cassette recorder/player. No manual or box, just the rig. Very good condition, very little use - probably less than 20 hours. I kept this one at my folks place and only used it when I was there every couple of months or so. Asking $90.

Kenwood R-5000, very good condition with extra filters added, high visability numbers added to keypad, plus other mods. Email for entire list of info. I have the original manual for this rig. Some keybounce, but once you get the feel for the rig it is easy to work around. A real nice rig that I never thought I'd part with. I paid close to $1000 for this one a few years ago, asking $600.

That's it folks. Thanks for taking a look!

Hi Richard. I'm in Australia & have just swapped an 8200 Mk II for an AR-3000A. Will your cable work with this receiver? If so, let me know your asking price and if acceptable, I'll send you a bank draft in US dollars the next day for the price of the Scout plus postage.
You can keep your wall warts though, as I have a box full of 240 VAC adapters already LOL.
Thanks,

Ruff

Well said Bob. I found myself nodding in agreement with every point you made. I kept the R-8500 also, mainly for the reasons you mentioned, even though in my opinion, the AR-5000 was a very slightly better performer on SHF, but the difference was really marginal. But oh, those menus in the AR-5000. They were nearly as bad as those in the Yaesu VR-5000 (but not quite hihi). Good of you to take the time to answer questions from ordinary hobbyists like us. Your comments (and your software; it's working great on my Linux box) are always welcome here I'm sure.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1337162020

This auction is for a Radio Shack Pro-90 handheld trunking scanner. It is a 9.5 out of 10 physically due to a few very minor scratches. It has been used only in my shack, a non-smoking environment. I am selling it to get money for a dual-trunking base scanner. It has never been opened and comes with the charger and orignal antenna.

This item is NOT sold "as-is". It is guarenteed to work when shipped and will arrive in that condition, unless damaged or abused by the shipping company. Insurance is REQUIRED to ensure that the buyer does not lose any money.

155. Keypad problem - PRO-43.

Newsgroup: rec.radio.scanner
Date: 2002-03-04 08:09:06 UTC
From: Matt Brummer <mbrummer@metc.net>
Message-ID: <3C832BA2.44FD6BD8@metc.net>
Source record: 51270

Scanner buttons were not working well & most had to be pressed hard to
get them to work. They were slowly improving, but in my infinite wisdom,
I dis-assembeled the PRO-43 & cleaned the contacts with a pencil eraser.

I thought this was an appropriate solution for the situation.

Now, none of the keys respond. The scanner comes on in scan mode
& works fine, but none of the keys work. The key-lock is off.
I opened it back up & checked the wiring connections. They look to
be in tact.

Any thoughts on what went wrong? Anything else I should try cleaning
the board or contacts with?

Thanks! --Matt

the problem is when you cross post and come onto a group that is not in the US,whick surprisingly alt.radio.scanner.uk is then how do you expect people to know where it is.

we all have a duty on the net to explain more,i would not ask on a US group,does anyone have the freqs for Wattisham base???

you are unlikely to know what or where that is,but i still may ask the question on a US group if it was a US owned facility as you may be able to give some sort of clue,but i would say where it was not just UK but county as well.

the more detail the asker provides,the more help others can give.

even in the US,i bet most people do not know where Fort Bliss is,and still you have not told us.

why should i have to keep searching the net for the info,you asked the question,so tell us where it is,sometimes we travel around and pick things up and do not know exactly where the signals come from,as we do not know what is in the area,so they may have the freqs but not really know it.

regards

You could always try standard contact cleaner. I had one of these Pro-43's a while back and the same thing happened to me. I sent it off to Radio Shack and they wanted some rediculous amount of money to fix it, saying it needed a new board where the keypad is.. you're better off just buying a newer scanner, unless you got a buddy working for the RS repair place.

163. Computer control R-7000?

Newsgroup: rec.radio.scanner
Date: 2002-03-04 14:23:49 UTC
From: JohnS <w6ibl@earthlink.net>
Message-ID: <VrLg8.33452$ZC3.2743111@newsread2.prod.itd.earthlink.net>
Source record: 51279

I understand computer control of the R-7000 is possible, but I have no further information. Can anyone please direct me to a source....possibly instructions, schematics, etc?

Many thanks,

John

164. Re: VR-500 Software

Source record: 51280

John / Graeme,
Note that the VR-500 ADMS-3 kit (software and cable) is still
available at DSE:

Cat #D3761: VR-500
NSW: Chullora Showroom DSE, Glendale DSE
QLD: Buranda DSE.

Ask for an inter-store transfer to a location near you. I called
before picking up mine and they quoted 7-10 days for the transfer -
hence the drive in. You really do need it for organising more than 20
channels.

If you cannot get the VR-500 then the VX-1R/VX-5R (VR-500 cable
compat) kit is also available:

Cat #D3754: VX-1R/VX-5R
Store: NSW: North Parramatta PowerHouse, Penrith PowerHouse
VIC: Carnegie PowerHouse

Write to me privately if you purchase the VX-1R/VX-5R kit.

Cheers,
Murray.

Check out reviews on www.strongsignals.net and other sites. I have read that the AR is better than the VR, although the VR looks more sexy(!). I am planning to buy the classic MVT7100

>I have an Alinco DJ-X10 and it does a very good job for me however, I never
>see any comments on the groups about them. Also, I don't see any software
>for them. Is there a reason for this?

There are a couple of software packages available that support the DJ-X10:

Excellent Shareware DOS based package from Bruce Pope
http://people.we.mediaone.net/baptpdc/djx10.htm

Commercial Windows package from RT Systems
http://www.rtsars.com/

There could be others but I am not aware of them.

174. Scanning weird range

Newsgroup: rec.radio.scanner
Date: 2002-03-04 21:39:46 UTC
From: uid0-41441-bla@catastrophe.net
Message-ID: <71f23384.0203041339.465867ca@posting.google.com>
Source record: 51290

Hi -

I have an AR8200. I want to scan the following range.

470.9875
471.0375
471.0625
471.0875
471.1125

It's kinda weird though because if I setup a search group, it doesn't
appear to be able to scan on 25k increments (which I've found the above
to be based on).

I can do step-adjust +.5k, but it doesn't like being on the

.xx7x
.xx2x

instead of

.xx0x
.xx5x

Any help is appreciated-

-#0

p.s. this is for the Chicago Transit Authority if anyone is keeping track :)

175. Monitoring 900 mHz cordless phones

Newsgroup: rec.radio.scanner
Date: 2002-03-04 22:42:29 UTC
From: faive@hotmail.com
Message-ID: <305ca694.0203041442.392bea6c@posting.google.com>
Source record: 51291

In my country is not illegal to listen to any kind of cordless phone conversations. I want to know wich is the best scanner to listening to cordless phones conversations. I have a BC245XLT and it works quite good to my knowledge. Im getting an specialized 800-900mHz antenna to improve my monitoring. Is there a better scanner than the bc245xlt for listening to those conversations. This because on those bands the bc245xlt would only search and scan through 12.5 steps and I dont know if Id buy e.g. a scanner that has selectable steps I would get more conversations. Is there a RShack, ICOM, Alinco, Yaesu or other brand better suited for this matters (better reception and sensitivity, etc, etc.). Thanks a lot for your help!

You need to build an RS-232 to TTL converter. Also, some software
will operate faster while scanning if the "remote" output intended
for controlling a tape recorder is connected to an RS-232 control
pin.

Try the RadioManager program by Ben Saladino.

I just swapped my AR-3000A for an AR-8200 MkII and boy, what a brilliant handheld. Even with the relatively small (but very well built) telescopic antenna that came with it, it is picking up SW on both AM & SSB without any trouble at all. I have (or had) a whole range of handheld scanning receivers, including an Icom R-10, AR-1000, Yupiteru 7100, BC245XLT and an Alinco DJ-X2000 and this baby runs rings around all of them. What a truly superb performer. And with a swag of accessories, it can do almost anything (except trunking which I have a Uniden 780 for anyway). Do yourself a favour & check one of these handhelds out before you buy anything
else. It'll be the last handheld, or even desktop (the antenna turns through 90 degrees) I will ever need. A true gem.

Ruff
P.S. The VR-5000 is an awful receiver. Not only is it's performance rather ordinary, but as it has few analogue controls, it relies on a very clumsy menu system to alter almost any of it's parameters, and this can drive you mad after a while. It's even worse than the AR-5000, and that's pretty bad too.

I was just wondering if there was anyone here in these groups that are in NYC and would be able to broadcast the fire ch. and quite possibly the NYPD ch's.

I was just wondering if anyone else found it annoying to have to have 5 windows open at once on thebravest.com . I think it would be nice to see a few of these companies perhaps merge or something. With NYPD.com

Sites included are as follows:

http://thebravest.com/bronx/bronx.htm
http://thebravest.com/queens/queens.htm
http://thebravest.com/brooklyn/brooklyn.htm
http://thebravest.com/manhattan/manhattan.htm
http://www.nypd.com/news.htm

http://www.firedispatch.com/
and maybe something like.... Any suggestions

Great sites, but I think it could do a bit better with maybe one broadcast.

I would think too, that a web site could be made in California that could do the whole state. That would sound like a wicked online scanner site, with all the activity that would happen out there.

Randy

190. MFJ Freq Counter Q

Newsgroup: rec.radio.scanner
Date: 2002-03-05 06:46:33 UTC
From: tucansam@whodis.org
Message-ID: <a61pk8hls1@reader2.panix.com>
Source record: 51156

Hi all,

I recently picked up an MFJ-886 frequency counter. I read some posts and thought I knew what to expect (not terribly great accuracy, but some at least). I've heard that these things require "practice" to master, and I'll admit I have all of about 10 minutes experience with the thing, but I have some questions...

This is the model that claims to cover 1Mhz to 3Ghz. I held it a few feet from my 2 watt handheld and keyed up a freq and it picked it right up, showing a very strong signal. However, holding it up to my cell phone when its off hook (800-900mhz) or up to my 802.11b card when I'm pinging away (2.4Ghz) I get all kinds of squirly results, none of which register any signal strenght at all, and none of which are remotely close to the actual frequency in use.

Is this thing only going to be able to pickup signals coming in at high power, like my 2 watt handheld, or should the sub-500mw signals sent out by my phone and laptop register as well?

Thanks!

Or just buy the keypad, it's only 7 or 8 bucks, and takes about 15 or 20
minutes to change the first time. It's not very hard to do, I do a lot
of them, and usually charge 20 bucks plus the pad. Trying to clean the
pad almost never works..

I guess I just wonder how legal is it to play my scanner at the fire scenes. I have been asked a lot of questions lately by firemen and police, and I wonder if they don't like my scanner.

I have been monitoring fire frequencies for almost 4 months now. During that time our county has had a dramatic rise in the number of arson incidents. In every case I happened to not be at work or home when they happened, so I drove over to the scene to see how I could help.

I keep an empty 5 gallon gas can in my dodge colt for emergency purposes. The police dogs seem to like it cause they always seem to find it - I think they want to pee on it.
I don't like dogs much. One bit me when I was a kid, and I peed the bed for a long time after that.

So when I try to get the dogs away from my colt, the public service officials start talking to me, and I don't know what they want.

I think I must be playing my scanner too loud.
This has happened 7 times now. Should I turn off my scanner?

When shall we meet Emilio again
In thunder, lightning, or in rain?
Static brings great pain to thine ears on such frightening nights
But wait brave shortwaver. Why must thou troll,
For brave Emilio,-well he deserves that name.
What! can the devil speak true?
I can doubt the words that pour from his soul,
Are words of fool, words that sustain the misery his life has become.
Oh what comic relief thou bringeth to our souls!
Thine weary heart must not take offense,
When we discard the skull of a fool into
The abysmal depths of blood stained killfile!

This may sound dumb, but judging from some of the ebay prices for modified pro-2006 would you say the modified ones go for more or less than a straight stock one? Also, is it economical to modify one if it is more? (would you get as much or for then the mods cost)?

Prices seem to vary more from the condition of the radio, than whether
the diode has been clipped. FYI, I still can't believe what some
people pay for a 2006. I still have one, and I'm thinking of selling
it while people are still paying big$ for them.

people will always spend big $$ for them, because they do many things better than the new ones. Like for instance, you don't have to get the manual out to use the scanner! And lock out review is right there on the front, has its own button. And does mode, and step. Very user friendly. Plus the value just keeps going higher as they are running out of parts for them at RS, like you cannot buy the knobs or the feet anymore.

Source record: 51181
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Here's the situation: The wifely unit does not want my ugly scanner antennas (or any other antennas, for that matter) on her house. However, I'm allowed to put up any and everything I want on my outbuilding, which house my workshop. A decent compromise, except for the fact that I'm usually in the house, not the workshop.

The workshop is 150' or more from the house. Too far for a long antenna cable, no matter how low loss. One of my primary scanner targets is our local 800 Mhz trunked system, and the loss at that frequency is going to be bad when you consider the total length of the cable. Not to mention the cost (I still feel faint from pricing it).

In another forum, someone mentioned the idea of putting the scanner as close as possible to the antenna, then using a remote speaker. Not a perfect solution, since I can't see the display, but it could work. My question is, how? Can I simply put the remote speaker where it needs to be, and run a really long speaker wire to the scanner? And what size wire? I've also considered some sort of FM wireless extension speaker if I can find one.

I'd really rather have a remote display and speaker. Is there any relatively simple way to echo the scanner display to a remote display, or am I getting in way to deep for the electronically challenged?

Any suggestions would be gratefully received.

That is wireless 802.11b is 2.4 gigahertz spread spectrum, cell phones, and microwave ovens are known to interfere wit it. It has a max 11mb/s throughput. 802.11a on the other hand is 5 gigahertz and has a max throughput of 54mb/s.. I hope this helps a little, and don't be cheap.. it's worth spending the couple of extra dollars, and getting the 802.11a

217. Another Programming Cable

Newsgroup: rec.radio.scanner
Date: 2002-03-06 01:52:04 UTC
From: gwheeler@vmguys.com
Message-ID: <e8bcf171.0203051752.6535b52d@posting.google.com>
Source record: 51183

I just bought a Pro-93 yesterday, and found I already had a cable for it! The programming cable from my Icom IC-T2A handheld transceiver works great! Bidirectional! All I had to do was use a stereo-to-mono adapter.

BTW, in this area (SW Florida) the Pro-93 was advertised in last weekend's Sunday paper for the $169 sale price. I hadn't noticed it before, so I don't know how long the sale has been on. According to the fine print it continues to the end of March.

The unit I bought is firmware 1.03. Works very nicely. Has replaced my Pro-94 as my main scanner.

Gerry

218. So just how remote can a speaker be? and other Qs.

Newsgroup: rec.radio.scanner
Date: 2002-03-06 02:16:09 UTC
From: Bill Seward <seward@northstate.net>
Message-ID: <ruua8uknhgmi3t2tam8iceq2f6cub2crm7@4ax.com>
Source record: 51184

Here's the situation: The wifely unit does not want my ugly scanner antennas (or any other antennas, for that matter) on her house. However, I'm allowed to put up any and everything I want on my outbuilding, which house my workshop. A decent compromise, except for the fact that I'm usually in the house, not the workshop.

The workshop is 150' or more from the house. Too far for a long antenna cable, no matter how low loss. One of my primary scanner targets is our local 800 Mhz trunked system, and the loss at that frequency is going to be bad when you consider the total length of the cable. Not to mention the cost (I still feel faint from pricing it).

In another forum, someone mentioned the idea of putting the scanner as close as possible to the antenna, then using a remote speaker. Not a perfect solution, since I can't see the display, but it could work. My question is, how? Can I simply put the remote speaker where it needs to be, and run a really long speaker wire to the scanner? And what size wire? I've also considered some sort of FM wireless extension speaker if I can find one.

I'd really rather have a remote display and speaker. Is there any relatively simple way to echo the scanner display to a remote display, or am I getting in way to deep for the electronically challenged?

Any suggestions would be gratefully received.

Bill Seward

That is new to consumers. It was accepted with IEEE at I think the same time as 802.11b which is pretty darn weird.

Now if that WAS offered when I purchased my equipment, I would have gone that way due to the throughput. I end up having to plugin hard-wired if I transfer files. The 802.11b is WAY too slow. It is still a great way to do wireless at home. I don't have interference with my X10 products either. As long as I don't get that equipment between me and the base.

802.11b itself was plagued with security issues to begin with. I have not heard or even bothered with reading about 802.11a since its new to consumers as an end product.Again with 802.11b, it was FCC unregulated frequency and phones and X10 and other devices snapped up in the freq band quickly. Again its a matter of time before 802.11a is plagued with RF interference since that is supposed to be expected.

802.11b is still VERY dominant int he WLAN arena. 802.11a is new and with the draft or 802.11g to be expected at the end of the year, is 802.11a even going to have a strong hold in the market? 802.11g will expectedly be backwards compatible with 802.11a. But compatibilty amongst the different network componetry will be based upon who is making the cards,routers and other equipment. 802.11x is simply the technology used and compatibility among each manufacturer is the consumers worst nightmare.

If you want just sound a baby monitor will do the job, for display and sound one of those 900mhz remote video security systems or even a wired one should be fine at 150 feet or so.
Funny its her house and not our house, maybe time to suck up and assert yourself for a little old discone.

Why don't' you try a pair of WALKMAN head phones plugged into the scanner's
headphone jack so people won't hear the scanner! I do this in the library and
shopping malls also air shows. Keep the scanner inside your
clothing and folks may feel you ONLY HAVE A WALKMAN stereo. Sparkies a re a
staple of fire seines however
psychological profiles of arsonist relate they like to return the the fire they
just may have set!. This is why folks are questioning you. sign on with a local
newspaper and get a PRESS PASS, then write up the fire for them.
JUST stay several blocks away from the fire seine.

Be careful here. Rebroadcasting the police reception 'could' pose a
problem if someone else discovered it.

What is wierder is 802.11g, the 22 Mbit/s 2.4GHz system that I haven't
seen a single unit of yet.

802.11a manufacturer's are adding proprietary compression to these
systems to get 70 - 100 Mbit/s throughput. However, 802.11b was half
duplex. "Real" Fast Ethernet can be full duplex at 100 Mbit/s for a max
200 Mbit/s (100 each way). Same with gigE - 2G/s max.

You can never watch your kids too closely. Its not the kids actions I worry about its the other whackos in the world. Look at San Diegos Danielle V. Case, the parents didnt watch carefully or lock their door because they were too busy smoking pot and getting laid to think about their children.

I would suggest you carry a half full, leaking gas can with you at all times
and take up smoking. Be sure to keep your scanner tuned to the fire freq.
so you can hear the trucks coming to put your sorry, smokin butt out.

Oh, you might save a channel for your local funeral home freq. just in case
the fire trucks get sent to a wrong location. Then you can hear them haul
your smokin butt to the undertaker.

228. Realistic PRO-2006 Scanner BEAUTIFUL!!!

Newsgroup: rec.radio.scanner
Date: 2002-03-06 04:09:33 UTC
From: criflorida@aol.com
Message-ID: <20020305230933.03475.00002138@mb-fl.aol.com>
Source record: 51194

See it and BID at:
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1336321912

The CLASSIC Realistic PRO-2006 Programmable scanner
FEATURES INCLUDE:

Liquid Crystal Display-shows the channel and the frequency you have selected, as well as other information.

Two-Second Scan Delay-helps to prevent your losing replies on a channel while you are scanning.

Memory Back-up-keeps the channel frequencies stored in your scanner's memory if a power failure occurs.

Lock-Out Function-lets your scanner skip over a specified channel or group of channels.

Ten Channel Storage Banks-allow you to group your stored frequencies so that calls are easier to identify.

Priority Channel-helps to keep you from missing important calls on the selected channel.

Direct Frequency Search-allows you to scan through every available frequency to find interesting broadcasts

Monitor Banks-allow you to save up to ten additional channels located during a frequency search.

Sound Squelch-keeps the scanner from stopping on a channel that is only broadcasting a carrier, with no voice or other sound.

covers a wide frequency range: 25-520 MHz, 760-823.945 MHz, 851-868.945 MHz, 896-1300 MHz

As you can se by the pictures, this is an extremely clean unit.. There are also modifications all over the net to do other things with the scanner… That’s all up to you… You are bidding on he scanner alone with no antenna or manual The manual is available online at

http://support.tandy.com/support_electronics/8246.htm .

Take a look at the picture and BID TODAY!! If you have any other questions about this unit feel free to connect me at CRIFlorida@aol.com.. Lucky winner pays shipping FOB Miami, Florida.. Happy Bidding!!

229. FS: YEASU FRG-9600 ALL MODE SCANNER

Newsgroup: rec.radio.scanner
Date: 2002-03-06 04:13:22 UTC
From: criflorida@aol.com
Message-ID: <20020305231322.03475.00002139@mb-fl.aol.com>
Source record: 51196

Guess what!! Ebay has pilled this scanner from sale, so here it is for you guys.. If interested, email me at CRIFlorida@aol.com and we can talk!!

PICTURES AVAILABLE!!

The FRG-9600 is an all-mode scanner that covers 60 through 905 MHZ continuously and comes complete with 100 keypad-programmable memory channels.

In addition to FM wide (for FM and Television broadcasts), FM narrow (for two-way police, military, business and amateur communications) and AM wide and narrow (for aeronautical and amateur communications), the FRG-9600 also provides SSB (single sideband) reception up to 460 MHZ, allowing reception of amateur and military SSB, as well as the ACSB mode. The SSB mode also provides for easy reception of CW (radiotelegraph), and a front panel tuning knob is provided to simplify the tuning of SSB, CW and narrow-band AM frequencies. Seven scanning/tuning rates between 100 Hz and 100 kHz assure quick and efficient tuning and scanning in all modes.

The scanning system allows either full or limited (keypad programmed) band scanning as well as memory channel scanning with auto-resume. In addition to carrier sensing scan stop, audio scan stop sensing is also selectable to avoid stopping on inactive "carrier-only" channels. Scanning steps are selectable, with the wide steps indicated on the front panel display. Signal strength is indicated by a dual color graphic S-meter on the front display. A 24-hour clock/timer is also included, along with a recorder output (for automatic power on/off switching and recording of transmissions at any time). Additional jacks provide CPU band selection outputs, multiplexed (FM wide) output, AF and RF mute and other control signals for maximum expansion potential with future options or for those who wish to provide their own add-on hardware for
special applications.

The Yaesu CAT system provides a direct control link to the CPU in the FRG-9600, thus allowing operators of personal computers to add virtually unlimited customized control functions in software (such as multiple, organized memory banks, automatic tuning and customized scanning systems) using most of any personal computers and a Yaesu FIF CAT interface unit.

A television video IF unit may also be installed as an option, allowing reception of television images (NTSC format) with a video monitor connected to the video jack on the rear panel.

SPECIFICATIONS

Frequency Range 60 - 905 MHZ (up to 460 MHZ for SSB)

Modes, 3dB Bandwidth FM Narrow (15 kHz BW)
FM Wide (180 kHz
BW)
AM Narrow (2.4 kHz
BW)
AM Wide (6 kHz
BW)
SSB (2.4 kHz BW)

Conversion Schemes Triple (FM-N, AM, SSB)
Double (FM-W)
Single (Optional
TV Video Unit)

Intermediate Frequencies 45.754, 10.7 MHZ and 455 kHz

Image Rejection 60 - 460 MHZ -50dB typical
460 - 905 MHZ
-40dB typical

Typical Sensitivity FM-N 0.5uV (for 12dB SINAD)
FM-W 1.0uV (for
12dB SINAD)
AM-N 1.0uV (for
10dB S+N/N)
AM-W 1.5uV (for
10dB S+N/N)
SSB 1.0uV (for
15dB S+N/N)

Tuning Steps FM-N: 5/10/12.5/25 kHz
FM-W: 100 kHz
AM-N: 100 Hz/1 kHz
AM-W: 5/10/12.5/25
kHz

Memory Channels 100 Channels

Audio Output 1W (into 8ê with less than 10%
THD)

Power Supply Voltage 12 - 15 VDC

Power Supply Current Operating: 550 mA (maximum)
Power Off: 100 mA
DC Supply Off: 3
uA max (B/U)

Case Size (WxHxD) 180 x 80 x 220 (mm)

Weight 2.2 kg (4.9 lbs) without
options

As you can see by the pictures, the unit is in very good to excellent condition
with a few scratches here and there and also the face trim on the top face of

the unit (which has the yeasu logo and the model number is also missing.. That, of course, does not affect the functionality of the unit.. Im supplying the unit with a 12v AC adapter so that you can plug it in right out of the box.. Ive done some basic reception tests and everything sounds good.. I don’t know, however, what if any options are installed in the unit.. The sale is for the scanner alone (with power supply) with no antenna or manual.

I would suggest you carry a half full, leaking gas can with you at all times
and take up smoking. Be sure to keep your scanner tuned to the fire freq.
so you can hear the trucks coming to put your sorry, smokin butt out.

Oh, you might save a channel for your local funeral home freq. just in case
the fire trucks get sent to a wrong location. Then you can hear them haul
your smokin butt to the undertaker.

Well.....I hope everyone gets at least one mistake.

Very sorry to Bill Seward and to the rest of the group, my last message, which ended up here, was met for the troll doing the fire freq thing.

Again, my apologies to Bill and to the group.

I bend over for my 20 swats......

Bill

I like your idea. I've always imagined that digital scanners would be black boxes handling the RF with a USB connection to a PC that would do the digital demodulation in software and play audio through the sound card. The key here is to get enough processor power in the PDA to run the digital decoder. Not insurmountable, they have a cell phone attachment for the Handspring. But imagine the benefits of flexible software performing multiple types of digital demodulation, computer controlled scanning, data logging and sound recording all under unified control. A hobbyist's dream. Two practical problems: demod schemes are usually manufacturer-proprietary and the commercial market is also too small to support development. But I can still dream.

233. Re: Pro-93 two way interface cable.....awesome

Newsgroup: rec.radio.scanner
Date: 2002-03-06 04:49:07 UTC
From: emoney250@aol.com
Message-ID: <20020305234907.13681.00001907@mb-fw.aol.com>
Source record: 51199

Boy , some people go off on a tangent to confuse themselves into thinking they are so right about.....what? I checked the verison/name of the free program I downloaded from a link on the Pro93 web site. The version says 'Win93 00.17'. That tells me it is a win93 program. Now since I accessed that download from the Pro93.com web site, I am not sure where I misstated myself in the original post. Is there some moron out there who couldn't figure it out eventhough I laid out the red carpet.....so they get mad and lash out at the person who posted the steps to do it (as it worked for them)? Got to wonder where these people come from.
Now, before spatting off, go to Pro93.com, then click on link to download freeware for scanner, after unzipping/loading freeware in PC, open program, in upper right hand will be a "help" option, click it and click on the 'about win93' and read the information there. It mentions some guy named Don and a web page of www.starrsoft.com/freeware. Nonetheless, I downloaded the Win93 using the Pro93 web page. Who gives a fu** where it originally came from.....the idea I was conveying to people who are looking for good tips is "Here is what I did, try it for yourself". You losers with no job and nothin better to do than post a bunch of irrelevant blah blah I have advice for. Posting this nonsense only gives negative attention to yourself (as your e-mail is posted at the top) and tells the intelligent/reasonable people out there not to waste any time reading your replies as you are troublemakers.....THE END

Taking a moment from the Fredricks catalog, criflorida@aol.com (CRIFlorida) spake thusly

>The FRG-9600 is an all-mode scanner

It's a 'communications receiver' that does limited scanning.

As I recall, it ONLY stops on an active freq for 6 seconds, then resumes scanning.

Source record: 51213
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm one of those many who are dying to get their hands on the new bc250d as soon as it is released later this year. I have a question regarding it's usability that I'm still a little shaky on.

Scenario:
Our local Police department switched over recently to a 800 MHz Motorola ASTROï¿½ SMARTNETï¿½ DIGITAL radio system.
(http://www.motorola.com/LMPS/pressreleases/CGISS0010.html)
<--- press release regarding switch over.

As far as I know from what I've read, the bc250d will pick up their communications ok, as long as it is not an encrypted signal. The press release says the Police radio system operates in both digital and analog for interconnectivity with other agencies, and I am guessing that means that it won't be encrypted, but rather basic digital modulation.
However, one of their Forensic Ident guys says the system is "encrypted".
I don't really think many of the officers were educated on the system, other then how to use it, so can I assume from the press release and common sense that he probably just confused encryption with normal trunked digital modulation?

I don't want to spend $1000 canadian on the scanner and find out it doesn't work!

Thanks in advance for your input,
Geoff Howe

Here's the deal, pinhead.

Win93 is not supposed to be available at pro93.com. He had it there
for a short time, and was told to remove it. Last time anyone who
knew what they were doing checked, it was indeed gone.

So yu got it there during the brief period of bootlegery, but by the
time you proclaimed pro93.com as the place to go for this, you were
wrong.

FWIW, if you paid attention to where Win93 actually comes from, you
could be using the updated version.

>using the Pro93 web page. Who gives a fu** where it originally came

Meaningless. You are living a delusion. You're in a thousand times greater
danger if you smoke around your kids or ever let them take off their
seatbelt! The number of child-stealers in the population is negligible.
It's really as rare as as being struck by lightning.

Source record: 51215

I had the same problem withmy Pro-43 a couple of years back. A new rubber keypad from Radio Shack solved that problem... no big deal. I only wish I would have ordered a second pad at the same time... for future use. The pad was only a few dollars (even in CDN$:-))

Peter

"Matt Brummer" <mbrummer@metc.net> wrote in message news:3C832BA2.44FD6BD8@metc.net...

Scanner buttons were not working well & most had to be pressed hard to get them to work. They were slowly improving, but in my infinite wisdom, I dis-assembeled the PRO-43 & cleaned the contacts with a pencil eraser. I thought this was an appropriate solution for the situation.
Now, none of the keys respond. The scanner comes on in scan mode & works fine, but none of the keys work. The key-lock is off.
I opened it back up & checked the wiring connections. They look to be in tact.
Any thoughts on what went wrong? Anything else I should try cleaning the board or contacts with?
Thanks! --Matt

250. New Scanner User Questions

Newsgroup: rec.radio.scanner
Date: 2002-03-06 12:53:38 UTC
From: devnull105@aol.com
Message-ID: <10cad4ab.0203060453.faf5f1d@posting.google.com>
Source record: 51216

I am a brand new scanner owner. I purchased a Sportcat SC200 primarily for use at motor sporrs events. However, curiosity has gotten the better of me and I have been researching this hobby. Book resources seem to be scarce (I have searched online book retailer), and a lot of the online sources seem to be directed at people with some idea of what the hobby is about. I have some questions that I hope some of you more experienced scanner users can answer:

1- Why scan and what do you listen to? I have figured out how to do band searches and how to program the police and fire frequencies. Some interesting stuff can be found. What else is there out there to listen to?
2- The manual that came with my scanner tells me what frequency ranges are, but not examples of what I am likely to find there. Does this vary by area? Is there a source with better explanations?
3- I am looking for technical sources relating to this hobby. Preferably directed at the newbie. I am not afraid of technical content, just need to get the fundamentals down before I move on. Again, I have found it hard to find good sources on this.

Thanks

Gentlemen,
I was wondering if it might be of mutual benefit to share the frequencies loaded into one's rig. Here are mine. The ";" character is the comment marker. To ease the pain of importing to another rig's software try to post tables of fixed column width padded with the space characters only. No TAB spacing as it can make importing a pain.

Oh - YMMV - if any of the above is a pain in the arse then please just post your frequencies. I'm sure they will still be greatly appreciated.

Cheers,
Muz.

I think he ought to put the scanner in the gas can, and leave the hatch on the Colt open, as it will echo / amplify the audio and allow him to listen without the firemen knowing where it was coming from. As long as the dogs don't pee in it, of course.

I saw some yellow checkout rag claiming Brenda and David were "more" than just
neighbors.
If that's the case, then he might have used the key she gave him.
Maybe the irony of such a scenario explains why the whole thing seems to stay
hung up on continuing memorials,
as if to delay acceptance of the sordid facts.

Sill looking for the Schematic for the BC 210XW Schematic. Uniden doesn't have it and I've tried about everwhere to find one, would like the whole service manual, but I think that's impossible to find.I'm beginning to believe they never printed one. I have the BC 210XL schematic, but it's not much help, It seems there was 7 different models of it alone. I hate like hell to trash this thing, and I probably won't, It's just one of those things that BUGS a person of not getting fixed. Thanks for reading please help if you can

The good outdoor antenna system is the key to better reception of
distant or low power signals.

Your IC-R8500 will probably get less intermod interference
than the portable AR-8200 when you connect your IC-R8500 to an
outdoor antenna.

My assumption would be that it would NOT be encrypted... If it were, how would it allow for "interconnectivity with other agencies"? I can't see how it would...

By the sounds of it, being in both digital and analog, you probably wouldn't even need the digital scanner. Would sound to me that most communications would be rebroadcast in analog anyway... I'm sure there will be some that would not, but generally I would believe that most would be...

The BC-210XW was actually a Uniden model, built by
Uniden after Electra sold out. Therefore, I think
the BC-210XW circuitry would
be similar to a Uniden BC-800XLT
but without the 800 MHz front end board.

If you aren't in a very strong signal area where even the best will overload, a quality broadband amp with more gain than the loss in your cable, leaves you just as well off as you would be if the scanner were mounted right under the antenna. A top notch antenna mount amp can push 25-30 db gain at 800 Mhz. That would cover 300-500 feet of the cheapest RG-6. Even buriable RG-6 is not prohibitively expensive, compared to what you lose not having the scanner at hand.
You could mount a video camera and run video over along with the auidio,

but you still can't lock out temporary stuck mics, tones, noise that just breaks squelch or hit delay or manual on something really noisy you want to stay on...
If you insist on running the audio, for a 200 foot run you could get away with 12 to 14 guage wire (outdoor extention cords are 14 or 12), without losing too much signal power. Better way to do it is line transformers (I think radio shack still sells them). You put one at the scanner and one at the remote speaker. They raise the audio to higher impedance, higher voltage to overcome line resistance. Then you could use 20 or 22 guage lightweight wire).

Harold, I missed your original post, but I found the reply from Bob Parnass.

I have a schematic for the 210XW. I have scanned it and will attempt to
post it here. I've never tried to do this before so if something fouls up
please bear with me. I can email it to you as a jpeg if necessary.

Looking through some old posts today and found this one. Not sure if you ever found the problem or not, but you might want to take a look at C209. The original capacitor is (or should be) a .47 uF aluminum electrolytic. Try replacing that cap with a .47 uF tantalum.

It's been a while since I've done one and I can't remember all of the steps, but I remember you need to take out the four screws which hold the front of the scanner to the rest of the chassis. Seems there are a couple of plugs that need to be unplugged (EASY!) from the main circuit board. Once you get the front part of the scanner off, remove the screws holding the microprocessor board (the rectangular board with one corner notched out). C409 is located toward the bottom of the board (in the notched corner) in about the 7:00 position as you are looking straight on from the component side. I'm not 100% sure that cap will affect memory, but I believe it does. Another symptom, when that cap fails, is that the scanner sometimes is delayed powering up when you first turn it on. In other words, you turn the scanner on and nothing happens. The scanner eventually powers up after a period of time, ranging from a few seconds to minutes. Hope this helps. If you run into any problems with this repair you can email me by removing the obvious..... ***nospamcthirty7@hotmail.comnospam***

>Good. So you just go ahead and ignore your kids (which you don't have anyway
>or you wouldn't be saying that crap)

Wow. What a string of completely illogical reaction and assertion.
I happen to share the earlier post's viewpoint. Mainly, concern is different than panic, and responsibility is not the same as hysteria.
HOW does that opinion prove or disprove the fact that I have children, hhmm?
Also, how does having such an opinion equate to ignoring my children?
Being a scanner enthusiast, I'm quite aware of the level of safety and crime in my environment, and while I would CERTAINLY lay down my life for my children, I am not about to go fearfully prying and peeking into every corner of their lives and playgrounds to find potential dangers, when real dangers are far more prevalent and obvious, and therefore far easier to avoid and correct.
As a parent I can most assuredly sympathize with the concept of preservation of my child's well-being, to the point of paranoia. It's natural for loving parents to be watchdogs at all times, and that's as it should be. But at what point does concern over strangers and molestors become not letting then climb trees or stay at a friend's house overnight? There are a million ways for people, including children, to be hurt or killed, and there's not a whole hell of a lot that any parent, no matter how responsible or caring, can do about it.
Linus

Hi Everyone,

I have been scanning for over 20 years in and around the Los Angeles area. But took off about 4 years, I recently returned to find out that the LAPD frequencies went digital on me.

My question to any scanner nut, like myself is....What the frequencies for the LAPD all of you are listening to? OR Point me in the direction of a website that would tell me a good set-up for my scanner.

thanx in advance,
Mike

Hi, Michael:

Bottom line: You're pretty much screwed.

You can still listen to the old Tac 1 on 154.830 for hot shot dispatches and other stuff, but forget about routine stuff in your own division.

Every once in a while, you can hear some air to ground units on 484.4375.

For audio only, I use a set of 900 MHz wireless speakers. Since these speakers are stereo, I couple the two RCA jacks on the scanner end into one jack and plug that into the scanner.

Obviously this doesn't help with the display, but by purchasing a set of these, you also get two speakers, so you can put them in two different locations, and each one of them has it's own volume control.

Good Luck

> trunked digital modulation?

That's not a valid assumption. There's no reason to believe the system isn't encrypted. Many police agencies do that. Here in Michigan, most State Police transmissions are in the "digital" clear but detectives & vice are encrypted. You can hope that only a few groups of yours are encrypted.

how

Because the other agencies probably have the decryption key, or they use a
separate non-encrypted group.

> By the sounds of it, being in both digital and analog, you probably
wouldn't
> even need the digital scanner. Would sound to me that most communications
> would be rebroadcast in analog anyway... I'm sure there will be some that

One more website for frequencies in your area.. Really logical..lol
http://gullfoss2.fcc.gov/reports/index.cfm
The FCC's database.. you can search by State, County, Type of use (Public Service, sports, air, railroad), or frequency...

Police Call is an excellent source of information for newbies also.. As for what you can listen to, the skies the limit...
pat.

I have a NIB PRO-2006, and am interested in offers over $350.00 and will accept the best offer. I paid over $350 for this scanner and have the original receipt. This is the best scanner ever made. I purchase this 2006 about 8 years ago and it has only been out of the box for 5 minutes to ensure that it functioned properly. This is your chance to get a real new in box PRO-2006. I am in Southern California if anyone would like to see the scanner in person.

Thanks,

-jim

The best way to protect your kids is to expose them to the truth and stand
back. They're smarter than you trying to keep them ignorant can ever be
effective. Expose them to sex at home and talk about everything and they
will know how to avoid people who might be dangerous, and all entirely
without you even worrying about it.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1337162020

This auction is for a Radio Shack Pro-90 300 channel handheld trunking scanner. It is a 9.5 out of 10 physically due to a few very minor scratches. It has been used only in my shack, a non-smoking environment. I am selling it to get money for a dual-trunking base scanner. It has never been opened and comes with the charger and orignal antenna. You can view complete details on this scanner at http://www.radioshack.com/searchplus.asp?type=ALL&find=pro-90#. The manual is also available there in PDF format.

This item is NOT sold "as-is". It is guarenteed to work when shipped and will arrive in that condition, unless damaged or abused by the shipping company. Insurance is REQUIRED to ensure that the buyer does not lose any money.

You WILL NOT find Win93 or a link to Win93, any version, at
www.pro93.com.

The owner of pro93.com included it, without permission, in his ZIP
file for a brief period at the beginning of February. He was asked to
remove Win93 from his web site on February 7, and he did so.

Please do not tell people to look for Win93 at pro93.com. Such
information will merely frustrate the people you're trying to help.

The correct place to find Win93 is:
http://www.starrsoft.com/freeware/Win93/index.html.

>win93' and read the information there.

Go try those steps yourself. Make sure you purge your browser's cache
or history first (to ensure that you're actually downloading the
"current" version of the ZIP file from the web site. Win93 is NOT
there. It hasn't been since February 7, 2002.

>The version says 'Win93 00.17'

Version 00.17 was created on February 21, 2002. The CAB file that is
embedded in the ZIP file on pro93.com is dated January 18, 2002. The
owner of pro93.com has reverted his distribution to a point BEFORE he
included Win93. (The initial release of Win93 was on February 03,
2002, well after the pro93.com CAB file was created).

>It mentions some guy named Don

That would be me.

>and a web page of www.starrsoft.com/freeware.

Actually, it mentions:
http://www.starrsoft.com/freeware/Win93/index.html

That is the ONLY official place to get Win93.

>Nonetheless, I downloaded the Win93 using the Pro93 web page.

Not recently, you didn't.

The owner of pro93.com included Win93 in his ZIP distribution on or
about February 7, 2002. On that date, I noticed the inclusion and sent
him a message asking him to remove Win93. He did so immediately. Since
February 7, 2002, Win93 has NOT been available at pro93.com.

Your persistent statement that it IS available at pro93.com will only
serve to frustrate the very people you purport to help here. On March
5, 2002, you instructed people to go to pro93.com and
download/unzip/install the software they find there. That information,
while perhaps well-meaning, is nearly a month out of date.

>Who gives a fu** where it originally came from

I certainly do. So does Ken, as he had a hand in its creation. The
"About" box you mentioned should tell you that.

Incidentally, I tried it this morning. I first removed all instances
of Win93.exe from my computer. I browsed to pro93.com and downloaded
"pro93freeware.zip" (after purging my cache and temporary files). A
2.7 MB ZIP file was downloaded. I opened that ZIP and ran the
SETUP.EXE it contains. It installed a whole bunch of stuff into my
system directory, as well as into a directory under "Program Files". I
next searched my hard drives for Win93.exe. NOT THERE.

Conclusion: Win93.exe is not available from pro93.com.

(After this test, I ran GoBack to revert my hard drives to the state
they were in before the test. I don't want all that crap in my
registry and in my system directory).

FOR SALE: UNIDEN BEARCAT BC9000-XLT Scanner.

Complete, with OPTIONAL CTCSS TONE BOARD. This models covers virtually every frequency from 25 MHz to 1300 MHz (less cellular). It receives military frequencies not found on most other scanners. You get 500 channels organized in 20 banks of 25 channels each. A VFO control (manual tuning knob) enables fast selection of memories or frequencies. TurboScan allows you to scan up to 100 channels per second and TurboSearch lets you select either 100 or 300 steps per second when searching VHF frequencies. The automatic store feature searches out active frequencies and automatically stores them for you in an available memory location. Selectable mode allows you to change the default receiving mode (AM, FM-wide or FM-narrow) to hear all the action. Advanced features include: Two Line Alpha LCD, Delay key (2 seconds), Channel Lockout, Data Skip (the scanner skips over non-voice channels), Backlight Dimmer, High Cut Audio Filter and tape recorder activation. External jacks include: BNC antenna, external speaker, line out, aux jack and DC power. The BC9000XLT comes with: AC adapter, telescopic antenna original carton and Owner's Manual. Size: 10.5x3.5x7.375 inches. Frequencies covered: 25~550MHz, 760~824MHz, 849~869MHz, and 894~1300MHz! Excellent Condition. $210.00 shipped within CONUS.

Thanks for reading....Bob

It can be tricky at times, I, myself have lost three scanners since Sep 11th.
Having said that, I have shipped about 2 dozen to the US since then as well, and all but the three got through.

WHERE in God's green Earth do you have ANY support for this idea that I don't have children?
Apparently you didn't read the rest of my post, or simply couldn't understand it.
I asked how having a differing opinion than yours, in the matter of child safety, was any kind of proof of whether one had children or not. Your reply here indicates you have no answer to my question.
If you DO have children, I suggest you get yourself some help in parenting and anxiety management... your tendency to immediately equate common sense honesty and talking to children about touchy subjects, with allowing pedophiles to hurt your children is a seriously irrational pattern, and should be corrected. It serves your children poorly. Get some help.
Linus

>

Another string of nonsensical hysterical reactions.
Take a deep breath and think for a second about how completely ridiculous your position is.
Based on your presumption here, you must also think that Steve was suggesting that the best way to teach a child to stay away from drugs is to get them hooked on heroine...
I'd hate to be in your children's shoes if that's the kind of parental knee-jerking I was being raised under.
Linus

325. Ambulance Freqs in San Jose

Hello Bill
Really to modify a 2006 it only means clipping one wire,
regards gerr1919
<SNIP>

That all depends upon which modifications you're referring to. There are (additional) hardware modifications that can do things such as increase the number of channels, etc.

Most guys who want "unblocked" scanners are interested in listening to cell phones. If you are not interested in that (in most cases it's illegal anyway) then save the money and go for an unblocked scanner. Sorry, I'm not much familiar with voice inversion.

Your misdirection helps no one. Win93 is not at pro93.com. Either you are a troll or a complete idiot.

OK. Riddle me this--I have a BC350A in my car with a Radio Shack trunk mounted antenna and it picks up AMAZINGLY on low band (it also picked up the same way when I used it in my shed). My base scanner is a BC780XLT hooked up to a Diamond D-130J antenna mounted on a mast 35 feet up on the roof of my house and it picks up low band very good, but nothing like the BC350A. Why??
I have 50 feet of RG-8/X going from the Diamond to the BC780 with one adaptor to BNC...can I loose this much signal strength? I have an amplifier hooked into it also, but this only improves VHF/UHF reception.

Well I bought the Pro93 appears to be a great scanner but I am having problems trunking. The system our city uses is Motorola II - Smart I programed the scanner for the 20+ trunking freqs and when I go to scan it does not work unless I go back to pgm>trunk>mode and switch to EDacs not Motorla. When it scans the led does have the MO at top righ line so I assume I am just misunderstadning how it works. What I am saying if I do not switch off on Mot mode ot edsac mode then it seesms to scan but ni audio unless I go back to Edsca mode.

thanks

I have a NIB PRO-2006, and am interested in offers over $350.00 and will accept the best offer. I paid over $350 for this scanner and have the original receipt. This is the best scanner ever made. I purchase this 2006 about 8 years ago and it has only been out of the box for 5 minutes to ensure that it functioned properly. This is your chance to get a real new in box PRO-2006. I am in Southern California if anyone would like to see the scanner in person.

Thanks,

-jim

Picked up in a partial trade, a like brand new BC245xlt Trunking handheld scanner. Comes with a leather carry case, two batteries, charging craddle so you can always have a battery charged up, wall and car charger.

No manual but you can find it on the net.

The extra battery and craddle is just bought last week and they are still shrinked wrapped in the package.

I don't need this. I have enough scanners already.

Price: $160 shipped COD or PrePay from Las Vegas

Nobody is faulting your desire or attempt to help others. The problem
is that the steps you recommend DO NOT WORK. Have you tried to
download Win93 from pro93.com since your first post? It isn't there.

People are getting on your case not because you are trying to help
others, but because you don't seem to accept the fact that what you
are recommending cannot possibly work.

You haven't even qualified your recommendation with a statement like
"it worked when I tried it a while back, maybe it doesn't now". If you
had ever said something like that, nobody would be giving you a hard
time (because your steps did, in fact, work for a very brief period at
the beginning of February).

All you've done is repeat the same "hey idiots - go to pro93.com and
download it and look at the Help->About info".

Anybody who follows your instructions will say "hey, this buffoon
doesn't know what he's talking about. I guess Ken, Don, and the others
were right".

Bought an HT from them a few years ago- They seemed to be a little
awkward on handling an online order, as if they never did that before
(example- no order confirmation email) but a follow-up phone call
fixed that and my order arrived complete and correct in a few days. I
would deal with them again.

My first guess, is the D130J is designed for 60-1000mHz. As such you would expect most antennas including a discone with no gain, to perform poorly at it's band edge of 50mHz let alone down to 30mHz.

Is the amplifier designed for VHF HI-UHF and not passing the VHF-Low (30-50mHz) signals well?

Remove the amplifier and see if the problem goes away.

Swapping the receivers will rule out them as a variable.

Does your car antenna have any gain at VHF-Low which would make a noticeable difference in comparison?

Does your radio have an attenuator which may be on?

Your coax loss at 50mHz and the connector should not be much more than 2 db. That should not be enough to make the remarkable difference as you are indicating.

The only known mod I found for this thing is bridging pin #1 and pin #2, anyone know how this is done? To make it from 30 channels to 80 channels. I have the schematic but not really much of an electronic guy. I assume just joining pin 1 and 2 together, by soldering them together but nothing on the boards say pin #1 and pin #2. Thanks in advance.

Just implant your children with the Digital Angel and you'll never have to
know where there at. It will also be usefull when the gov't outlaws paper
money and everyone goes to the chip. The only drawback is that they'll burn
in Hell for taking the Beast.

Greetings,

I have for sale an original Optoelectronics Optolinx interface. This is the interface that will allow computer control of the AOR-8000 portable scanner (with proper cabling - not included) as well as just about every computer controllable Icom receiver. It also has a built-in dataslicing circuit that allows it to decode various HF/VHF/UHF/800/900 digital modes including ACARS, Trunker, etc. Unit is in very good physical and excellent operating condition.

Reason for selling: No longer in use.

Price: $85.00 shipped UPS Ground US only on receipt of US POSTAL MONEY ORDER ONLY! I will provide you with the UPS tracking number when the package is enroute.

More info on the Optolinx and its capabilities can be found by clicking this link:

http://www.optoelectronics.com/optolinx.htm

Please respond to my e-mail address if interested. Thanks for reading.

Scott

Get yourself a telescopic antenna. You will be amazed at the increase in range. Radio Shack has them for around ten bucks. If you want a flexible antenna, try the Diamond brand model RH-77CA. It costs around forty dollars. You can get them at Ham Radio dealers. I have one and it has nearly doubled my receiving range.

Ah, the luxury of free software... Never saw a single one, just a bunch of "POPS"... Get yourself PopUp Killer.. Works wonders... Of course, you have to be running WinBlows to use it...

http://software.xfx.net/utilities/popupkiller/

Apparently the "project has been scrapped, however the program is still available for download...

Depends where you are. In wide open rural spaces they may never convert.
Digital doesn't cover the same range as analog and they are barely covering
costs in rural situations now. Despite the misleading ads, didgital cellular &
PCS is useless over a majority of the land area of the US.
Voice inversion "scrambling" is a matter of this question: Does anyone in
your area use it? It's really 40's technology and I am at a loss as to why
anyone would use it today but if they use it, it might make sense to add the
capability to your scanner. A lot like VHF low band equipment, it's totally
outdated but a minor annoyance they might feel the need to throw at scanner
users. I used to maintain radios for a sheriff's department that had us set the
modulation way low on their base station so that if the scanner listeners
turned up their scanners enough to hear them, then they would blast their ears
off when the city police or somebody else talked. Their cars didn't notice with
the volume way up on the county radio, because they had a separte radio for the
other frequencies. They kept it up until they got single unit scanning radios
in their cars, then they had to stop. It was all just to annoy scanner
listeners, kind of childish I thought.

Sure! Almost any aftermarket antenna would do better than the stock
antenna your hh brings. Take a look at the different reviews of
antennas that are in strongsignals.net and make your decision. In my
opinion, one of your best bet would be to buy an antenna called Watson
W889, available at http://www.durhamradio.ca/scanacc.htm#HSA or the
ant06 available at grove-ent.com

Both are telescopic antennas that can be suited to best match your
needs. All the way extended for the 108-137 band, for instance, or
just at 6" for the 800-900 mHz band.

Have fun!

Be VERY careful with those telescoping antennas...their rigidity can cause an otherwise minor drop-to-the-floor to break the innards of your scanner's antenna connection. Which can render the scanner totally useless until repaired.

Ditto on the Diamond RH-77... it is terrific. Similar to the Diamond, and just a bit bettter in my opinion, is the "CC Super Gainer" from C Crane Co at http://www.ccrane.com/scanner_antennas.asp They're excellent with customer service and returns, if necessary.

Sounds like the crap they do around here... The cars are actually really
low in modulation, and the "base" is loud... Irritates the hell out of me..
It's they are whispering, and I have to strain to hear what they are
saying... It's not that the signals are weak, and they are very strong,
just really quiet... Maybe it has something to do with the local repeater
or something... Who knows, but my guess would be what you are describing,
as they use ancient Motorola's, with I believe 3 separate radios in the
car...

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1337162020

This auction is for a Radio Shack Pro-90 300 channel handheld trunking scanner. It is a 9.5 out of 10 physically due to a few very minor scratches. It has been used only in my shack, a non-smoking environment. I am selling it to get money for a dual-trunking base scanner. It has never been opened and comes with the charger and orignal antenna. You can view complete details on this scanner at http://www.radioshack.com/searchplus.asp?type=ALL&find=pro-90#. The manual is also available there in PDF format.

This item is NOT sold "as-is". It is guarenteed to work when shipped and will arrive in that condition, unless damaged or abused by the shipping company. Insurance is REQUIRED to ensure that the buyer does not lose any money.

I have programmed all of the talk groups listed on trunkedradio.com for my county (Gwinnett, Georgia). Several of the talkgroup id's are invalid. Also, several talkgroups are used heavily on their trunking system that are not listed on trunkedradio.com. I havent been able to determine what department or service these unknown talkgroups are for. Can anyone tell me how to find this info. Following are the invalid talkgroups and the unknown(unlisted) talkgroups just in case someone here already knows.

Invalid ones from trunkedradio.com: 3475, 2690 and 2674
Unlisted but in use but unable to determine user: 9712, 3472 and 4336

Thanks

Terry

Radio Shack sells one pre assembled for $4.99. I believe it should be avalable at www.radioshack.com. Other sources would be TV antenna/distribution equipment companies that carry a full Winegard or Channel Master product line. The item you want is commonly called an "FM Trap".
It isn't rocket science to make your own, but the actual construction is more complex and exacting than the schematic would imply. To keep from cutting a lot of signal at 50mhz or at 120 Mhz, you need carefully chosen & constructed coils & circuit board design.

This being the last weekend of BikeWeek here in Daytona Beach I'll be broadcasting Live Police/Fire from now until Monday morning.

I just drove down the main drag and WOW the bikes. Officials estimate about 500,000. Talk about sites, it looks like Mardigras in New Orleans complete with woman showing bear breasts in exchange for beads..... And that was just at 5PM, wait until SunSet and I'm sure the scanner will be pretty good.

Check it out at http://www.MilAirComms.com

More likely explanation: short-field "noise cancelling" microphone in the
car -- these are still *usable* with the siren going full blast. *BUT*,
you have to be _right_on_top_ of the mic, and speak up, to get decent audio
out of it. The officers that hold it 6+" away from their mouth, and speak
casually/quietly... well that results in *low* audio out. Friend of mine
used to work in a P.D. radio shop -- had recurring problems with folks
complaining about 'bad radios', when in reality it was not using the mic right.

It's not just the government and the tax money they steal, it's their overwhelming influence in the media, particularly in the "entertainment" industry. They have systematically destroyed most of the racial roots of people of European decent in America.

They also never serve a real sentence in prison when they are caught committing a crime. Think Michael Milken, Ivan Bosky, Marc Rich and the little Long Island PR agent Lizzie Grubman who ran over 16 White people with her SUV after screaming "White trash!" before stepping on the accelerator.

That's what Jews think of White people. They think almost all of us are "White trash", though the term they like to use is "goyium" or Goys" which means "cattle". They look on us as genetic garbage that are here to serve them.

American Dissident Voices Broadcast of March 2, 2002

Jewish Hate, the Media, and the ADL
By Dr. William Pierce

Hello!

Last week I mentioned that a record company I own, Resistance Records, was attacked in an hour-long special TV program on one of Sumner Redstone's music television channels, VH1. Redstone, who was born with the name Murray Rothstein, is one of the most powerful of the Jewish media masters. He owns not only VH1, but also MTV and the CBS network. His MTV specializes in encouraging young Whites to mix with and act like Blacks. He promotes "hip hop" culture and rap music among White kids, persuading White boys to talk Black and wear baggy shorts and backward baseball caps -- and persuading teenaged White girls to have sex with Blacks. He is probably the most destructive and hate-filled of all the Jewish media bosses.

The special VH1 program to which I referred was called "Inside Hate Rock." "Hate rock" is what Redstone and his people call the music I produce and distribute. Actually there's nothing hateful at all about my music. Its purpose is to help young White people have a sense of identity and pride and purpose, all things that Redstone and company are trying to take away from them. Redstone's aim -- and the aim of the Jewish media bosses generally, whether they're in Hollywood or on Madison Avenue, is to alienate young White people, to uproot them, destroy their sense of racial identity, confuse them, make them forget their traditions and their history, and persuade them to mix with Blacks and other non-Whites. That's why Redstone promotes rap music so heavily. His ultimate aim is to destroy our people, our race. And because I'm trying to counter that with Resistance Records, he calls me a "hater"

and calls the music I produce and distribute "hate rock."

Well, in addition to music, Resistance Records also produces and distributes video games. A new game that we've just begun distributing is named Ethnic Cleansing. The kids really love it. It's selling like hotcakes. Not only was our music attacked in the VH1 special I mentioned, but our new video game also was denounced as "hateful." And then one of the most powerful and hateful Jewish pressure groups, the Anti-Defamation League of B'nai B'rith, also jumped on the bandwagon and began screaming about our new game. "It's violent!" they screamed. "It teaches children to hate!" they screamed.

Let me tell you: every video game I've seen is violent. Combat is the most common theme of video games. That was true even back in the days of the first, primitive video games, such as "Donkey Kong" and "Pac Man." Most video games today involve shooting people or hacking people up with swords or other weapons. And I'm talking about games marketed by Sumner Redstone's fellow tribesmen. I'm talking about games produced and distributed by Jewish media companies that make regular donations to the Anti-Defamation League of B'nai B'rith. The Anti-Defamation League doesn't scream about those games.

Some parents are alarmed by the high level of violence in the video games their children play, but the Anti-Defamation League isn't. Perhaps violent video games aren't good for kids. I don't really know, but they are a fact of life. Many kids spend most of their free time playing video games.

The point is that Sumner Redstone and the Anti-Defamation League think our game is "hateful" and "dangerous," but not other video games. Why is that? What's the difference?

I'll tell you: our game -- Ethnic Cleansing -- is a game designed to raise the racial consciousness of the White kids who play it. That's why Sumner Redstone and the Anti-Defamation League hate it. That's why they are screaming about it. That's why they're denouncing our game as "dangerous" and complaining about the violence in it, but they aren't complaining about other video games that are at least as violent. A game that has an American GI in the Second World War shooting Germans is OK with Sumner Redstone and the Anti-Defamation League. Likewise for a Civil War game in which Yankees and Rebels slaughter each other. They think that's fine. But our game, which involves urban guerrilla warfare between Whites and non-Whites they call "hateful" and "dangerous." In other words, it's OK for Whites to fight against each other. It's OK for Whites to kill Whites. But it's not OK for Whites to fight against non-Whites. That's taboo.

Anyway, our game, Ethnic Cleansing, is designed to break that taboo. Our game is designed to teach White kids to stick up for their own people. It's designed to help White kids shed the racial guilt and self-hatred, the sense of racial inferiority, that Sumner Redstone and the folks in the Anti-Defamation League have worked so hard to instill in them. It's

designed to help them think in terms of Whites against non-Whites instead of Whites against other Whites. That's why VH1 and the Anti-Defamation League hate it.

But, you know, we shouldn't be surprised about that. VH1 is owned by a Jew. It's a Jewish propaganda channel. The Anti-Defamation League of B'nai B'rith is a Jewish pressure group. Their aim is to destroy White racial consciousness and to break down any feeling of White solidarity. The last thing they want is for Whites to learn to stick up for themselves. So we expect them to hate us and denounce us. They have their agenda, and we have ours.

Everyone should understand that, but most people don't. The reason they don't is that all of the mass media, even those few not yet owned by Jews, collaborate to keep the Jewish agenda concealed from the public. The media routinely refer to the Anti-Defamation League of B'nai B'rith -- and from here on I'll just call it "the ADL" for short -- they routinely refer to the ADL not as a Jewish pressure group or a Jewish propaganda organization or even as a Jewish lobbying group, but as a "human rights organization" or as a "civil rights group." Really. The media want the public to believe that the ADL is an impartial group concerned with what's good for America rather than with what's good for the Jews. In fact, most media won't even tell you that it's a Jewish organization, with strong ties to Israel.

So let me tell you a little about the ADL, and you'll understand better why they do what they do. And you'll also see a little more clearly the crookedness of virtually all of the mainstream media in America. The ADL was organized in 1913 by a group of rich Jews specifically as a response to a notorious child-rape and murder in Georgia. Leo Frank was a Jew who owned a pencil factory in Atlanta. In 1913 he raped and murdered one of his White female employees, 14-year-old Mary Phagan. He was tried, convicted, and sentenced to death. The governor of Georgia, in response to Jewish lobbying -- and, most believe, in response to a large Jewish bribe -- almost immediately commuted the death sentence. Angry Georgians then seized the Jewish child-rapist and murderer and hanged him.

The Frank case was widely reported in Georgia newspapers in great detail and caused much hostile feeling against Jews. The purpose of the ADL was to deal with such matters in the future by attacking and attempting to discredit anyone opposed to Jews or Jewish policies, by generating pro-Jewish propaganda, and by exerting influence on legislators and other public officials in a more discreet manner than the rather clumsy way in which the Georgia governor had been persuaded to commute the death sentence of Leo Frank. After the formation of the state of Israel in 1948 lobbying for military and financial aid for Israel also became a major ADL activity.

The ADL still does all of those things today, and in my case the group's principal activity has been attacking me and attempting to discredit me. In fact, the ADL devotes so much of its effort to attempts to discredit anyone who opposes Jewish policies that it is known in some quarters as

"the Defamation League." The ADL regularly refers to me as a "terrorist" and claims that I am "linked" not only to various terrorist acts, such as the Oklahoma City bombing, but also to bank robberies, murders, and other acts of criminal violence. For example, my "link" to the Oklahoma City bombing is that Tim McVeigh, whom I didn't even know existed until I saw him on television after he was arrested -- Tim McVeigh is said to have read and been fond of a novel I wrote 27 years ago, The Turner Diaries. The other so-called "links" are even more tenuous. And yet the mainstream media regularly quote the ADL in saying that I am "linked" to terrorist and criminal activity, and they describe the ADL almost as if it were an official source of information.

So let me tell you: I have never been involved in any terrorist or criminal activity of any sort. But the ADL has. In November 1992, after confidential police files were stolen from the San Francisco Police Department, an investigation was begun that led eventually to search warrants being issued. On April 8, 1993, both the San Francisco and the Los Angeles offices of the ADL were searched by police teams armed with these warrants, and more than 12,000 stolen confidential police files were recovered. Most of these confidential police files didn't have anything to do with criminal activity but instead contained personal information on individuals collected by the police in connection with driver's license applications, pistol permits, security clearances, and other routine matters. What the individuals in all of these police files had in common is that the ADL considered them "enemies" because they had at one time or another, in some way, opposed some Jewish policy or some Jewish interest. Some of the individuals in the stolen files were legislators or other public officials that the ADL wanted to bring pressure against.

Other criminal activity by the ADL in addition to the possession of the stolen police files also came to light in 1993. A San Francisco Police Department inspector, Tom Gerrard, who had been receiving payments by the ADL to steal the files for them, fled to the Philippines to avoid prosecution. And evidence was found during the search of the ADL's San Francisco and Los Angeles offices that the same sort of bribery, corruption of police agencies, and illegal collection of confidential police files was occurring in New York, Washington, Chicago, St. Louis, and Atlanta.

Unfortunately, the ADL already had corrupted the judicial system in California to the point that it was able to stifle further law enforcement action, and very shortly thereafter the mass media in California, which initially had given substantial coverage to the case, were persuaded to drop the matter as well.

Some of the individuals whose confidential files had been stolen by the ADL were not ready to drop the matter, however, and they filed civil suits against the ADL for invasion of their privacy. With the enormous resources of organized Jewry behind it the ADL fought these lawsuits tenaciously, appealing every adverse decision. Finally, however, after

nine years in the courts, the ADL last week paid damages of $178,000 to the last three victims of its illegal spying. I'm sure that you didn't see anything about that in the news last week, because after the initial publicity back in 1993 the mainstream media have ignored the case. They continue to refer with respect to the ADL as a "human rights organization," with never a mention of its criminal activity. And they continue to quote the ADL's hints and suggestions and insinuations that I am somehow "linked" to terrorist and criminal activity. It is, of course, the ADL, not I, who is engaged in criminal activity, but you would never know that if your source of information is the mainstream media. For those listeners who have access to good reference sources, however, find yourself a copy of the Los Angeles Times from April 9, 1993, and read all about it.

Actually, the ADL's stealing of police files is the least of its criminal activities. It just happens to be one activity where the group made a slip and got exposed momentarily. Far more serious are the ADL's links to organized crime: to the Jewish master swindler Marc Rich, for example, or to the Jewish gang boss Moe Dalitz. If you were following the news closely in January of last year, when Bill Clinton, just hours before leaving the White House, issued a number of pardons for criminals, an inordinately large percentage of whom were Jews, you will perhaps remember the controversy around his pardon for Marc Rich. Rich is a billionaire international commodities trader. He was indicted on a large number of criminal charges, including wire fraud and money laundering, before fleeing the country to avoid prosecution. He has given huge sums from his ill-gotten loot to Israel and to the ADL. The ADL chairman, Abe Foxman, wrote to Clinton specifically requesting a pardon for Rich -- and of course, Rich got his pardon.

Moe Dalitz was the boss of Detroit's all-Jewish "Purple Gang," which got its start smuggling illegal whiskey into the country and then branched out into White slavery, loan-sharking, illegal gambling, and contract murder. After the Second World War Dalitz moved into the casino business in Las Vegas and eventually became the leading gang boss there. And he gave generously to the ADL and other Jewish organizations. He was one of the ADL's biggest donors during the 1970s and early 1980s. The ADL reciprocated by presenting Dalitz with its annual "Torch of Liberty" award at a formal dinner in his honor in Las Vegas in 1985. Dalitz and seven other gangsters were killed in a gang shootout shortly thereafter.

What's important is not that the ADL consorts with gangsters and engages in criminal activity. What's important is that the news media conceal that from the public and treat the ADL as a respectable "human rights organization" that can be relied on for accurate information about people like me -- or about anyone the Jews consider an obstacle to their policies. That's bad. That's very bad, and it's dangerous -- and not just because it misinforms the public about people like me. It's dangerous because it allows the ADL to represent itself as an authority. It gives the ADL much more power to corrupt.

It was bad enough when Jewish groups had only their money to bribe politicians and judges and law-enforcement officials, as in the days of Leo Frank. But now, with the collusion of the mass media, the ADL is able to wear a false cloak of authority. And the unfortunate fact is that whenever a military or law-enforcement person sees someone wearing a cloak of authority, his tendency is to salute and wait for orders. Most of us have at least a bit of an authoritarian streak in us, and I don't think that's necessarily a bad thing. Military and law-enforcement people, on the average, have a much bigger streak of authoritarianism in their personalities, and that's not necessarily a bad thing either. But when the ADL uses its false cloak of authority to influence America's legislative, judicial, military, and law-enforcement establishments, that's a very bad thing -- and very dangerous for the freedom and even for the survival of our people.

And in fact, the ADL is using the false cloak of authority bestowed on it by the mass media to cozy up to and corrupt military and law-enforcement people all across America. The Jewish mass media have prepared the ground by talking so much about "hate crimes" and "hate speech" that they have convinced large segments of the public that any printed material or public statement that is not Politically Correct is "hate." Anything I publish, for example, is automatically labeled as "hate" by the media. If I criticize America's insane immigration policy, the media will call that "hate." If I complain about the government's policy of putting Israel's interests ahead of America's interests in the Middle East, that's "hate" too. I could publish a book on bicycle repair, and the Jewish media would call it "hate." The media have the public sensitized to that word -- and they've done that deliberately. And they have the more simpleminded elements of the public convinced that there's something illegal about publishing or distributing anything the media have labeled as "hate."

If, for example, members of my organization, the National Alliance, distribute leaflets calling for a halt to immigration from the Third World -- or even demanding that the government enforce the immigration laws it already has by stopping illegal aliens from coming across our southern border -- the media invariably will use the word "hate" in every other sentence in reporting our distribution. And then some of the simpletons will call the local police or the FBI to report that our leaflets were left on their front porches, believing that a crime has been committed.

All of that is bad enough. But then somebody from the local office of the ADL will approach the local police chief and offer the ADL's help as an authority on "hate" and "extremism." "We will explain to you how to recognize 'hate crimes' and 'speech crimes,'" the ADL will say. "We will teach your officers who the haters are, and we will explain why you should keep an eye on them and harass them and arrest them whenever you can."

Ordinarily any self-respecting police chief would resent someone like that telling him how to do his job. He would tell the ADL busybody to

buzz off -- especially if he knows that the organization offering its advice is a criminal organization. But usually he doesn't know that, because the media have kept that a secret. Usually he thinks that the ADL is an authority, almost with an official status, because the media deliberately have created that impression. And so the ADL is able to worm its way into local law enforcement and exert its destructive influence on the way the law is enforced. In many cases it is able to persuade the police to violate the civil rights of people it doesn't like. For the police to let the ADL tell them how to recognize and treat so-called "haters" is like the police going to the Mafia and seeking advice on how to deal with organized crime.

And the ADL does the same thing with our armed forces. It's like having the Pentagon hiring active, practicing al-Quaeda members to teach the military about terrorism and how to recognize a terrorist. It sounds crazy, but we actually have the greasiest of Jews whispering into the ears of police and military officials all over America, telling them how they should do their jobs. We actually have such Jews with ADL connections installed in offices in the Pentagon, in the White House, and in the Justice Department.

That's a bad situation. Like many other bad situations in America today it has arisen directly from the Jewish control of the mass media.

What can we do about it? Well, you know what I'm doing. I'm building alternative media as fast as I can to counter the Jewish media. I'm happy to have your support for my work.

Here's something else you can do. If you know anyone in law enforcement, ask him whether or not his department has been approached by the ADL or has hired the ADL to give training of any sort to the personnel in his department or whether or not any ADL propaganda has been circulating among members of his department. If his department has had any contact at all with the ADL, tell him what you know. Tell him that you are alarmed and outraged that his department is involved with a criminal, anti-American organization that is working to undermine our Bill of Rights and destroy our Constitution. Get him to help you spread this information to other members of his department.

Thanks for being with me again today.

What makes a talkgroup ID "invalid"?

Maybe there is just very little routine traffic?

3475 and 3472 are so close they would most likely be part of the same
agency.

Walt

```

They had those good old Motorola back noise cancelling mics in the cars, which is what gave them the idea of cutting back the repeater deviation a bit. They got complaints from scanner listeners that their cars were too quiet when the new Micor radios were installed. You know how small towns are, the little old ladies just picked up the phone and called in to complain! So the sheriff got the idea of making it worse for the scanner crowd by turning down the repeater deviation a bit. MIcors have plenty of extra audio gain to compensate and on the base you can compensate in the console module so it sounds just like the other modules. When I was installing the radios, they had a big sheet metal console fabricated to mount 3 control heads, 3 mics, a CB, a siren, light controls, flashlight mounts & whatever else the individual officers wanted crammed onto it.
In my experience working on them the integibility of a weak signal is better with the deviation down around 3.5-4.0 Kc & the audio in the system cranked up a bit.

As far as unblocked goes - don't bother. Unless you enjoy listening to brief snippets of conversations. "Honey, pick up a gallon of milk on your way home." "Yes dear".

Of course that's just my opinion....

What scanner has the least amount of ch's but would still have ctcss capabilities. I might be looking for a cheap scanner, but the town is small and is run by the OPP. So I need ctcss capabilites.

Not much other than that. The fire dept's are csq and ambulance ya can get away with not having ctcss, but it's the policing for the region that has it.

help on this would be great.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

Paul,
Thanks for the explanation and for your courtesy. Fort Bliss is located adjacent to El Paso, Tx, in far west tx. It is also located near White Sand Missile Range and McGregor Test Range and Biggs Army Airfield. All of which are in the proximity of Southern New Mexico and Far West Texas.

just an observation.....I was looking at a display model of the Pro-2053 (the base model of the Pro-93) and when I checked the firmware version (turn unit on and press "3" while display reads 'Welcome to Dual Trunking'), I believe it read Version 3.00 or 3.01. Would this be different because it is a base unit?

Based on what win93 says when i try to input the "invalid" ones, it is because they aren't divisible evenly by 16.

Maybe the 3475 was meant to be 3472. Thanks.

Terry

I'm looking for a mod equivalent to Gwiz to douse scan defeat tones on
our local GE/Erickson EDACS system.
Anyone know anything that will work with the bc245xlt? Or even
techniques that will bypass it?
I've heard there's supposed to be a bunch of options out there but my
internet searches are coming up empty. Is g/wiz the only one? (if
they're even still in business).

Thanks,
Geoff.

This is the kind of fucking stupidity you get from reading those stupid
funnybooks like the fucking bible or whatnot that were written by
semi-illiterate sheepfuckers who didn't know the world was round!

These morons used to tell us that travel at more than 20 mph would make us
die or go crazy, and that flying on airplanes was impossible or would
invariably send us right to hell. These are the people who were sure the
world was ending at least 50 times in the last 500 years! They're crazy, or,
if they aren't, nobody will ever know WHEN they aren't being crazy, so just
fucking ignore them!

We're going to have "bone-phones" embedded in our skulls shortly, and we'll
be able to call each other anywhere. This will make people being lost or
disappearing a thing of the past while granting kids a degree of freedom
not to have to report constantly to be assured of being safe. You won't
even know who's talking to anyone else. It will become totally silent and
it won't be your business, just like it is now as to who's on call waiting
on the other end while you're talking to someone unless they tell you or
connect you on three-way.

What systems are you planning on listening to MOT,EDAC,LTR? Conventional or trunking?
Do you want a base or handheld unit?
Would you want to program it by a PC?
Do you want/need text tags for trunking id groups?

Get ahold of Scannermaster.\Terry Brennan is still doing the Gwhiz board and
yes it will work with a 245 Wait I missed something you will NOT have the anti
scanner tones with a 245 you must not have it programmed right?

>Yep firmware 1.03 is the latest not 1.02
>

For some reason, there never was a 1.02. I don't believe anyone has figured out the difference between 1.01 and 1.03.

PRO-93's with 1.01 or 1.03 have actually been around for some time. It's just been a matter of finding one among the 1.00's that are still in stock - or have been swapped for 1.01/3. The bigger news is that a 1.00 owner has reported on the Yahoo! group that he's about to get his radio back with the upgrade. That means that 1.00 owners who need it will be taken care of without having to hunt and swap.

BTW - I see Eric G has blown it by referring to a 2053 with 3.00 or 3.01. He really had several of us going with his pro93.com-Win93 thread. But the 3.00/3.01 thing is just too big a gag to put over on anyone. Too bad, Eric - you're just no Emilio.

My radio is 3.01. My friend didn't believe it so I told him to come over and look for himself. He said i had the radio upside down. We turned it over and now all the channels match what is in Police Call. It don't pick up the digital channels the cops use anymore so i am gonna put it back the way it was.

Just a quick note...

Frank Bals recently advertised a Pro-2004 for sale in the group, and I emailed him expressing interest. We haggled a bit on the price and came to an agreement, and I purchased the scanner. It arrived well in time and was packaged quite well. It is a beautiful scanner, is in fine shape, and works quite well. Frank thew in a couple of antennas. He also continues to email me, following up on the sale, offering to answer any questions, and making sure that I am satisfied. Well, I am satisfied. The scanner is great (picking up all sorts of things that my Pro-79 can't get) and dealing with Frank was painless.

So just a note for the archive servers for future readers, anyone wondering about dealing with Frank Bals need not worry, he is an honest guy and does his best to make sure the buyer is satisfied.

Thanks Frank!

Firstly, I'm not a Christian. Secondly, I'm not a bigot. Thirdly, I simply asked that the beliefs of others be respected when discussing something totally unrelated to religion.

Finally, however, I refuse to take part in any of this bickering and infantile name calling and swearing... I guess I've just grown up!!!

Funny, I had the same question today! EXCEPT, I have an ICOM R2, which uses an SMA connector. Thanks to the answers to your q., I now have info about alternatives, BUT does anyone out there have any experiences with this??? Many thanks.

I just purchased a used scanner from an overseas individual. It is in transit. Some of this particular model were made before the ban, others after. Do not know when this was made or if it makes a difference. I also do not know how he listed it on the customs form.

Model 3-5875A
SSB radio in great shape.Has the two antenna inputs on back.
It comes with the hand mike and I have a Turner Expander 500 desk mike.I
just got to remember where I put the desk mike.The radio is in real good
shape and works great.I just don't use it so I want it out of my way as it
takes up to much desk space for me. I will give you a personal guarrentee on
it.Let me know what you
decide.Thanks Email me.
I am interested in a triband mobile with 6 meters on it also
Make me a reasonable offer on it as I want to move it to a good home.I have
had several people interested,but no solid deal on it yet.

Why spend the money. Most scanners can be unblocked in under 5 minutes. I have a pro-2022 and an Alinco DJ-580 and both were unblocked in less then 5 minutes. If you have a scanner then you should be able to unblock it costing you nothing. I love mine and love to listen to the nuts on cell phone, (not illegal in Canada).

Oh, I guess it ain't MONEY!
The blind hatred of other's beliefs and religions has been at least as much a cause of abuse and evil in the world as the misled and misquoted religions themselves.
Go to school, get a brain and a decent vocabulary, and come back some other day.
In the meantime, the ORIGINAL topic of child safety and local crime awareness was at least mildly associated with scanner monitoring.
You've ventured into the realm of the troll.
Go bother some other goats.

Thanks Joe.

many of us will use search engines to find out the info required,but others are not sure of the net,and how to find the info,so its best to explain in detail the info required and for what area.

i often do searches on yahoogroups for UK base scanning email groups and am amazed that so many people do not explain where they are based and what they cover.

if i see in the details of the group Birmingham scanner group,i have to join as there is no mention in the details of which Birmingham ie Birmingham Alabama USA or Birmingham West Midlands UK.

if it had said that in the first place it would be easier.

regards

470. FA: Pro-90 Handheld Trunktracking scanner, LAST DAY!

Newsgroup: rec.radio.scanner
Date: 2002-03-09 23:33:37 UTC
From: vhfradiobuff@aol.com
Message-ID: <5e5fccab.0203091533.4d9c092f@posting.google.com>
Source record: 50936

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1337162020

This auction is for a Radio Shack Pro-90 300 channel handheld trunking scanner. It is a 9.5 out of 10 physically due to a few very minor scratches. It has been used only in my shack, a non-smoking environment. I am selling it to get money for a dual-trunking base scanner. It has never been opened and comes with the charger and orignal antenna. You can view complete details on this scanner at http://www.radioshack.com/searchplus.asp?type=ALL&find=pro-90#. The manual is also available there in PDF format.

This item is NOT sold "as-is". It is guarenteed to work when shipped and will arrive in that condition, unless damaged or abused by the shipping company. Insurance is REQUIRED to ensure that the buyer does not lose any money.

471. F/S Uniden BC700A scanner

Newsgroup: rec.radio.scanner

From: rob34 <rob34@infinet.com>
Message-ID: <3c8aa0eb$0$1599$4c5ecdc7@news.erinet.com>
Source record: 50937

I bought this scanner a while back in order to repair it.When it was almost new the scanner was mounted in a moble,but for some reason the metal case came in contact with circuit board.This caused a couple of foil strips to be burned off the board,I bypassed the strips with some wire and was able to get the scanner to start working again.It will pick up 806- 956 mhz,but for some reason it will not seem to receive anything below that,but it will scan it.This will make a nice project for someone has more time to mess with it.The scanner is in descent shape and I have the manual for it and the power pack,but it does not have the schematic.I am asking $30.00 for it plus shipping.There is some very minor rust spots on on one side as you can see from the pictures: http://angel-pal.tripod.com/scanner1.JPG

Yes - you can do that with a 2053. RS sells those little stick-on
feet that you can put on the top, so your desk does not get scratched.

A friend tried it with his 93. Unfortunately, the belt clip is
one-way, as is gravity. We'll have to try something else when it gets
back from the shop.

Source record: 50941

Hi everyone.

I'm in NZ and was wondering whether a Uniden 780XLT will pick up a Tait
trunking network.

I think it is a E2 UHF type II network. When scanning with my 120XLT i pick up these radios
between 414-418Mhz, other 'tone' signals
can
also be heard in this range. I don't know to much about trunking so was wondering if I
spent the money on a 780XLT scanner will I
be able to trunk this network. Also what other info do I need to find out.

Thanks in advance
George

Thanks for the urls. ScanMan too!!

I've been monitoring the 856.4375 and 857.4375 freqs and there's definitely a lot of traffic on them so these seem to be exactly what I've been looking for. Too bad they're in the 8xx range because I'd like to be able to listen in on my car radio too (which is a Kenwood TM-D700 with the extended range mod applied). But the Kenwood's only good for the UHF and VHF freqs. But my home unit picks them up fine.

Regards,
Dave

I recommend that you first try to discover what kind of (so called)
MDTs you plan to decode. The only currently available software
(on the web) is used to decode the MDC-4800 type of MDT.
The VAST majority of people that want to decode MDTs
waste many manhours just to give up in utter fustration.
You can avoid this problem with this simple information.
Very few metro areas , in the USA , still use the old MDC-4800
protocol MDT encoding. There are some , but they are far and few
in between.
First , it's best to confirm that you do not have MDT systems (
locally) that are on digital trunking systems (like L.A. , NYC,
D.C., Dallas , Miami, and many more.) , or MDTs that use the newer
, more current , types of encoding ..and there are several.
If you have ANY other systems than the old 4800 encoding types
, forget it ... with your current equipment. (you can buy MDTs on
ebay in the $1100 to $1600 range , used , that will work on many
modern systems.)

To confirm if you have decodeable MDTs .. find and listen to your
local MDT systems. Check the way they sound against the sound files
of MDC- 4800 systems ... found on many of the web scanner sites.
(check in Google for the sound files) If you can confirm that they
are the 4800 types (highly unlikely) then you can use mdtmonitor
to decode them. If they are NOT like the scanner site sound bites (
highly probable) ... then forget it .. or buy a decoder on ebay ..!

Most users of MDTs do not want people to eavesdrop on them.
Because this is true ..these people have gone to great (and usually
expensive) lengths to prevent their signals from being intercepted.
(these days) There are VERY few people , in the USA these days ,
that can still intercept MDTs sucessfully. The smartest approach is
to discover if it is possible (in your area) at all. Identify the
type of MDT you have , locally , ... it's easy to do and will save a
" ton of agony " ...! If you can identify 4800s , you're home free.
If they aren't 4800s ... forget it. Plain and simple. All you need is
to listen to your local MDTs and compare them to sound files , to
know if you have any chance to succeed.

I've been going through their website and its listed as a "MPT Trunked Network"
http://www.taitworld.com/index.cfm/11,160,32,html

Never heard of this before.

The local WALMART uses FRS radios now. They used to use the red dot/blue dot/green dot type radios. Taco Bell and Burger King use 460-470MHZ. You can find the fast food freqs on the web.

http://www.telegraph.co.uk/news/main.jhtml?xml=/news/2002/03/07/wspy07.xml&sShee
t=/news/2002/03/07/ixworld.html

Like the "hippie" of the '60s, the white nigger is a complete
consumer package -- the expensive-to-buy, cheap-to-make sweatshop
clothes from the perennial Jewish "rag trade," as Jews call it, the
"music" and gang movies that pour billions of White dollars into
outstretched Jewish hands. It's called "disposable income" for a
reason -- money that Whites are throwing away. Let's not forget the
made-in-Israel, smuggled-by-Hasids "Ecstasy" pills made to dissolve
individuals into one great big sweating touchy-feely, aracial mass,
twitching and jumping on the floor of a Jew-owned night club as the
silly lights flash and the cash register rings frantically. Five
dollars for a small bottle of water! Such a business....!! Jews need
rakes to pull in your money, White boy.

With the clothing and the noise and the stupid behavior come the
stupid attitudes, the self-destructiveness and self-hatred, the
Jewish poison spooned down us. Concidentally, I looked up from
writing this to see a Frontline special on PBS titled The Merchants
of Cool about precisely this subject.

Typically, a program such as this can go on for hours showing us one
hooked nose after another, subjecting us to one abrasive Jewish voice
after another directing, inventing, promoting, selling, researching
-- and never once use the word "Jew."

The Merchants of Cool showed us how the current niggerization of
youth, the coarsening, the dumbing-down, the filth, violence, and sex
are all products of the same mega-Jewish "entertainment"

corporations. One character on Murray Rothstein's ("Sumner Redstone") MTV is "The Mook," Tom Green, who specializes in idiotic behavior, vomiting on cue, striking himself in the crotch with a stick, waving his rear end back and forth while walking on a table. In one scene, "Mook" goes "poo diving." He dons flippers, face mask, and snorkel, and leaps into achurning brown tank of sewage at a treatment plant.

One finds oneself cheering on the possibility of hepatitis, TB, meningitis, flesh-eating staph. Go, microbes!

The show whined that the poor teens are "trying to invent their own culture, all to themselves," but that the "greedy corporations" keep taking it from them and "commercializing" it. In the first place, children have never created and run their own culture. In healthy, racially homogeneous nation-states, there can be continuity, with several generations living under one roof and children learning from parents and grandparents. Normal human life flows as a continuum; it does not progress in a series of Jew-driven commercial jerks with new clothes, new "music," new "causes" every ten years. Old and young are not each other's enemies.

Secondly, there is no low point beyond which Jews will not go. The program showed how teens have become louder and louder, more and more vulgar and obscene, with "rage rock," desparately trying to swear loud enough and act repellent enough and paint themselves weirdly enough that "society will leave them alone." It showed how the loudest and filthiest of teen bands one day...was appearing on MTV the next.

Kids, it isn't possible. You can't out-dirty a Jew. No matter what you do, Jews will eagerly scoop up your filth, package it, and sell it back to you.

While White teens watch 15 hours or more of "professional wrestling" every week, lumbering around wearing convict headrags, biker boots, and carrying baseball bats wrapped in barbed wire and injuring each other in after-school fights based on the contrived nonsense they see on TV, Jewish kids are studying like mad to ace their SATs to ensure that they end up hiring these Whites to mop floors in a few years. Get ready to serve a sharp little Jewish boss, White boy -- if he'll have you at all. The Mexicans and other aliens Jews are flooding our country with work a lot cheaper than you do.

Hip-Hop White Boy, you're a hip-hop sucker. While you slide down someone's expensive railing on your skateboard (that you bought from a Jew) and then split your head open on the cement, and stagger around saying "Oh wow, oh wow," Jews are banding together to take over entire towns, stealing money and fiddling with the census figures so that taxpayers will support segregated Hebrew schools where Jewish kids can learn WITHOUT HAVING TO SIT NEXT TO IDIOTS LIKE YOU.

You can't out-dirty a Jew -- but you can outsmart him. If you'll listen to the older White men the Jews are trying so hard to make you hate, we'll tell you how to do it. We're not like Jews -- we have nothing to sell you. We will give you a future, though.

Want to have your own culture? Then do so. Reject the Jew, the criminal nigger, the alien.

White culture is the greatest culture the world has ever known. Proof? Look at that stupid TV (that Whites invented). LOOK at it. The whole world is wearing blue jeans and T-shirts and sneakers and ball caps and carrying handy little backpacks, or wearing business suits and shirts and ties. Everyone wants a car and an air conditioner and a refrigerator and a computer...all White inventions of the last few centuries in the greatest upsurge of technological innovation ever seen. The whole world wants to have what we've built; all the blacks and Chinese and Mexicans put together did not do, could not do in 10,000 years what we've done in 100.

Don't buy expensive, silly clothes made for pennies in Jew-run foreign sweatshops. Don't buy music, support causes, or watch programs that teach you to hate yourself, your family, and your race. If you want to rebel, REBEL AGAINST THE JEW WHO CONTROLS YOU, right down to the clothes on your back, everything you're taught in school, and everything you're allowed to see, read, hear, and buy.

Many of your parents are also victims of what Jews have done to our society; they are often as confused as you are, as full of self-hate -- as the rebel, you may have to lead the way in your family. Do everything that Jews don't want you to do! Stay away from booze, drugs, and promiscuous sex. Dress simply, be kind and respectful. "Please," "Thank you," and "I'm sorry" do not mean weakness, and they will be repaid many times over. Did a Jew ever tell you to cultivate spirituality in yourself, to learn the value of cleanliness, quiet, and order? Learn to use tools, to live and find your way in the outdoors, to fix and make and grow things; let the fools run to the mall and spend all their money on nigger CDs and makeup and baggy clothes. If your parents won't or can't teach you these things, get books and teach yourself and your friends.

Jews aren't cool. They're parasites, manipulators, speculators, middlemen who live by buying and selling the work of others. We don't need them for anything. Niggers aren't cool either. Niggers know how to break bottles and make gang signs and pee in other people's hallways. I'm a middle-aged White guy. I'm cool.

I don't smoke. I don't drink. I don't do drugs. I'm normal, not queer, and I don't screw around. I don't gamble. I don't hang around dangerous places with stupid people. I don't waste money on Jew-pushed, foreign-made consumer junk. That's why I don't have cancer or cirrhosis or AIDS or huge emergency room bills. I don't have lawyers after me for child support and collection agencies after me for

unpaid bills and loan sharks after me for gambling debts and drug dealers ringing my bell wanting their money.

I don't have a hangover or a system full of toxic, made-from-God-knows-what drug residue to get rid of. I exercise, walk, run, ride bikes. In the winter, too. Niggers laugh at me -- from heated buses. Can't catch me. When they're doubled over gasping and puking up McDonald's and KFC, I'm fine, good for another twenty miles. I don't eat that stuff. When niggers are crying about cold, bundled up in their huge down "Starter jackets," I'm wearing shorts. White people are hard, fast, strong, tough, resilient. Don't let TV-Jews tell you any different or put you down. Niggers just play basketball -- Whites invented it.

I don't sit and watch other people do things on TV. I do things for myself. I know how to put a computer together and how to sleep outside, how to build a fallout shelter, how to kill and cook a rabbit. I can make a camera from scratch and take pictures with it and develop the pictures. I can not only take the pictures, but I can write and edit the whole magazine and run the printing press. I can build radio equipment. I can run almost anything in a machine shop, and make almost any kind of tool, often from discarded junk. I know how to use microscopes and Geiger counters and welding torches. As SF writer Heinlein said, "Specialization is for insects."

I am so cool that I screw caps back on fire hydrants and pick up trash from the street and call to get traffic lights fixed. I am an asset to everyone around me, and I have improved every place I've ever lived, just by being myself and doing the things that responsible White men do. What did your nigger "friends" ever do for you except borrow stuff and not return it, steal money from your parents' dresser the second they got into your house, and try to screw your sister?

I am one of the people who helps to design, build, and maintain our civilization. I'm way cooler than any finger-popping nigger ever was, and I know it. That's why I'm so quiet you hardly know I'm around. I don't need a loud car stereo or a ring in my nose -- I've got a life. You don't see me down on the corner, clutching at my genitals, shouting obscenities, and beating up parking meters. I'm at work, or at home, listening to classical music and trying to help my race by writing material like this, to try to make Whites feel good about themselves and to get them to spit up some of the Jew-poison we're soaked in day and night.

You can have a life too. Start NOW to make yourself a future; if you're going to "collect" anything, make it gold and silver coins, firearms, items of intrinsic value, not some Jew swindler's worthless baseball cards and phony autographed bats. Don't laugh at "materialism;" by the time you're 45, you'll want some money in the bank and a house in a quiet, safe area very badly. Don't throw it away on dope, on stupid clothes, at the "raves," or in living high in

some "hot area." Trust me on this.

Get a grip on your world; if you understand the past and present, you'll have an easier time shaping a future. Turn off the TV -- it is poison. Study some history -- just the recent history of America. Start with the last 50 years or so, and work back. This country has changed for the worse so much in the last few decades that it's almost unbelievable. Seek out and study census figures showing the immense racial changes that have been engineered by Jews.

Save and cherish your family history, the old photos and scrapbooks. Old people are a priceless resource. Talk to them. They can tell you what was across the street before that ugly mall was put in, how people used to live, where and how they worked. You will always be glad that you spent time with them, and you'll always remember the things they can tell you; fifty hours or fifty years of MTV contain no value at all and will be forgotten in no time. Look at maps and aerial photos on the Web, and historical pages. Try to find old books, magazines, and newspapers that will show you more accurately what American society used to be like before MTV. Many libraries have old magazines like Good Housekeeping and Popular Science on microfilm. Use these resources to challenge the crap, the Jewish-controlled lies you're being taught in school these days.

What was really wrong with The Merchants of Cool? The premise of the program was that we should calmly sit down with Jews and discuss their unparallelled destruction of White culture as the destruction continues. What was right about the show? It proved, yet again, why Jews have no place in civilized society. Thanks, PBS, for the pictures of underage girls gyrating in whipped-cream bikinis, the images of idiots vomiting on themselves and swimming in excrement, that leave no doubt as to what must be done for White culture to survive.

It's not fair to you kids, but there's a war on. We're sorry it's gotten this far, but we're working against a very powerful enemy; the Jew makes up for his tiny numbers with his tenacity and his racial cohesiveness. Jews stick together like glue, and Whites must learn to do the same.

Don't be a white nigger. Just Say No -- To Jews.

Your questions assumes that I know the model you are talking about, or
else you simply aren't being clear.

Anyway, sounds like you are doing exactly what I decided NOT to do.
Maybe you are braver, or stand to lose a lot less money, but I was
thinking about buying a unit from someone in Australia, complete
coverage, made before the ban.

But I inquired at the FCC. Got an answer directly from someone who was
personally involved in the rule making, and the answer is simple. You
cannot import anything with complete coverage, whenever it was made.

Now, if you can sneak it through, that's your business. I didn't wish to
risk confiscation, losing $2500 and probably a big fat penalty.

Vous pouvez le trouver ici. Ayez l'amusement. C'est vraiment un programme
fantasic. Je sugg�rerais d'utiliser une bonne antenne avec le PCR-1000.
L'antenne incluse n'est pas bonne.

Vous devez ?galement faire une sauvegarde du PCR1000 EEPROM. L'utilitaire de sauvegarde est ?tabli dans le programme de TalkPCR.

No the UBC780 does not support MPT1327 Trunked systems, but the
following package now supports the UBC780 to track MPT1327..:

http://www.tbsa.com.au/trunk.html

You probably need to go back and ask him if you should be in here reading all this propaganda about freedom, it is pretty much an illegal assembly and he will probably need to write you a citation on the spot. Best thing for you to do is erase your hard drive then burn the computer. It could be used as evidence you were here at your trial. Then move to China, I hear they have much better control over the law breakers over there.

Maybe I am missing something here, but that site is nothing but a display of dead links. Has been dead for months. So I guess when someone goes to the trouble to get all this information together again, and posts it for our free use, you gotta knock him for using a great interface we already know and like?

We should be thanking Brian for pointing us to a site that is not all dead links....

Often i hear to adjust a telescopic antenna to the band you are listening to
(higher, shorter, etc.)
But why then is the signal sometimes better to have it at full length than
shorter (say 800 mhz listening)?

506. Re: Handheld Antenna's question

There are LOTS of antennas out there with SMA connectors. There are also lots of sources out there for BNC to SMA adapters. A guy named Stephen Guylas offers a custom BNC to SMA adapter. Don't have an e-mail address right now. For SMA antennas try www.aesham.com.

>I'm trying to control an AOR 5000 via the pc using spectrum master.

You should also have a look at Butel's ARC5000 demo.
http://www.butel.nl/ar5000/5000soft.html
http://www.butel.nl/ar5000/5000down.html

>Do you need the actual rs232 lead from AOR.

No - any standard "straight through" RS232 cable will work (eg. modem cable). Pins 2,3,5,7, and 8 must be connected. A crosswired RS232 cable (aka null-modem/laplink/DCC cable) will NOT work. I made my own cable.
http://www.butel.nl/ar5000/5000remote.html

Make sure the radio and software use the same baud rate. 19200 is the fastest rate supported and the best one to use.

SM/setup/Communications/set 19200 and the appropriate com port/OK.
Shut down the program.

On the 5000 press FUNC, kHz, UP, UP, UP, rotate the sub VFO until you see BPS 19200 and press enter (MHz).

Restart SM.

The higher the frequency, the shorter the antenna. The lower the frequency, the longer the antenna. So for the 800MHz band, I'd say collapse it all the way. For the 29~50MHz band, go full length. The 150~450 bands, adjust somewhere in-between.

Ryan,

I ordered a scanner from Javiation a couple of months ago. If you did not choose to have it shipped EXPRESS MAIL then it will take a LONG time. I made this mistake myself. Don't go by what the page says for estimated delivery to USA. I also found that my scanner was not even shipped right away, but that it was shipped a few days later, so I was pulling my hair out thinking that it had been seized.
I can pretty much guarantee that you WILL get it from Javiation. I WOULD buy from Jonathan again. But just try to forget about it. You WILL get it in a couple of weeks or so. And next time, pick the Express Mail method, the extra money you spend is worth the lack of worry.

Tom

I will definitely second that!
It's signal rejection in the FM radio band is horrible also.
Other than my R-2, it is my favorite scanner. If I want to hear FM radio,
I'll listen to my 400PE.

We should be a little more scientific about the actual length to use. A whip adjusted to be 1/4 of the wavelength of the signals you are intending to receive would be the best, but without an antenna analyzer of some sort to check the resonant frequency, the best you can probably do is use the following formula:

1/4 wavelength in feet = 234 / freq in MHz

Multiply by 12 to get inches to make it easier to measure. Having said all of this, though, the tuning of the antenna really applies more to transmitting than receiving because an antenna that is not properly tuned to the frequency of transmission can cause excess transmit power to be reflected back into the radio, resulting in poor performance and potentially causing damage. For scanning, I find that a fully extended whip seems to do well at all frequencies commonly monitored in a handheld. You may get slightly better results for weak signals by adjusting the length, but it will depend more on the height and position of your antenna relative to the source as well as the sensitivity of your receiver.

I would say the PRO-26 is one of the WORST scanners ever made. Who cares about all that great coverage on a handheld unit if you can't hear the thing at full volume?

I am selling a Yupiteru MVT 9000 MK II hand held wide receiver, Euro version
with
NO gaps. The radio is brand new in the box with manual and all accessories.
This is the latest version of the MVT 9000.

$350.00 shipped via USPS Priority Mail, insured.

I will accept a US Postal money order or PAYPAL only.

Check my eBay feedback under OFFDAN.

E-mail if interested, or if you have any questions.

Dan

I know that you can buy them already unblocked from outside the U.S.,
but it's cheaper to buy it in the U.S. I just thought that if anyone
could tell me how to unblock the cell freqs, that I could save some
money.

What I would like to know is if the VHF-HI section is prone to intermod as
the 2067 is. I have the latter and HAVE TO use the attenuator in order to
be able to listen to VHF-HI.

A LOT! When I worked at a Radio Store (www.ccrane.com) from about
1994-1998, we'd get calls from all over the country for that radio.
There weren't any new ones out, but we'd always take them as
trade-ins... easily got $200 -$300 even then. Great radio, even though
it doesn't have some of today's bells & whistles.

take a look at the STARTING prices on Ebay for example, see
< http://makeashorterlink.com/?O18B2138 >... then click on "watch this
item" and check back in a few days to see what they sold for...

Amateur Radio Newsline™ Report 1282 – March 8, 2002

Amateur Radio Newsline report number 1282 with a release date of
Friday, March 8th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The Dayton Hamvention announces the EMMY AND OSCARS of Amateur Radio. We have the winners on Amateur Radio Newsline report number 1282 coming your war right now.

(Billboard Cart Here)

**

HAMVENTION 2002: AWARD WINNERS NAMED

The Dayton Hamvention has named Radio Amateur Information Network founder Alanson “Hap” Holly, KC9RP, as its 2002 Radio Amateur of the Year. Holly received the news of his selection on Thursday evening February 28th in a phone call from Cathi Hoskins, N8ZCQ, who chairs the Hamvention Awards and Banquet Committee. KC9RP tells Amateur Radio Newsline that he was completely taken by surprise:

--
Holly KC9RP: “I was absolutely stunned! In fact, all I could say was me? I mean seriously, I was just absolutely floored.”
--

Holly, lives in Des Plaines Illinois has been licensed since 1965. He began his ham radio informational programming career in 1984 on a local Chicago Area repeater. This eventually lead him to become founder, moderator and guiding light of a weekly amateur radio audio feature magazine known as the RAIN Report.

--
Sample audio from Rain Report.
--

RAIN programming is distributed to hundreds of repeaters across the country via a telephone dial-up line, the rainreport.com website, by a subscription tape service and broadcast over W-A-Zero-R-C-R's weekly 160 meter informational net.

But that’s is only a small part of the Hap Holly story. Originally licensed in Escondido California at age 14, Holly who has been blind since age 7 served as a phone-patch station and net control for the famed WESTCARS traffic net until 1970. He then headed off to Principia College in Illinois and from 1970 to graduation in 1974, ran phone patches and kept radio schedules for many of

his fellow students.

Holly graduated Principia with a Bachelor of Arts degree in Sociology, and soon found himself in the Chicago area. There, he sought out world-class jazz accordionist Leon Sash, to pursue further training in music. As a professional keyboard player, Holly’s diverse repertoire of American music of the past six decades has made him a popular choice in the Chicago area.

Hap met his wife-to-be while he was teaching a class in non-visual perception to high school students at a summer camp in Buena Vista, Colorado. The two were married in August of 1976. Stephanie, who is sighted, received her ham ticket and KA9WKD callsign in 1986.

Over the years, Hap Holly has written articles for the Spec-Com Journal, Radio Scan Magazine and occasionally reports for us here on the Amateur Radio Newsline. Holly is also a common sight at the Dayton Hamvention, taping forums which are then incorporated throughout the year into his RAIN Reports. And since 1975 KC9RP has been an honored member of the Des Plaines Lions Club. He has also been a member of the Des Plaines Toastmasters since 1976. He and Stephanie are also active with Des Plaines Illinois Emergency Medical Alert system.

Named as this years Hamvention Technical Excellence award winner is Alan Waller, K3TKJ, of Laurel, Delaware. Waller was chosen for his work that lead to the interfacing the Internet to Amateur Radio.

First licensed in 1961, Waller combined his decades-long love for Amateur Radio and a burgeoning interest in the then-new Internet to design and manage the www.qsl.net and www.qth.net web sites. That was back in 1993. Since that time, Alan Waller's web sites have come to serve the needs of tens of thousands of ham radio operators worldwide by providing a vast technical reference platform, an electronic mail service, web page hosting services, and links to thousands of other ham radio related sites. And in the true spirit of the Amateur Radio, Waller's initial work utilized leading edge experimentation to see what could be done with the technology then available. This has developed into a mature, reliable service to the world wide ham radio community.

Rounding out this seasons winners are a pair of pair of space exploring hams who have been named as co-recipients of the 2002 Hamvention Special Achievement Award. Former astronauts Owen Garriott, W5LFL, and Tony England, W0ORE, are being honored for paving the way for manned ham radio operations from the space shuttles that has made ham radio a permanent part of mans exploration of space.

Owen Gariott, W5LFL was first. On November 28, 1983, Garriott, was launched into space aboard the space ship Columbia for the STS-9 mission. It was the Spacelab 1 mission and Garriott brought along the first Amateur Radio station on a crew-tended space vehicle. It was a simple Motorola hand held transceiver connected to a special antenna designed to fit in the Space Shuttle’s window.

Three days later, W5LFL came on the air and hams across the United States and around the world were witness to a historic radio transmission:

--
Owen Garriott W5LFL: “This is W5LFL in Columbia. W5LFL in Columbia orbiting the Earth at an altitude of 135 nautical miles passing over the U.S. West Coast and calling CQ.”
--

Among those who heard Owen Garriott's Amateur Radio transmissions from space was Lance Collister, WA1JXN of Frenchtown Montana. Collister, who is now W7GJ, is credited with being the first amateur to work an astronaut in orbit. Take a listen:

--
Lance Collister WA1JXN/W7GJ: “W5LFL on Columbia, WA1JXN, W-A-1-Japan - Xray-Norway, WA1JXN Frenchtown Montana standing by.”

Owen Garriott, W5LFL: “Hello W1JXN, WA1JXN, WA1-Juliet-Xray-November. This is W5LFL. You’re our first contact from orbit. WA1JXN, how do you read? Over?”
--

The success of Garriott’s mission lead to the development of SAREX -- The Shuttle Amateur Radio Experiment. And, over the years, SAREX permitted youngsters in classrooms around the world to speak directly with astronauts in space. But for this to happen, the technology of manned ham radio operations from space had to be enhanced. This aspect of the then new SAREX program fell to the next ham radio operator orbited: Tony England, W0ORE.

W0ORE flew into space on the shuttle Challenger in 1985. It was Mission 51F, Spscelab 2. In addition to the 2 meter FM voice gear, Tony England also had with him the first ever ham television station to go into space. Slow Scan yes, but capable of sending back high resolution images which hams on the ground equipped with SSTV gear could view live or record on a simple audio cassette for later viewing and historical archiving. From space, Tony England described the station he was using:

--
Tony England, W0ORE: “Essentially we’ve got a commercial TV camera that anyone could go out to their local radio store ant buy. We feed this into a scan converter built by a commercial outfit and modified by NASA Amateur Radio clubs and this takes a snapshot of the scene and digitizes it and put it in a memory.

Then its sent to a handie-talkie like this. From there we will send it over a wire up to the upper window upstairs and to this antenna when I get it up there in the window. Then it will be transmitted to the ground.

When we get going, we will be able to send color TV images of what we are doing on board as a series of snapshots updated every 10 or 20 seconds. Amateurs anywhere on the ground will be able to receive them, and ones with scan converters will see the pictures.”
--

That flight also marked another first. The first ever two way television -- ham radio television -- to and from space.

Tony England went on to flight prove both the improved FM voice and then new SSTV systems. The SSTV was so successful that NASA gave very serious consideration to a permanent installation on all shuttles for back up communications. More important, the early on-orbit operations by Own Garriott W5LFL and Tony England W0ORE made possible the thousands of educational contacts between children in school classrooms and the crews flying in space. First, on board the shuttles, and now as a permanent part of the International Space Station.

Hap Holly KC9RP, Alan Waller K3TKJ, Owen Garriott W5LFL and Tony England W0ORE will receive their honors at the Hamvention Awards Banquet slated for Saturday evening, May 18th at the Nutter Center in Dayton Ohio. Amateur Radio Newsline will be there to bring you this story and all the news about Hamvention 2002. (ARNewsline™ from Dayton Hamvention® news release. Some audio from "Amateur Radio's Newest Frontier" and "SAREX - The Shuttle Amateur Radio Experiment" video presentations)

RADIO RULES: FCC RESUMES VANITY PROCESSING

Vanity license processing is getting back on tract. According to a Legaue bulletin the FCC now has all outstanding vanity applications filed last October in hand and is ready to resume routine vanity processing. Until recently a single missing vanity application had been holding up a backlog of more than 2000 vanity applications. The FCC credits the ARRL in part with helping to locate applicants and resolving the problem. (ARRL, FCC)

**

RESCUE RADIO: AMATEUR RADIO EMERGENCY COMMS SUMMIT

The first ever Amateur Radio Emergency Communications summit was held in Indianapolis last week. Amateur News Weekly's Jack Parker, W8ISH, reports on the success of this first meeting.

--
They came from the Red Cross, Salvation Army, ARES, RACES and even CB-radio's REACT team. Two dozen representatives of different Amateur Radio emergency communications groups met in a Federal Building training room to find ways of helping local and state emergency management organizations. The summit was organized by Marion County ARES director Mike Palmer, N9FEB. Palmer cited a need to develop better communications and cooperation between the different groups.

Many amateurs wear two or three different hats when it comes to providing public service. Palmer wants to identify those who are willing to help and to better utilize the voice and data communications available in the Marion County Amateur Radio Community. Many of the summit participants agreed this type of effort is long overdue.

Members of Army-Navy and Air Force Mars, as well as the Indiana Wing of the Civil Air Patrol offered their services during times of disaster. Everyone agreed this was a good start and look forward to future efforts to better train and organize Amateur Radio Emergency Communications in Marion County and Central Indiana.

Reporting from Indianapolis for Amateur News Weekly, this is Jack Parker W8ISH.

--

According to Jack, everyone came away from the meeting knowing that cooperation between groups is a key element in providing better service to the public. (ANW)

**

RADIO RULES: FCC ADOPTS AMBER EAS EVENT CODE FOR CHILD ABDUCTION CASES
The Federal Communications Commission has announced the adoption of a Report and Order amending the Emergency Alert System rules. Included are several new EAS event and location codes, which broadcast stations and cable systems may use to alert the public in the event of state and local emergencies. Of these, a new Child Abduction Emergency event code may be the most interesting to hams involved in Search and Rescue and who have E-A-S decoders installed in their repeaters.

The plan is described as a voluntary partnership between law enforcement agencies and the media that will be used to alert the public of serious child abduction cases where police believe that the child is in danger of bodily harm or death. Under the plan, radio and television stations will be permitted but not required to interrupt programming to disseminate information concerning serious child abductions when the new Child Abduction Emergency code is received. It could also be used by hams as an automated call to action to help find a missing child if used to activate an E-A-S equipped Amateur Service repeater.

Police departments say that every minute counts in dealing with an abducted child situation. In adding the Child Abduction Emergency code the FCC says that its responding to public concerns. (FCC)

**

ENFORCEMENT: FCC COMPLETES GEORGIA ARRL VEC EXAM SESSION AUDIT

The FCC has wrapped up an investigation into apparent irregularities at five ARRL VEC-sponsored Amateur Radio examination sessions in Georgia during 2000 and 2001. As a result of the probe, FCC Special Counsel Riley Hollingsworth says that several examinees will be called back for partial retesting:

--
Riley Hollingsworth: “We determined reviewing all of the information that was brought to our by the League that eight examinees will have to be retested on the code element. The ARRL has also relieved ten VE’s of their duties as volunteer examiners.”
--

According to the ARRL Letter, all V-E’s who might have been involved were suspended after the FCC investigation began last year. (FCC, RAIN)

**

ENFORCEMENT: A REPEATER OUTSIDE OF THE BAND

The FCC is also looking at the operation of repeater in the Metro New York City area. Again, the FCC’s Riley Hollingsworth:

--
Riley Hollingsworth: “We opened an inquiry into allegations that an uncoordinated repeater operated by Thomas Batista, KC2DDD, and Gerardo Arias, N2IFU, in Corona and Staten Island New York. Now that repeater is not only causing interference to a coordinted repeater, but the input is apparently on a frequency not even allocated to the Amateur band. So, needless to say we are real interested in reviewing that response when it comes in.
--

What Hollingsworth will be looking for is an answer to why the machine is using 143.020 MHz as an input frequency as well as why its on the air without coordination. 143.020 MHz is a full 800 Kilohertz below the bottom edge of the 2 meter Amateur band. (FCC, RAIN)

**

CONVENTIONS: SOUTH EAST VHF SOCIETY CONFERENCE

On a far lighter note, the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27th in Oak Ridge, Tennessee. And they too are putting out a call for papers. If you are interested in participating, please contact KG4QDZ by e-mail to kg4qdz@arrl.net. (VHF Reflector)

**

CONVENTIONS: CHARLESTON HAMFEST MARCH 16

And the 18th Annual Charleston Area Hamfest and Computer Show will be held Saturday, March 16, 2002 from 9 AM to 3 PM at the Coonskin Armory in Charleston, West Virginia. Talk-in is on the 145.35 MHz repeater. Admission is $5 and there will be free parking. More information is available by e-mail to n8tmw@arrl.net. (N8TMW)

**

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

HAM RADIO POLITICS: NCI LEADER CALLS FOR ELECTIONS

Bruce Perens, K6BP, the founder and an incumbent director of No Code International says that its time for new directions for the group and has called for elections. Amateur Radio Newsline’s Norm Seeley, KI7UP, has more:

--
According to Bruce Perins, K6BP, when he started NCI in 1997, he never dreamed that it’s goals would be achieved so quickly. But says Perins; “we are most of the way there.”

Perins notes that last year the International Amateur Radio Union voted to ask for the removal of the international treaty provision requiring Morse Code testing for Radio Amateurs. Now Perins observes that even ARRL has voted in favor of removing code requirements from the international Radio Regulations.

With what he terms as -- no remaining credible opposition to NCI's cause left on the international level -- Perins says that it is time to turn NCI’s focus to domestic policy. He says that for NCI to take an appropriate role in the end-game of the no-code battle means cooperation with national societies like the American Radio Relay League. And to do this, Perrins believes may take some new people.

So Perins has asked that an election for new directors be held no later than April 30th of this year. He also says that any person who was an NCI member on December 31, 2001 can be a candidate for director, and is eligible to vote in the election.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

More information about No Code International is on the web at www.nocode.org. (ARNewsline with information from K6BP)

**

HAM RADIO IN SPACE: AO-40 GPS TEST RESULTS PUBLISHED

The February issue of GPS World included an article titled Formation Flying in Space. Authored in-part by AMSAT North America's Frank Bauer, KA3HDO, the essay shows G-P-S results from the receivers that NASA’ Goddard Space Flight Center provided for flight on the AMSAT OSCAR 40 bird. According to Tom Clark, W3IWI, the data shown in the article was downloaded using AO-40's RUDAK system by WD0E and KB0G. (ANS)

**

WRTC-2002: ORGANIZING COMMITTEE ANNOUNCES THE COMPLETE LIST OF OFFICIAL ON-SITE REFEREES

The WRTC 2002 Organizing Committee has named a full list of on-site referees for the upcoming games. The committee says that it received more than 100 highly qualified applications and those chosen were from that group. A full list of referees and other information is available on the web at www.wrtc2002.org (WRTC2002)

**

DX

In D-X, word that Dave Cree, G3TBK, has returned to work in the Caribbean. Throughout March Dave will be active as J88DR from St. Vincent. For the first two weeks of April look for him J3 slash G3TBK from Grenada. Operations will be on all bands, but concentrating on the WARC bands, mostly on C-W, but with some SSB. QSL to Dave's home call either direct or via the RSGB bureau. (RSGB)

The New Zealand Amateur Transmitters Society is warning hams world wide of what they say is a pirate operation. According the NZART News, a maritime mobile station using the callsign ZL2TO and the name Tony has been heard recently operating on nets on 15 Meters. This station currently gives his location as the Cape Verde Islands. Only one problem. The ZL2TO call sign is allocated the Waitara Amateur Radio Club. (NZART)

And the South Africa Radio League news service says that anyone who has held a QSO's with 7Q8 slash ZS6GH or C9 slash ZS6GH should write them off . SARL says that these have been declared null and void because license or authorization to operate was issued by the telecommunications regulators in Malawi or Mozambique. (SARL)

**

THAT FINAL ITEM: NOMINATIONS SOUGHT FOR THE YOUNG HAM OF THE YEAR AWARD

And finally, we started this weeks newscast with a story about awards. Lets end it on a similar note as we here a Amateur Radio Newsline officially open the 2002 nominating season for our own Young Ham of the Year Award.

The Young Ham of the Year award was created in 1986 by amateur Radio Newsline producer Bill Pasternak, WA6ITF, to fill what he viewed as a void where younger members of ham radio society were often overlooked:

--
Bill Pasternak, WA6ITF: “When I was a young ham in the 50’s and 60’s the good deeds of young hams were often overlooked and ignored. When I grew up I was fortunate enough to be in a position to remedy this and thats how the Young Ham of the Year Award program came about. Thats how it came into being”
--

The award as originally envisioned as very low budget. One idea was for a certificate that would be mailed to a ham, age 18 or younger who had shown some exceptional ability or performed some heroic deed that set him or her apart from the crowd. When Bill mentioned the idea to Chip Margelli K7JA, of Vertex Standard back in the company’s days as Yaesu USA, the idea quickly expanded. Margelli offered company support on the spot:

--
Chip Margelli, K7JA: “When Bill Pasternak gave me a call and dsescribed the project to me in the tiniest bit of detail it was obvious that this was a no-brainer and something that we as a company at Yaesu wanted to encourage. So, I jumped at the opportunity to be a major contributor and it has been a great project ever since.”
--

The award now had substance, but it lacked a permanent home. One was found in 1993 when it was invited to the Huntsville Hamfest:

--
Bill Pasternak, WA6ITF: “The way we got to Huntsville? Simple. We advertised. We put a notice into the newscast that we were searching for a permanent home. The answer came in a note from Scotty Neustadter, now W4WW, who is the Huntsville Hamfest Chairman. Scotty basically said bring it to Huntsville. And we did.”
--

While the presentation ceremony did go to Seaside Oregon in 1994, it returned to Huntsville in 1995 where it has been ever since. And in 1996 a second major corporate underwriter came on board. C-Q Magazine. Rich Moseson W2VU, is editor:

--
Rich Moseson, W2VU: “We at CQ have always thought that it is very important to promote Amateur Radio to young people and we saw that co-sponsorship of the award was the way to help do that.
--

What CQ did was to add to the Young Ham of the Year awards chest something very special. A week of fun and excitement at Spacecamp. Today, with corporate sponsorship from Vertex-Standard USA and CQ Magazine, and support from countless others including the ARRL, Dave Bell Associates and Rosewood Communications the Young Ham of the Year Award continues to honor the Amateur Radio related achievements of those hams age 18 or younger. And now its time to find a fitting recipient for 2002.

Full details, rules and a nominating form are available right now on our website at www.arnewsline.org. Just scroll down to the Young Ham of the Year Award area and click to download. Or you can send a self addressed stamped envelope to the 2002 Newsline Young Ham of the Year Award, 28197 Robin Avenue, Santa Clarita California 91350 and we will mail back the materials.

The Amateur Radio Newsline Young Ham of the Year Award is a one of a kind. It honors the youth of ham radio and in doing so, we hope it helps to insure a bright future for the hobby and the radio service that all of us love. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, another reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

I'm new to using scanners and I don't understand the manual that much with this scanner. I'm trying to set it up to listen to the local Police in my area (Denver, CO). Their using a trunk system. I would like to set it up to monitor dispatch in a couple of Police districts.

Is their a dummies text file or can someone help me ?

Thanks... Please email my privately if you like *pop357@yahoo.com

Picked up in a partial trade, a like brand new BC245xlt Trunking handheld scanner. Comes with a leather carry case, two batteries, charging craddle so you can always have a battery charged up, wall and car charger.

No manual but you can find it on the net.

The extra battery and craddle is just bought last week and they are still shrinked wrapped in the package.

I don't need this. I have enough scanners already.

Price: $160 shipped COD or PrePay from Las Vegas

550. FS : Uniden 210 XL base scanner

Newsgroup: rec.radio.scanner

I have an absolute MINT Uniden 210 XL base, programmable scanner for sale. This scanner does not have a mark, scratch or scuff on it, works perfectly. Excellent for a scanner collector or someone looking for the quality afforded in these older base units.

I have no idea what it is worth, so I will entertain serious, reasonable offers, and ask for an extra 10 bucks to ship it via US Postal, Priority mail.

I will accept a US Postal money order or PAYPAL only. If you must, a personal check is OK, but shipping will be delayed until the check clears. NO C.O.D.

ebAy feedback under OFFDAN. NO TRADES.

E-mail if interested, or with your offer.

Dan

551. FS : Radio Shack Pro-2004 base scanner

With Spring cleaning I am forced to let go of another gem from my collection of base scanners.

This one is the Radio Shack (Realistic) Pro-2004 base scanner. Solid, sensitive, great shielding, great audio, and unblocked! In absolute Excellent condition and fully functional.

I am asking $150.00 shipped via US Postal Priority Mail, insured.

I will accept a US Postal money order or PAYPAL. If you must a personal check would be OK, but will delay shipping until it clears. NO C.O.D.

eBay feedback under OFFDAN - NO TRADES.

E-mail if interested.

Dan

I's the same receiver. Only the bells and whistles--CTCSS decoder,
more channels, etc.--are different. Not worht the extra money, unless
you've got to have two hundred more channels and a PL decoder.

Sir:
What I do to unblock my Uniden Bearcat 895XLT scanner???
In Brazil is not illegal to hear cell phone and/or wireless phone.
But you can't divulge what your heard.
Thanks in advance!

It was the best scanner of its time. I still have one next to my
BC780XLT. The fact is though, the 780 blows it away in every way
possible, except for the fact the 2006 800MHz can be unblocked.

The only thing the 2067 and 2053 have in common is that they are both
made by GRE. They are not the same receiver.

Greetings,

I have for sale a "used once" Radio Shack DX-398 (Sangean ATS-909 clone) portable shortwave receiver. Unit is in mint condition with original box, case, owners manual, and an ATS-909 fact sheet printed from internet information. Sells new for $239.95 and up.

Reason for selling: I purchased it at the end of September, 2001 but have only used it once. Liquidating for other radio purchases.

Price: $150.00 shipped UPS ground USA only upon receipt of US POSTAL MONEY ORDER ONLY! I will provide you with a UPS tracking number when the shipment is enroute.

Please contact me via e-mail if interested. Thanks for reading.

Well, from one Texan to possibly another, Uniden and Radio Shack are both SCANNER HEADQUARTERED in Ft. Worth. And Radio Shack only sells scanners. They are made by GRE and Uniden. And if you don't like either one of those, good for you buddy, cause the demand is way too high and the prices are going up! Enjoy reading the manual every time you use your Yugosacki radio! I hope it is printed in Japanese!

580. Question on buying a used scanner

Newsgroup: rec.radio.scanner
Date: 2002-03-12 01:53:57 UTC
From: spa232@yahoo.com
Message-ID: <30600840.0203111753.8b6a383@posting.google.com>
Source record: 50896

I was thinking of buying a decent scanner. It doesn't have to be top of the line, but I'm sick of my old 10-channel and 40-channel models. I was thinking of getting a scanner with about 100 channels and looking to pay less than $250 or so.

Is it legal to buy a used scanner that doesn't block so many frequencies (like cell frequencies)? I'm not necessarily looking to buy one but I was wondering what the deal was. Can anyone recommend a good model to buy?

Any information is appreciated.

FS: Motorola UHF Portables listed below. Both have antennas, chargers, and batteries. Both power up and transmit and recieve well.

1 P-1225, 16 channel, front display, DTMF pad, speaker mic. 9 on 1-10 scale. NO belt clip. Model # P94ZPD90C2AA $325

1 GP-350, 16 channel. 9 on 1-10 scale. Believed to be 403-470 split. Unfortunately the sticker has been removed, so model number is not avail. $300

Take both radios for $600 and I will include shipping. Buy seperate and you will have to pay shipping from 35811. Both radios are open for offers. please email direct. EMTSPruitt@aol.com

Ok... but WHY do you not want any of your posts to be archived??? I could see if I wrote some flame
mail that I might want not saved; or if I had to ask a question that I thought might be a stupid
question (like THIS one, perhaps); but why No-Archive everything?

TC

BTW, it IS a cool trick - thanks for the tip - got any more?

If they still have them Try Tandy National Parts. There support web site
suggests their part number is KC0385 and you can get them on
1-800-843-7422. If not I think we still have a few left.

From: ajo55 <ajo55@comcast.net>
Message-ID: <3C8DDDAA.7F3A4C7F@comcast.net>
Source record: 50803

Does anyone know of any mods to this scanner, specifically a way to
increase
the volume output similar to the same mod that was available for the Pro
43,
that one worked like a charm !!!!!

Also if anyone is not aware, the web page of Firehouse magazine,
www.firehouse.com has 11 downloadable audio files from NYPD and FDNY
radio
the day of Sept 11th, very interesting listening, even for those NOT
affiliated with Fire and Police scanning.....Look for the link on the
first
page that says "911 Disaster", then click on audio and video files.

PRO 2006 scanner. Extremely clean (non smoker) condition and works as new. Clean as you will ever find. Extremely little use on it even the volume dial is still stiff! Comes complete with manual and original antenna. Scanner has the cellular and speed mods completed. I accept money orders only. Price is very firm at $250 shipped via UPS. I am sure anyone who knows about these will be extremely happy. thanks bruceinomaha@yahoo.com

Pro 26 300 channel scanner. One of the great ones. 25-1300 mhz. Picks up cb, tv, fm radio, police, fire, etc.. Very fast scanning and searching. Comes with small external speaker I purchased yesterday along with ac adapter yesterday, antenna and fresh aa batteries. Speaker is blown hence the external speaker. Other than that the unit works great and is clean. Very impressive. Price includes UPS shipping. I accept money order only. thanks http://mediaservice.photoisland.com/auction/Mar/2002395338290496268535.jpg

Voice Frequency Inversion

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

'Morning, group,

Just bought one of the "on sale" 2053's, and visited the RS site in an attempt to locate one of the interface kits that is advertised via an insert. No joy. The part number is not available on their site, and I have asked them to 'splain why. Thought I'd check the assembled knowledge base here, for an opinion as to whether the kit is worth pursuing, and if it is available elsewhere.

TIA.

Jim

I assume you are referring to the computer interface kit. It is not yet
available from RS.

Go here

http://www.starrsoft.com/freeware/Win93/index.html

to download a free program, WIN93, which works great, and for
information on building or buying cables.

Go here

www.pro-92.com

for info on a just released commercial program.

It is illegal to make a new scanner with the cell phone channels in it. If you find a used Pro 200x scanner and decide to clip the resistor lead that restores the cell phone channels, who is going to know the difference LOL Now they are forcing the makers of scanners to block those channels more permanently than when they first made it illegal. a Realistic Pro 2004,5,6 used scanner would always be a good choice.

Yes I have, and Winradio isn't bad - if you're in to the PC thing. I prefer tabletops and use a BC-780xlt for UHF/VHF stuff and a Drake R8B for the HF. One radio for both purposes doesn't exactly get it with respect to antenna switching, in my opinion. Also, people change computers often and the more you pull cards, the greater chance that it'll be the last time it works for lots of reasons.

But I like to spin the knobs and all that old-fashioned stuff, so I prefer the traditional radio thing. <g>

Cheers!

Time for a new computer. I currently have 3 Compaqs (2 500 MHz and a 933 MHz) in the radio shack. I haven't yet to receive any RFI from these computer (all three are on 24 hours/7days a week).

In the past I've had some older "no-names" which produced so much RF that it wasn't worth turning on the radios.

I'm thinking of a Gateway 2GHz machine. Wondering if anyone can report using a Gateway with their radios and not experence any RFI.

Can't get one for the 2005 either. However, the two clam halves of the
case are still available! Go figure!

Tried getting hold of GRE. You can't get anywhere at www.greamaerica.com
or via their customer service number, they refer you to the Japan
company. However, I'm not about to call Japan and when I click on their
email link my browser (Galean 1.03) crashes.

Hear Live Daytona Beach Beach Patrol, Police and Fire during Spring Break 2002. We'll be broadcasting 24 hours a day unless we have Thunderstorms in the area. You can listen live at http://www.MilAirComms.com

Starting 3/11 begins Spring Break and it will last until 3/31. 200,000 Drunk College students invade Daytona Beach. On just day 2 local TV stations report larger crowds and more underage drinking then ever before. So far this is the largest springbreak in the last 10 years.

Hello all. . . .

My ICOM R-75 SW receiver has a remote jack that will control the remote of a tape recorder--it only runs the tape when it receives a signal. Anyone know of plans for a similar circuit I could build for a scanner?

Alternately, are there computer audio programs out there that will just record when a signal is received?

Thanks!

Jim

I don't think you can reliably associate RFI with a particular brand.

All of my computers are homebrew. I have traced my RFI down to a single program on one of my machines that runs Linux that sends keep-alive packets to my ISDN terminal adapter.

I remember in the olden days, the FCC used to issue certifications. I'm not sure if they still do or if the requirements have been relaxed. My point was that if you run down the REAL source of the RFI, it's likely to surprise you.

Does anyone know if this is considered an upgrade for the original
RS/GRE software for the PRO-92?

My serial number/activation code/CD wouldn't activate the program.

The Signal Intelligence "Help" page wouldn't process my questions.

I accessed the Win93 freeware using a link by way of the WWW.Pr093.com web site. Now, I originally downloaded the Win93 using Windows 98 and I got the version 3.01. I just got a new Pc with Windows XP Home Version, went to Pro93.com and used the same link to download the freeware. What I got this time is a version 0.11 and it looks different than the version I downloaded before!! Any reason to this? I would really like to use the 3.01 version again. I liked it better. Any help from someone who knows what they are talking about is appreciated. Flamers......go ahead....make my day........

651. FS: MAX233 IC for computer interface cable.

Newsgroup: rec.radio.scanner
Date: 2002-03-13 08:22:11 UTC
From: nr6z@yahoo.com
Message-ID: <9c46f45b.0203130022.7f05e5f9@posting.google.com>
Source record: 50766

I have 5 of MAX233 RS232 transceiver chips for sale.
It can be used to build very simple computer interface
for all kinds of scanners and two way radios.
It requires no external capacitors like MAX232.

Check out the interface schematic diagram using this IC:
http://www.qsl.net/nr6z/images/max233_interface1
http://www.qsl.net/nr6z/images/max233_interface2

Asking $5 each includes shipping in USA.

If interested, please email directly to me at
nr6z@yahoo.com

From: Stanley Kaliski <tanker001@yahoo.com>
Message-ID: <Gswx0H.AFy@news.boeing.com>
Source record: 50769

I use my Pro-93 at work with a Dell OptiPlex GX1 and a 21-inch monitor, maker unknown, it has dell on the front and the word "Trinitron". Whether the hole monitor is made by Sony or just the tube some of you out there may know.

I get a lot of RFI from this monitor depending what's on the screen. I try to place the scanner as far away from the computer as practical. I'm sure its what is on the screen because when the scanner locks up on nothing but static and garbage it stops as soon as I hit the show desktop button (closes all windows with one click) on the menu bar. I have done this to many times for it to be coincidence.

I have a Pro-76 Scanner that fell off the table with the power cord plugged into the CHARGER terminal, not the POWER terminal. As Murphy's Law kicked in, it landed on the side of the scanner and directly on the power cord's plug, snapping the terminal off the circuit board.

One would think that all I need to do is plug the power cord into the power terminal and it would work, right? Not. Seems that the scanner's circuitry checks to see where the power cord is plugged into and with the terminal being broken off, it just powers off.

My question is, should I take it to RS for repair (and how much would I expect to pay for the repair) or should I just solder a jumper on the circuit board? If the jumper is the answer, which of the three contacts should I solder?

the original creator of that sites text and design is still going strong on the original site. most of us don't like to see people stealing sites and links. If they steal a link or a site. make it atleast look like they created it themself.

664. New version of Win93 available

Newsgroup: rec.radio.scanner
Date: 2002-03-13 17:39:58 UTC
From: Don Starr <don@starrsoft.com>
Message-ID: <k03v8uss906gh4s0bn1eoit041vph8a7bl@4ax.com>
Source record: 50780

Win93 version 00.19 for the Pro 93/2053 is available. The new version cleans up the default channel alpha tags, and adds an option to control the "ID sub-bank on/off" mode (the mode in which the scanner displays "T IDbk 01..." when it stops on a voice transmission).

The second change was added only because a user had somehow managed to create a P93 file that always set his scanner into this mode - the new change allowed him to "fix" that, so that the third line of the display shows the channel alpha tag instead of "T IDbk 01..." when the scanner stops on a voice transmission in a trunked system. I'm aware that this mode can normally be controlled via FUNC TRUNK, but this user's P93 file was overriding that setting: every time he power-cycled the scanner, it entered that mode again.

The new version is available here:
http://www.starrsoft.com/freeware/win93/index.html

To the group
I have been getting parcels arrive at my home here in the UK,, from the USA and Canada, They contain various equipment such as radio's, computer hardware etc. Now I know nothing at all about these items. It would appear that they have been sent to me by way of some form of trade. At first I was simply returning them to the sender at my expense, but know I'm afraid it is starting to get a little expensive, I have therefore had to write a letter of explanation to the senders and ask them to either arrange for Fedex or similar to pick the items up, or send me the funds needed for me to return the goods to thier owners. I therefore request please that no-body sends any goods to George Bentley from Wales in the UK. (this is not my name anyway, it is the name I use on the internet) For those of you who have sent goods to my address, if indeed there are any others. (I have returned 7 packets to date) please do not worry as you shall be contacted and your goods returned. I think I may know who is responsible for this *prank* but cannot prove it.
I hope that nobody has been unduly worried about this.I promise you will have your goods returned. I am however half way through a deal with one guy, a Mr P knode. this is the only deal that I am involved in.
thanks
GB
PS. if you have sent anything to me and you have not heard anything please write me at
gbmw1@ukonline.co.uk

This is an entirely new program designed to separate you from your money.
The old Data Manager program is listed as discontinued on the GRE site and
the last update was almost a year ago. Don't expect any consideration
regarding a reduced price for upgrading.

Do they normally charge so much for shipping? I mean $10.84 for UPS ground shipping for an Icom R2 case? Jeez! It is my fault for not asking for sure so I have no recourse.

After hearing of another customer receiving an R2 with battery draw problems and them telling him to deal with Icom directly (initially, then replacing it) seems like poor service. They have a lower price, then gouge in shipping and that is awful to me.

I am new to radios and am getting my feet wet with dealers. Sorry to say They will be off my list for future purchases.

Dennis,

I have done business with these folks for a number of years,
and I can't comment on the UPS charges,
but they have gone out of my way to make me a happy customer.

They have swapped out numerous pieces of hardware for me,
where the return shipping was at my expense, but the replacement
was on there nickel.

Just another opinion,
Keith - WD5BJQ

Sorry you had a bad experience Dennis. I've dealt with them for just over 10 years now and they've always been stand-up in those dealings. One of the best things is the fact that you can get in touch with the owner just about any day of the week.

While I can't really speak for the UPS charges, I know that recent rate hikes from UPS have forced me to look at alternatives in the shipping business. USPS & FedEx Ground are getting the bulk of my outbound now due to the UPS increases.

My suggestion would be to call Burghardts and question the charge with the owner. I'm sure that if you're reasonable you'll be able to come to some type of agreement. (at least I hope you can)

Best wishes,

Mark - N0NSV

Eric doesn't know where he got it either. He has been arguing with the
author of the software as to where the software is located for a few days
now. Evidently Eric has neither common sense nor an education.
All persons wishing to download the software for the should go to the link
that David shows. Since Eric has already insulted every one he talks with
we'll let him solve his problem.

Insurance? The insurance on a shipment with a value of several hundred
$s can be significant. Dit you insure the contents of your 5lb. box?

Eric, Eric, Eric... We've been through this before. You can not download Win93 from that site you listed. You can download pro93.exe from there, but not Win93. Where on that program did you ever see Win93??? Seriously, I don't know what drugs your taking but you've asked this question before and gotten the same answer as to what I just gave you. Short attention span?

If you go to that pro93.com site, you can download that version 3.01 program you used. If you go to the starrsoft site you get Win93. Now, what part of that don't you understand? Is it too hard to download both programs and look at them??? Or are you on a 14.4K connection?

Sheesh... You remind me of those people who are too lazy to read the owners manual, instead you post questions on how to operate the thing first before reading (downloading in this case). I hate people like that. I think everyone does.

BTW, do you go to Burger King to order a Big Mac?

I refuse to use UPS, because of the cost and the "non"service, i.e. drop off on the doorstep, leave w/neighbor. I have dealt w/Burghardt's quite a bit and they are only charging what UPS tells them the cost is.

I never use UPS unless I am absolutely forced to, I would rather look my local postmaster in the eye...

And you know what the really crooked thing is? They are shipping these items by truck, NOT 2 day air. It happens all the time in the shipping business. People are being charged air freight rates from Minneapolis to Chicago--guess what? It only takes a truck driver six and one-half hours to get there. You pay $4 a pound for "air freight" and UPS takes $2 and the trucking company takes $2, and both laugh all the way to the bank...

Until recording companies and their artists find a way to work together
and bring a real Napster experience to paying customers, no service will

be a success. As a sign of how anemic the new services are, neither will publicize the number of new subscribers.

And as long as recording companies can be accused of doing to musicians what Napster did to them, they look like hypocrites. Turns out they only solved the online-music problem for themselves, not artists. Meanwhile, they created a new world of headaches for online-music users.

People TRY to help people here, especially with a title of "Win93 help".
They help you and you get upset and tell them they are wrong when they
aren't. Then you come back a week later to just simply try to incite
everyone again.

People read your post to help you because people DO care what you say. Its
called common sense and willingness to keep this hobby intresting for
EVERYONE. They come here to learn and teach others if someone has the
knowledge. I am new and learn much from this newsgroup and read MANY posts
if not all.

You come here to demean people and provoke like a troll.

welcome to my killfile

For a driving trip across the country, what would be a better choice of units - the Uniden BC7T (with preprogrammed highway patrol frequencies), or a higher-end unit (such as the 780xlt), where one would have to manually program in the frequencies in each state? The user is a novice to scanners.

Any opinions of the BC7T or similar units would be appreciated.

Thanks!

If he's a novice, he'd probably be better off with the pre-programmed unit...

Opinion: The BCT7 isn't really all that desirable to a seasoned user... Though it takes one to program in your own frequencies... Talk about tedious!

Hello. I recently programmed by new Pro-2053 and I am happily listening to the NJSP. Unfortunately I am not sure if I am getting the NJSP for my area (Dover Twsp). From the transmissions, it sounds like it's too far south. Can anyone tell me what the right talkgroups are for my area (I'm using the talkgroups for zone C) and which frequencies are used? I have found conflicting lists. Some have frequencies that others do not.

Just look at the original message. He downloaded ScanPro93, which is downloaded
from http://www.pro93.com. That's why the author of Win93 doesn't know why he
would have that version... I've tried both and I personally like Win93 better.

Thanks for the useless response.

I've listened some more and it seems like I must have the right talkgroups and freqs programmed in because I've heard some traffic stops up on Rt 70. I guess that's about all I'll be hearing in my area for them.

Road Troopers patrol "Zones" Dover Township is a "No" Zone area, it's
not a designated/defined area of a structured Station Zone. If a Trooper
from say Allenwood Barracks finds himself in TR perhaps on a follow-up
invest and observes a speeding motorist he can make the stop and report
it as a "No Zone" area "moving" stop.

There are exceptions:

CVI units can and do set up inspection stops in Dover Township, more
often than not along 37 or 9... and on weekend summer nights TAC PAC
units are sent out of Princeton into the Dover Township area to patrol
but most of them make their way into Seaside Heights for obvious
reasons.

IMHO, when I purchased 2nd Day Air I am buying the guarantee the package will arrive the second day. I certainly do not care if it actually goes in a plane or in a truck, just get it there on time. I used to be in a mail order company and we shipped nationwide from Kansas City. We knew most packages shipped UPS ground would usually reach Omaha overnight, but there was no guarantee. If we shipped "Air" to Omaha, it most likely went via truck, but arrived as scheduled. Just some thoughts.

>> thanx

I purchased two BC200XLT's new about five years ago for $170 each.
We still use them regularly in our business, and $125 is a good
price for this great scanner.

However with so much stuff going to trucked systems, the price of
non-trunking scanners has been dropping. Do a little shopping around
and you can buy one used for under $100. (I have seen them go for
as low as $80.)

As far as "all 800 band" goes, any BC200XLT can be simply restored to
full coverage with the removal of one 10K chip resistor (look for any
mods page on the web), so that should not effect the price you pay.

The seamless operation of the bct7 is worth a lot. I use the bct 12 for traveling and do not have a concern about when I am in or out of a specific broadcast entity.

I know there are some who use their scanners as an excuse to display their prowess in programming.

Call me lazy, but I do not get any big thrill l out of obcessively tracking down all possible freqs for my intended route and getting them into the scanner. I doubt that I miss very much on my travels as a result of this.

My idea of fun is listening...not programming.

Just my 2 cents...

Do you mean a 800 to 400 downconverter? Not many of them
around much anymore and when you see one on e bay they go
for rediculous prices. Not that they work all that well for cell
anyhow. Keep in mind most scannners in the 400mhz range scan
in 12.5khz steps, analog cell is spaced at 30khz. See the conflict??

But how much time does it take for the BC 7 or BC 12 to scan
from one end of the spectrum to the other? and how much would you
miss in that time span?

Jeff

I'd go with the BCT-7 too, for long-distance driving. When you're on the interstates, all you're normally gonna be interested in is the Hwy patrol/State police, which are preprogrammed... plus you can add 25 of your own freqs to that bank as well... like if you're into trains, aircraft or - heaven forbid - CB. If you're barreling through a city, you'll be in and out of range in too short a time to bother scanning them...generally

Seems to me there IS a way to lockout the priority frequencies. I believe you go to the state and service (e.g. NY - HwyPat), turn the squelch up (to "noisy") and TAB advance one step at a time through the preset freqs. I think the priority channels, usually "extenders," are at the end of the list and you can do a standard lockout there.

Well, when I asked several weeks ago, I was given the information, but
it appeared to be flawed because I received at least 3 different lists
of frequencies, so I was seeking a confirmation as to the TG's and the
frequencies to be sure I had them right. BTW - What TG should I expect
to hear GSP stops in the Toms River area?

Why would you pay for a program for the Pro93 when you can download
one for free? I've tried both ScanPro93 and Win93 and I think Win93 is
better...

I have a life that does not let worry about such things. You are driving across the country and are trying to keep amused by listening to the cops or weather, not attempting to capture everything that is going on.

It does not cover the entire spectrum. Just that portion of the spectrum that I got out of the manual:

37.02-4602

138.3450-172.02

423.0-508-4875

806.0125-868.9875

And, I am not sure about this -- but it is implied in the manual, I think the coverage is truncated depending on the state you select.

If you are concerned about your local area---of course get a program it yourself unit. But for seamless travel in "alien" areas that you may go through again, I recommend something like a BCT7 or 12.

> to hear GSP stops in the Toms River area?

Granted there is much confusion with system information...one of the
features of the 2053 is the control channel decode - enter the control
channels 857.7125 858.7125 859.7125 860.7125 and the frequencies are
generated for you, the voice freqs are displayed on the second line.

GSP type ll talkgroups which patrol the TR area include 30720 and 26960

But, he is not talking about ScanPro, he is talking about
TrunkStar9293. Which, since it works on both radios, the PRO92 and the
PRO93, might allow for easy transfer of data between the two. This
could prove to be a very useful feature.

TC

BTW, it IS a cool trick - thanks for the tip - got any more?

Tom,

Information about a poster that is archived is available for a LONG time. A very long time ago, I managed to become the target of a bored troll in another group. He followed me around for a while and would harrass and pester me. Upon checking the headers, he was posting through the now defunct DejaNews. I tried to access his account just to mess with his head. But, alas, I could not crack his password. So, I began researching him. Discovered his wife also used their Deja account to post friendly messages to other groups. Then, I began taking notes. The wife had posted to several genealogical (sp) groups tracing her family roots. What is the most comonly used hint for lost passwords? Why - your mother's maiden name - right? Guess what his wife had posted and had been archived from years gone by? After I managed to access his email and sent him a letter to his ISP POP3 acct from his own Deja acct., he decided to leave me alone.

I did later drop the guy a note and apologize for my invasive methods. And I then told him how I had done it, so that hopefully he would learn to not leave sensitive info on the net.

Emergency Situation Report e-mail list for Pennsylvanians

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
and manhunts.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time.

PA-SitRep is also building a list of PA-SitRep
Contacts, many of whom are Amateur Radio
Operators with HF capabilities. Contacts monitor
our higher volume SitRep/Discussion list and
have unrestricted posting privilages to the
main Situation Report list which is moderated.

Please visit the site to learn more about the
PA-SitRep mail list and volunteering as a
PA-SitRep Contact:

SWR meters are only used for Transmitting a signal. Rx it doesn't
matter but most use math formulas to get the antenna close to the
desired frequency for better reception of those frequencies.

I know he's not talking about ScanPro or Win93, but that is why I mentioned them. As far as transfering between the 2 scanners, I suppose if you actually own both (why, I can't imagine..), then I suppose something like that would be useful...

How about if you were writing programs for both of them ? :)

> then I suppose something like that would be
>useful...

When developing Win93, I considered letting the program read the
Pro-92's SPG files. I also mentioned to Ken and Bill the possibility
of an SPG -> P93 file converter. Neither of these came to be because:

* what do you do with the extra 20 channels per bank when going
from the Pro-92 to the Pro-93?
* PL and DPL channel Rx modes?
* LTR bank mode?
* The Pro-93 only needs the control channels for trunking systems;
the voice-only frequencies required by the Pro-93 are extraneous.
Moving them over would use up the already-limited channel space
in the Pro-93.
* Copy / paste seems to work well enough (for me and others
that have brought it up, at least).

When I want to program my Pro-93 with data that exists only in an
Pro-92-style SPG file, I open both Win92 and Win93 (they're "kind"
enough to Windows that they should run together on just about any
machine with at least 8MB of RAM). I open the SPG file in Win92 and do
a File->New in Win93. I then do a bunch of copy/paste operations to
get the data from Win92 to Win93. Of course, if the SPG file has more
than 300 channels filled, or if its channel organization doesn't map
well into the Pro-93's 10 x 30 scheme, I'll have to either create 2
P93 files or trim out things I don't need (like the
non-control-channel frequencies in trunking systems).

I suppose that if people really find the ability to transfer between
Pro-92 and Pro-93 formats within the same program useful, I could add
such features to Win92 and Win93. It just seemed like a function that,
if the programs were doing it instead of the user explicitly moving
data, might lead to user frustration when dealing with the radios'
differences in features and capabilities.

I haven't seen the new TrunkStar program - do we even know if it lets
the user "convert" an SPG file to a P93? It is conceivable that the
program merely supports both SPG and P93 files, and allows the user to

copy/paste between them (pure speculation here).

Hi all,

PRO-2006 in very nice condition, backlight is bright, new keypad, some wear on the front panel, great working condition. Overall a very nice sample from a classic series. Popular diode mods done for speed and coverage. Pictures available upon request. $250 includes shipping and insurance to anywhere in the lower 48. Guaranteed no DOA!

Well, it's possible to tune it with something like the MFJ Antenna
Analyzer that provides a low powered signal to use for tuning, but since
you're only receiving with the discone, and it's a wide band receptor, I
don't think you'll find much improvement in tuning it.

You can go to the UPS web site http://www.ups.com to check UPS rates. From Burghardt's to my address, for example, for a 2 lb package via ground to a residential address, UPS charges the shipper $5.11. Maybe you were charged a handling charge or other fee to make the rate so high.

Source record: 50598

You need a wideband receiver/scanner with the capability to receive
wideband FM signals. In particular, it needs the ability to cover the
complete range from 60MHz thru 7 or 800 MHz if you want to receive the
cable TV channels. I don't remember the exact frequency of cable
channel 24, but 181.75 rings a bell.

Some examples of applicable receivers would be the AOR 8200 or the ICOM
R2. These are only two. There are probably another dozen or so
available.

But, a "Police" scanner, such as the PRO-93, Bearcat 780, does not have
the ability to tune to this frequencu or to receive wideband FM signals.

>When you are only receiving, not transmitting, is it possible to tune the
>antenna with an SWR meter or other equipment, or doesn't it matter when just
>receiving?

You don't tune a discone, it's a wideband antenna. "Tuning" it at any given frequency would make others useless & defeat the whole purpose. A discone is a poor compromise compared to a narrow band antenna when compared side by side on one frequency, but it covers a wider range of frequencies effectively than most other designs.
In the case of transmitting on a discone, an SWR meter can confirm the transmission line is intact & the connections are good but there's nothing to adjust on the antenna. If the frequency is within the acceptable range of the discone, the SWR will be (marginally at the edges of the coverage) OK.

"Tom Clyne" <tc60@optonline.net> wrote in message news:3C8D7C52.22C1D0F4@optonline.net...Ok... but WHY do you not want any of your posts to be archived??? I could see if I wrote some flame mail that I might want not saved; or if I had to ask a question that I thought might be a stupid question (like THIS one, perhaps); but why No-Archive everything?
TC

BTW, it IS a cool trick - thanks for the tip - got any more?

Tom,

Information about a poster that is archived is available for a LONG time. A very long time ago, I managed to become the target of a bored troll in another group. He followed me around for a while and would harrass and pester me. Upon checking the headers, he was posting through the now defunct DejaNews. I tried to access his account just to mess with his head. But, alas, I could not crack his password. So, I began researching him. Discovered his wife also used their Deja account to post friendly messages to other groups. Then, I began taking notes. The wife had posted to several genealogical (sp) groups tracing her family roots. What is the most comonly used hint for lost passwords? Why - your mother's maiden name - right? Guess what his wife had posted and had been archived from years gone by? After I managed to access his email and sent him a letter to his ISP POP3 acct from his own Deja acct., he decided to leave me alone.

I did later drop the guy a note and apologize for my invasive methods. And I then told him how I had done it, so that hopefully he would learn to not leave sensitive info on the net.

Yes there is. You need a device called a Bragg Cell, which is used in conjunction with a wide band receiver, a LASER and a high speed photodiode array. The unit breaks a wide RF spectrum into the constituent data bits, which to the ear sound like noise but represent the spread spectrum signals as they move in a pseudo random pattern. This is fed into the Bragg cell while the LASER is projected thru the Bragg Cell. Like a prism, it projects these noise bursts onto the individual diodes in the photodiode array. It takes a CRAY or similar computer with the appropriate software which can look at them in near real time and determine that there is "intelligence" present in the noise. This then manages a receiver to track and decode the signal.

This is a big $ solution, but not very mobile.

Actually, the Radio Shack discone has a 6m coil and whip for tuning. The whip is shipped a little longer so that it can be trimmed down for tuning within the 50-54 MHz range. I was able to tune it very nicely using an SWR meter. The performance, however, is probably not as good as a narrow band antenna designed for that band (as you stated).

It IS a narrowband antenna when used on 6M- nothing more than an inductively loaded ground plane- with short radials. It is not functioning as a discone at these frequencies.

With the possible exception of the low-band vertical radiator at the top of some discones, there's nothing to tune. It's an extremely broadband antenna, anyway. Nothing to tune to, in a practical sense.

801. China/Beijing Scanning

Newsgroup: rec.radio.scanner
Date: 2002-03-16 20:38:58 UTC
From: wilrobnson@aol.com
Message-ID: <20020316153858.07176.00001482@mb-cr.aol.com>
Source record: 50617

Does anyone know where I can get some info on scanning (esp police/public safety) in China, esp the Beijing area? I've looked all over the web with no results other than HF stuff. I'm probably going to be over that way this summer, and the girlfriend has agreed to translate what I hear (probably not as often as I'd like though). I had this vague idea they're in the 300mhz range, but cannot find anything to confirm this...

TIA
Brett

You can download and install tk8500 from
my web page. Tk8500 is open source software for
the ICOM IC-R8500 and tk8500 works on several
operating systems.

I don't warrant tk8500, but it won't cost
you anything.

803. 499 Dollars for Plug Uniden Board

Newsgroup: rec.radio.scanner
Date: 2002-03-16 21:20:49 UTC
From: Tom <death.to@spam.box>
Message-ID: <a70d0901bjv@enews3.newsguy.com>
Source record: 50619

Hi,
At work we just got a packet of information on the upcoming Uniden Digital Scanners at the department store I work at. The scanner itself has a suggested retail price of $350.00, but the plug in card to hear the police encrypted channels will retail for $499.00. Don't expect the price to be much lower, maybe twenty dollars less because the Uniden actual price for retailers only allows a very small profit above wholesale price. To get the best profit a retailer needs to order 2500 units at a time.
My boss said to go ahead with the scanners, but we will not sell the digital boards, unless they become popular.

Aww. c'mon now.. he stated he works at a department store and it is NOT a specialty radio store. Do you honestly expect a department store to know very much about the digital systems that he is talking about. Heck he most likely knows more about it than I do since he just received the information packet from Uniden. maybe just excited he got it and want to share it with us. He shows enough interest in the hobby and product. Be glad that at least he will probably be the most informed employee concerning the item. You never know if that is the closest/cheapest place to buy it when they begin their deployment of it.

I think it is a very good post clearly stating that Uniden IS sending out information packets concerning their radios to their retailers. He talks of the MSRP, a quantity break for the units and even the fact that they do NOT plan on stocking the digital boards unless they are inquired about often enough.

Thanks Tom.

I love my WR-1550e. But it is an external unit not a card!
It works quite well on HF (I use a preselector anyway) but my main
purpose for this radio is VHF/UHF scanning.

The good old fashioned tuning knob is a good thing, but after I have
tried the various PC tuning methods I can see the benefit on that side
too. There are some things you can't do with a conventional radio but
are great on a PC.

Source record: 50626

>Does anyone know where I can get some info on scanning (esp police/public safety) in China, esp the Beijing area?

I would check with the U.S. State Department before considering taking a scanner to China ... and then, leave it home.

Several weeks ago, a number of Americans traveling as a group were arrested, and jailed without visitation for several days, in Bejing for taking an interest in China's internal affairs. Several came back to the U.S. with broken bones and serious injuries.

There is alot of tension between the U.S. and China, currently, involving both trade and arms negotiations.

I can assure you that being seen with a scanner in Bejing will not be as pleasant an experience as being caught with one in a motor vehicle in Michigan, Florida, etc. You will have NO rights in China.

Now that I've expressed an opinion ... you might find someone on the vhfskip list on Yahoogrroups.com who is familiar with low and mid band communications in Southeast Asia. There are several prominent list members from New Zealand, Australia and the Pacific Rim.

Have a good, safe trip, Wil. If you get a chance, visit the Yantzee River power project ... awesome!

My BC245 wont do 900Mhz Edacs. What is different about 900 ? Also use MDT's
on local 800 Edacs system. Anyone got any info on Edacs MDT's

820. Rear Window Defogger Antenna

Newsgroup: rec.radio.scanner
Date: 2002-03-17 12:17:27 UTC
From: a@b.invalid
Message-ID: <a721gn$6rv$1@plonk.apk.net>
Source record: 50636
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I've noticed that many late model cars incorporate the AM/FM antenna in to the vehicle's rear window defogger. I was wondering if anyone has any information on this matter. I have mildly experimented with this idea (I currently have my car radio antenna inductivly coupled (via a modified RadioShack glass-mount scanner antenna) to one of the power leads (via two alligator clips and a short piece of wire) of my rear window's defogger.

Currently, FM reception is good to very good, but AM is terrible (lots of electrical interference.)

I've noticed that vehicles which utilize this method of radio reception have a more complex series of traces on the window. These traces reminded me of circuit board antennas, and if anyone has any good links on that subject, I would appreciate any information.

I was thinking of making a more permananent installation of this type of antenna, using a capacitor to connect the center conductor of my coax to the defogger, and grounding the shield of the coax. I would appreciate any suggestions for capacitor values.

Finally, I have noticed no difference in reception when the defogger is on or off.

Thanks,

Dan

Hell, you can get a near mint 2006 for less than $285. A near mint
2004 goes for less than $200 shipped.

825. scanner broadcasting tip

Newsgroup: rec.radio.scanner
Date: 2002-03-17 15:01:03 UTC
From: mitbr <hmm@anywhere.net>
Message-ID: <Pc2l8.6081$9F2.2111@nwrddc02.gnilink.net>
Source record: 50641

For those of you who are using the Shoutcast server to broadcast your scanner on the net you can set up a chat room to be accessed from the Shoutcast yp directory or your mirc client very easily. To set up the text chat room via the 1-8-0 dsp place #scanner in the white box beside irc , if you are using the 1-8-2 dsp place the word scanner with no # sign in front in the white box labled irc in the yellow pages tab. I sugessted the chat room named scanner to get every one into a common chat room.Now when you click on the chat button in the Shoutcast yp directory beside your broadcast it will launch the chat room. You can use the chat room to chat with others about the hobby. Also if you havn't done so already put scanner as one of the genres for your broadcast and you will show up in the scanner directory on the Shoutcast directory. The url is below for this directory.
http://yp.shoutcast.com/directory/?s=scanner&st=gs&l=50
Want to broadcast your scanner on the net but don't know how.Please visit my tutorial on this topic,its easy to set up and 100% free.
Happy scanning!

I am selling my NIB 2006 for $375, so the 2004 is not a bad deal.

Why not get a 'y' splitter cable and tap into the antenna that way.
Also consider adding a small wideband preamp in line to compensate for
the 3db loss.

I'm sure this will work well for casual listening.

There are programs for the PRO-64 at
http://home.cox.rr.com/kplotkin/scanner.htm. I believe you can buy a cable
that works with the PRO-64 at Radio Shack. Ask for catalog number 20-048. It
comes with software but the software is not usable with the PRO-64. Package
price is only $15 so it's worth it just to get the cable.

Notice I said "Best Offer" :-) My friend sold his 2004 on e-bay for $335.00,
last year and I wasn't certain about what price to ask for.

I have no problem with it going out the door for $200.00 + shipping!

the going price for the pro-2006 is about $210.00 list and $190.00
on sale ... maybe people would pay so much for a 2004 ... but why ...

even THAT would be a bit excessive when you consider the faster
speed and features of the flagship of the pro-200X line ...and it's
usual price is only $210.00 and $190.00 on sale here ....

http://www.hammerheadtech.com/Merchant2/merchant.mv?Screen=PROD&Store_Code=HT&Product_Code
=Realistic+Pro-2006

buying thru established merchants (with a return privilege) is
highly desirable ... not to mention these 2006s have ALL the mods
(even slicer) done in a professional shop.
I have several pro-2005s and 2006s and most of them do poorly
with programs like MDTMonitor , mobitex and banapia ..but these
pro modified units provide slicer outputs which allow these programs
to work perfectly. A plus worth thinking about too.

cheers

Dan,

You maybe thinking of flex PCB material. I've worked in the industry and I don't think it would be cost effective to do that as the engineering costs to make up one or two would be prohibitive unless you want to market them. Most small shops who can and will do small quantities of PCB's , don't have the technology for flex PCB's.

There was a company making on the glass AM/FM antennas which had the wire embedded in the tape. I bought one years ago from JC Whitney. You stuck it around the inside of your window and tucked the cable under the dash. They have a web site, jcwhitney.com. but I didn't see this on the site. It may still be in the catalog.

You might experiment with the self stick foil made for alarm systems to put on glass. It has self stick terminals made for attaching wires to it. Once you're happy with the tuning, just put a little clear acrylic over to protect it. If you used a metal straight edge and a razor knife, you could make it thinner, hence not as obtrusive as the full width.

Another thought is to use the window defroster repair liquid and make up a stencil from tape and paint that on, assuming it will stick directly to glass. I'm not sure how to terminate it to the coax however.

839. Scanner reccomendation for 16 year old?

Newsgroup: rec.radio.scanner
Date: 2002-03-17 23:00:17 UTC
From: Jeff Lackey <jlackey@chartermi.com>
Message-ID: <D320D4737EB85CBB.D0FA8F66AEAB482A.F02005CFBBD44420@lp.airnews.net>
Source record: 50555

Looks like my son is going to get a shortwave radio and a scanner radio for his 16th birthday. I haven't checked out scanners in a while (I still use my old RS 2006 <G>) - what's a decent beginners scanner, i.e., good quality at a decent price? We're in a smaller town in Michigan, so 400 channels of storage isn't needed. However, good reception would be great - the signals aren't real strong around here and for now he'll have to use an indoor (i.e., telescoping) antenna (if there are any really good replacement antennas these days, that would be good info also.)

Thanks.

Jeff

The 2006 sold for over $350 new. I can't believe that the best scanner ever made is only going for $210.

That's correct. I just checked my reference software which has about 10 2004s sold in ebay. Average price is around $150. For a 2005/2006 the average price is around 225

I paid $360 for the 2006 in 1994. I still have the original receipt and the scanner is still new in the box. I bought three 2006s at that time and only used two of them.

If you don't need trunk tracking there are many good choices. I like handhelds because you can always plug in a speaker & a wall wart and they are as good as any base unit (open up a newer Uniden base & guess what's inside - the circuit board looks small enough to be a handheld!) 200-400 channels won't cost much more than 50, especially in the used market. A handheld that sells pretty cheap ($75 or so for a very clean one on Ebay) is the PRO-64. It has a good functional auto-search & self programming functions, it has respectable RF performance & a good scan rate.
Mine isn't for sale, but they come up on Ebay regularly. I think you get better RF sections in the units with more than the bare minimum number of channels. Radio Shack and Uniden both have many models that are similar but I'm quite familiar with the PRO-64. It isn't the best scanner ever made, but it isn't a $350 investment either.

Interesting note about such:
Floridas law reads "a scanner may not be permanantly mounted
in a vehicle.....
Wonder if that means a handheld laying in the front seat is ok?

'The best scanner ever made'? Boy, that's what I call going out on a limb. You've obviously never owned a REAL scanning receiver. I can think of at least 10 that make the 2006 look like what it is; a cheap Radio Shack 'scanner', albeit the best of a bad lot. To get a serious scanning receiver, you have to pay serious money. And US$210 ain't gonna do the trick Jim. Try an Icom R-8500 if you want a REAL scanning receiver (sorry, I hate the word 'scanner' as it conjures up the sort of cheap & nasty efforts made by Uniden et.al.). You'll be glad you did. Oh, and by the way, anything with gaps doesn't count ;-).

This rhetorical question constantly appears hypocritically in a forum supposedly designed for DISCUSSION.

So there you have your answer. It's not hostility, it's an open forum where discussion of such topics is it's primary goal, pro or con, good or bad, agree or disagree.

There is really not much substance here now as it is. Can you imagine what it would be if everyone just hit their delete key?

Hi there,
Can anyone tell me if the BC3000XLT had a battery pack problem similar
to the 200xlt where the low battery beep and blink warning would come on
even though the battery was not low?...
I charged the pack up for about ten hours and turned it on and found
that the low battery warning would come on right away but the scanner
would still work for a few hours before the battery would die?
Does theis just mean I should replace the battery cells or maybe the
whole pack completely?..
I have only had this scanner for a few days so I am not that familiar
with the battery operateion.
Another thing does anyone else find the audio kinda bad in this
radio?..just seems not very loud or clear?...
Thanks for any help you may provide!
please e-mail me directly so I get your reply!
Thanks-Russ

858. BC100XLT repair

Newsgroup: rec.radio.scanner
Date: 2002-03-18 03:58:16 UTC
From: ballgofar@retardsrule.com
Message-ID: <302f180.0203171958.1ccc4c7f@posting.google.com>
Source record: 50574

Can you tell me how to find this Q201 everyone seems to be talking about?
I have a BC100XLT that has all the symptoms of this seemingly coomon problem yet I dont know how to locate it on the board. Any help would be greatly apprciated. Someone HAS to have done this repair?! PLEASE HELP if at all possible.

Thanks,

Paul

Uniden/Bearcat BC200XLT Portable - Loss of Audio and Dial Lamp
If you can program frequencies into your BC200XLT but there is no audio and
the green backlight no longer functions, a tiny transistor may have failed.
Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY).
Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT.
Its main purpose is to switch off power hungry stages of the BC200XLT when
the CPU thinks the NiCd voltage has fallen below a threshhold. That's an
attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black
multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in
the scanner drawing too much current through it. In one case, capacitor C36
shorted. It's a 220 uF 10v electrolytic, located on the component side of
the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he
substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass
Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail

Well, if you can still find them, the PRO-76s are dirt cheap, 200ch,
with pretty good sensitivity. No 220MHz, but unless you've got a lot
of milair stuff up there, that isn't likely to be too exciting.

>However, good
>reception would be great - the signals aren't real strong around here

I get my best overall results from the small groundplane I made for my
ham HT. Click on the picture on my website for details. When I have
a place to set it up outside, I use a copper pipe J-pole for 2m ham,
but it's pretty darn good for scanning too.

No, not 'better yet'. I have sold one of my R-9000's, as they are pretty old
technology nowadays. After all, they were really only an R-71A and an R-7000
in the one cabinet, with a CRT display and 1000 alpha-numerically labelled
memories. The performance of the R-8500 is actually better than the R-9000,
as is the NRD-545, which is what I am using forr HF. If you want an R-9000,
I can let you have my other one, complete with an SP-20 speaker, for US$2500
plus freight. As they currently sell for around the US$12,000 mark, that has
to be a good buy. But don't let the CRT die, as Icom are no longer able to
supply replacements. Still interested?

Just curious, what price did you pay for them? Have you tried them out yet (I know, not without a license).

Interesting choice of terms.....

However, I think some of it may be the "My scanner is the bestest" syndrome.

No one wants to admit they made a wrong decision. Their decision on
what type of scanner to buy reflects back on them, so they "defend"
their decision, ergo, the scanner of their choice.

I see this same type of argument in other Newsgroup forums.

I am sure not all of the scanner debate boils down to this theory, but
I'll bet some of it does.

$89 for the pair [on sale, regularly $99]. I didn't like the audio quality at all -- muddy and full of static, even at short range [I know, it's fm, but still, a lot of static]. The range, even on high power, wasn't much better [if at all] compared to a pair of cherokee 460's over identical distances and conditions. They went back [another reason to be glad I bought them at an office depot...].

Doesn't the Florida law go on to say something about unless you are a legitimate news organization? The newpapers are the first people to say that in gathering news, they should have no special treatment that a regular Joe doesn't have. I have never heard of anyone prosecuted for using a scanner improperly and not being a legitmate news organization. And there is no defintion of legitmate news organization in the statute, correct?

To prevent any misunderstanding, I'd put it in the check-in luggage.
This has nothing to do with terrorism. There are a few portable
electronic do-dads which are capable of interfering with aircraft
navigation systems. While most, maybe even 99% of all these portable
devices are benign, the cabin crew doesn't have any way of knowing
what will cause trouble and what won't.

If you want to be sure you won't get hassled, check it in your
luggage.

Crack the algorithm? That may take time. But they will know
something's on the air.

I say this only because my employer's telemetry system was interfered
with on several occasions by something that had to be a Frequency
Hopping Spread Spectrum signal. It was strong enough that we could
clearly see it spiking around on a service monitor.

We were not amused. Just be advised that some folks really do have
mobile DF setups to hunt down sources of interference. My employer is
one of them. Use the least amount of power necessary and use
directional antennas. There are folks out there who really do care
about rogue signals.

IMHO, you'd be better off on narrow band gear than a FHSS system. The
former doesn't arouse too much curiosity, but the latter WILL.

No parts are available from National Parts. I've heard someone on the net who has an aftermarket LCD pannel. This is the most offen replaced part.

Another issue is E-Bay. It's unrealiatic to use e-bay as any form of price gage.
E-bay is an auction a virtual one but an auction just the same we all been to the real live ones. It's an emotional ride. And quite offen we pay more for an item MUCH MORE that we planned or the item is really wort at a FAIR MARKET VALUE. I know been there done that...

But to try to base a price on e-bay is just silly. As we all know the WIDE varation between prices is proof that someone will pay $75 for a PRO-2004 and the next day $350 for one.

Just my .02

You will only pay MUCH MORE on Ebay if YOU bid that amount, if you bid a high price, then expect to pay a high price.

well thats one possible view .... more realistic speaking " ebay " is
THE price determining mode of current times. If an item consistantly
sells on ebay for $200 then that is what a person can get for it and
what it's worth, period. It doesn't matter what you " might " luck on
it for at a swap meet .. even if YOU buy it for $75 ..you can still
sell if for $200. That is what it is worth ... not what you stole if
for.

>
>But to try to base a price on e-bay is just silly. As we all know the
>WIDE varation between prices is proof that someone will pay $75 for a
>PRO-2004 and the next day $350 for one.

actually this thought isn't up with modern times either. Have you
ever heard of the Foothills Swap meet ...?? It is / was the largest
electronic swap meet in the world ..! It is held all summer long at
Foothills College in the silicone valley of coastal California.
(every weekend)
It used to be the greatest electronic windfall since popcorn ..!
ALL the latest and most exotic surplus and ham gear was always
available there. The event was held at Foothills because it is in the
electronic toy mother lode ...in silicone valley. WELL ....
that was then ..NOW (in the last two years) ..it has fallen into
disarray ... this because ALL the good stuff is being sold on ebay and
other auction houses and there is NO need to leave your living room
to get the same stuff. Also ..ebay has actually driven DOWN the price
of most sold stuff sold at Foothills. The reality is that Tek scopes (
as a typical example) that sold at Foothills for $600 to $800 each ,
are selling on ebay for $250 now. HP spectrum analyzers that sold
regularly at Foothills for $850 (the price fixed by groups of local
vendors to maintain profit levels) now sell on ebay in the $450 to
$550 range. This because those same vendors have to compete with the
whole world now and it drives the prices down.
There can be a certain amount of emotional buying on ebay but it

isn't the norm and doesn't happen as often as you would want. I have an ebay rating of nearly 300 and can say from personal experience that emotional wild budding is VERY rare ... more the case is (in reality) multiple scmemes to drive the prices donw by last minute torpedo bidding. The act of bidding only at the last minute to get the least high price and be the last , highest bid, is the norm on 99% od all sales. If you sell on ebay , you know what I'm talking about. I wish I could run across those emotional bidders that you mention , but NEVER have.

like it or not ..ebay is a phenonom of the current times ... maybe even the example of all auctions of the future. In my own experience , it provides ME access to items I could NEVER find elsewheres ..and at prices set by the public bidders at large. There bidders , nearly all , trying to (like you) get something for nothing.

my .02 cents worth also ..

>
>
>Just my .02
>
>JM

BTW: do a ebay search of pro-200Xs for current and closed out auctions and you will see that there has been NO emotional wild bidding at all. The prices ALL average in the same ballpark (as another poster has already noted) .... what " could be " and " what is " are quite different things.

NO, but I've heard of FOOTHILL COLLEGE that isn't in a RUBBER (Silicone???) VALLEY but in the northern edge of Silicon Valley and isn't in COASTAL California either, but on the inland side of the coastal range, separated from the coast by a mountain ridge of a couple of thousand feet and near San Francisco Bay.

I think you're getting carried away. The swap meet had gone downhill well before eBay became as popular as it now is. Going to Foothill you'd find 90% garage sale stuff and if lucky 10% electronics stuff. A lot of the JUNK for sale was the dregs of computer companies, having little to do with radio or electronics in the sense that those who grew up in the 1950s 60s and 70s were used to. People seemed to think that garden tools, cheap import household tools, old clothing and the like were appropriate for an electronics swap meet.

Four or five years ago I got tired of having to sort through all the crap to fine so little that had anything to do with electronics. I rarely bother going there anymore and consider it amazing if there are 3 or 4 sellers who are selling anything remotely related to "electronics" and "radio" as it was many years ago.

The PRO-2004 is thought by many to be a better scanner than the 2005 and 2006. The case is metal and the performance comparable if not a bit better according to many.

If you don't like the price somebody asks, don't attack him or the price, just move on and DON'T BUY IT!

I think a lot of people have too much time on their hands!

886. Pro-93 At The Races, and Undocumented Feature

Newsgroup: rec.radio.scanner
Date: 2002-03-18 20:47:42 UTC
From: gwheeler@vmguys.com
Message-ID: <e8bcf171.0203181247.6769fdea@posting.google.com>
Source record: 50502

I took my Pro-93 to the races in Sebring, FL, this weekend. I wanted to share a couple of things. Note that this was all done using conventional frequencies -- there are no trunked systems at the race track. In fact, I didn't press the Trunk button once all weekend.

I found the global attenuator was very good when I was near the pits. That's where all the teams have their repeaters, and race control is also in that area. In the past, I have swapped the normal antenna for a stubby one to reduce the signal strength and avoid overload problems. In this case I just turned on the global attenuator and it worked great!

When at the track, one of the first things I need to do is capture all the frequencies I can. Then I can filter out the junk, and categorize the good stuff. In this case I also had an Optoelectronics Scout with me, so by watching that for a while I could see that almost all the radios in use were in the same band -- 161 to 164 MHz, more or less. I used the range-limited search to watch for activity in that range, and saved whatever I found into the lower banks using the Func-Enter command. I used banks 0, 1, and 2 for captured frequencies.

I was able to use the alpha tagging to help a lot! First thing I did was tag the banks, so I could remember what I was putting where. I tagged each frequency when I was able to figure out what it was. In some cases all I knew was it was a car, but not which one. By just tagging it as "CAR" I knew it was something I had half-recognized. Sometimes I would hear the driver's name, and I would add that to the tag. That allowed me to recognize the same car again, even though I still didn't know which one it was. And then, if I was finally able to identify a particular car, I tagged it with the car's number and make (e.g. "38 AUDI"). (These cars are driven by teams of several drivers, so it didn't make sense here to use the driver's name.)

I reserved some other banks for various categories -- 3 for media (TV and radio broadcasts), 5 for aircraft (there is an airport right next to the track), 7 for local police, fire, and EMS, 8 for miscellaneous trackside stuff, and 9 for IMSA channels -- race control, ops, medical, etc.

One thing I really needed was a way to copy a frequency from one of the low banks, where I initially placed it, into a different bank appropriate for its category. I found what I believe is an UNDOCUMENTED FEATURE of the radio: If you're looking at a frequency stored in a channel, pressing Func-Tune will put you into tuner mode set at that frequency. (You then need to press Pause fairly quickly so the tuner will remain at that frequency.)

So, to copy a frequency from one place to another I used this sequence: find the channel in question, either manually or using Scan, press Func-Tune-Pause to copy that frequency into tuner mode, press Func-Enter to copy it into a different bank (or press Func-Pgm to assign it to a specific channel). Sure saved a lot of typing. Unfortunately, the alpha tag is not copied to the new bank -- if anyone has a better way to do this I'd appreciate hearing about it.

I found another use for the same feature -- it can adjust a saved frequency. Sometimes the frequency I captured in my initial scans was a little off, and I would notice some distortion in the voice. So, I would press Func-Tune-Pause to copy the frequency to the tuner, then use the up and down arrows to tune to adjacent frequencies to find the exact one. After that, pressing Func-Pgm would display the channel it had been copied from, and pressing Enter would assign the adjusted frequency back into that channel.

I have uploaded my final results as a P93 file to the web site in case it's useful to someone. See http://groups.yahoo.com/group/PRO-93 and look for the files section.

Gerry

I found out today from Uniden,
Availability: October.
Price not cast in stone yet, this is most recent expected price.
Scanner BC250D Handheld, or BC785D Base/Mobile: $350.
APCO25 Digital Card: BCi25D: $329.

>would be monitor the calls. Also, your service monitor was it an IFR?

First, RS doesn't sell a real FH phone. They sell multi-channel
phones that can be redirected to a new channel each time it's used.
That's not exactly frequency hopping. It's very easy to monitor
cordless phones if you really want to. Just buy another phone of the
same model number and you'll be able to listen in to your heart's
content.

Second, yes, one of the service monitors was an IFR. We also had a
Tektronix 494 spectrum analyser trained on the signal to help us find
and peak it.

That's about where I would expect them to be. When I saw the post I was thinking $125 - $150 would be fair for a good condition to mint, $150 - $200 for a very mint to new in box. I wouldn't worry too much about speed or channels compared to the 2005/2006's since the 2004 is capable of just about the same once you dig into it, clip this, replace that. About an hour's work for someone that knows the rigs. About a half day for someone who doesn't.

I don't have my RS catalogs handy, but I believe it was $399 or $419
regular and $369 on sale. Same as the 2005, more or less. I'm thinking
they both started at $419 and ended up at $399 a few months after
release. Anyone recall?

Any antique Radio Shack catalog collectors out there who can look it up? I'd guess the paper might be pretty yellowed but might still be readable. It should be a few pages before the Atari 2600 accessories.

Good Guy, Dan Conti, Report!

I just purchased a Yupiteru MVT-9000 MKII scanner from Dan Conti. I sent him payment via PayPal. It arrived quickly, and was packed very well. The scanner, box, manual, case, etc, looked brand new, and it works perfectly!

I would not hesitate to do business with Dan again, and highly recommend him.

That's a no brainer!!

Get the Alinco DJX-2000. It has all of it's features built-in with no need for expansion slots. If you live in Canada order it from Javiation and get the "E" model, not the "T" model.

i have radio shack pro-60 scanner it receives the 30-
512,760-824,849-869,894-999.987 range. I don't get
any cells nor am i able to get the OPP(ontario provincial police)
since it dosn't have the ctcss mod or crystal whatever you call it
Is this scanner worth more to the USA cause you are able to get police
and i am not. what can it be worth, cause i'm mostly interested in
cell and opp.

So if you guys no more than i do please help i'm looking to sell this
scanner
for one that i need.

Take care!

The 20-048 cable definitely works with the 64.

If you build your own cable, you only need two wires: the ones to the
barrel and ring of the stereo plug. Also, don't include the resistor
shown in some schematics.

>"radio" as it was many years ago.

well ....don't attack the messenger. I'm only repeating the
laments of " huge " dealers that no longer go to the swap meet ..
because " all the best stuff is sold on ebay now and little
or none of gets to the meet anymore. "..! Consider that " other "
people may not have shared YOUR appreciation for certain types
of items and felt differently about it than you. You are entitled to
your interpretation of things ... others may disagree " strongly "
with your perspective. One particular person (that I know) lived and
breathed the swapmeet and the telescope meet down south.
He still goes to the southern meet ...but has abandoned Foothills
for the reasons I mentioned. His life is less for the experience now,
and THIS remains the personal observations and experience I have.
(and a reflection of HIS thoughts of how it got that way)

>
>The PRO-2004 is thought by many to be a better scanner than the 2005 and
>2006. The case is metal and the performance comparable if not a bit better

I agree about the shielding .. in general... but both scanners have
the same (excellent by today's standards) internal shielding. The
newer models have faster cpu clock speeds and thus faster
channel scanning speeds. This speed translates to much faster search
speed (up to 100 cps with the 2006 / probe) when using computer
control too. (the faster CPUs seem to track much better) . Most of
my pro-2005 /6s use the opto computer boards ..I have no remaining
pro-2004s. Another problem with the older 2004 is the severe cases of
circuit connector arthritis they seem to have. Tho, this will probably
show in the 2005 /6s eventually too. In my own experience the pro-2006
more than the 2005s and WAY more than the 2004s seems to do
a better job translating the digital outputs of a slicer disc tap.
None of my 2005s do well at all on several of the disc output decode
programs ..and only a couple of several of the 2006s preform well
on these same programs. (ie: mdtmonitor, mobitex, ardis, banpaia)
These are my own experiences..your's may be quite different. Even
location can play a role in some of these problems. In my location ,
humidity is nearly non-existant .. much of the year.. (mid central
valley) ... tho helpful in ways ..it too can be detrimental to my
equipment , drying out the rubber and silicone parts and causing
lots of other problems.

I paid $399 for my 2005 in 1989. Sold it on ebay 10 years later for $375
and just bought another one on ebay this past year for $200 :) I missed it
and had to have another one :) So I guess the fair market value of the
2005/2006 has come down the last 10 years

glock45srock@aol.comCANNDHAM (Matthew W. Este) writes:

>Just curious, what price did you pay for them? Have you tried them out yet (I
>know, not without a license).

License? What license?

The GMRS simplex frequencies in my area are becoming almost as congested as the
FRS channels. Lots of beeps, bloops, and calling noises.

Me thinks this battle has been lost. Next, expect the FCC to "solve" the
problem of unlicensed operation by eliminating the licensure requirement. This
is exactly what happened with CB and, later, VHF interant business frequencies
(now MURS.)

>Floridas law reads "a scanner may not be permanantly mounted
>in a vehicle.....
>Wonder if that means a handheld laying in the front seat is ok?

Yes, IF it is self-contained. In other words, a handheld scanner with NO external power or antenna connection IS legal. Adding either of these components makes it a "permanent" installation and thus illegal.

Stupid, I know.

In the real world, though, most cops could care less...unless you give them an attitude or are making a nuisance of yourself with the scanner.

I used to live in Florida and was stopped twice. Once for speed warning and once for having my tag light out. In both cases, there were multiple scanners visible and operational (I even heard him call in my tag number!) Vehicle had no fewer than 4 antennas. Neither cop said anything about the scanners.

In short, don't make it an issue and the cops won't, either. Trust me, Florida law enforcement has MUCH more pressing concerns than scanner laws to worry about. The place has become an overcrowded cesspool of crime...which is why I moved outta there!

922. BC2500XLT - What is it worth?

Newsgroup: rec.radio.scanner
Date: 2002-03-19 20:33:17 UTC
From: pat.szuch@swagelok.com
Message-ID: <761a8bd8.0203191233.5e9c487e@posting.google.com>
Source record: 50538

Hello,

I have a BC2500XLT scanner (with cell mod) that I am considering
selling.
It's in like-new condition. But I have no idea what these things are
worth these days... Anyone had recent experience buying or selling a
similar hand held scanner?

Thanks!
Pat

923. Is Pro-2036 = BC890XLT?

Newsgroup: rec.radio.scanner
Date: 2002-03-19 20:41:45 UTC
From: JELo <jelo@nospammail.com>
Message-ID: <3c979fee_4@corp.newsgroups.com>
Source record: 50539

Picked up a used Radio Shack Pro-2036 for $50
no manual, needs a new back-up battery.

Is the Pro-2036 TRULY a Bearcat BC890XLT or just
similar to it? Will the 800MHz BC890XLT resistor move
mod work on the Pro-2036 or not?

Also, I figured out the special key sequences of:

2-9-E-PowerOn === clear programmed frequencies
2-9-Scan-PowerOn = loads 1-31 with test frequencies

ICOM R-2, for around $140 isn't bad, and has a computer interface. Receives well and is sturdy.

Hello,

I have a Uniden BC2500XLT scanner for sale. Scanner is in like-new condition, including leather case, NiCad pack, wall charger, and original box and manual. The scanner has the cell-mod (continuous 800mhz coverage). This is a 400 channel, 25-1300mhz scanner. I am asking $150.00+shipping. Please email if you are interested or have any questions.

Thanks!
-Pat

I'm afraid that the battery packs that it takes really kills the
resale value of this radio. Example: I may have to rebuild the packs
at a cost of $30 a piece. So right there is $60. I really don't know
what they go for.

932. Re: FS : BC2500XLT handheld

I used to live in a high crime area and was worried about my antennas
advertising "electronics" Available....

I put a "T" in the fm radio antenna cable and hooked the scanner
up with it. Worked quite well.

937. streaming scanner broadcasts for Seattle?

Newsgroup: rec.radio.scanner
Date: 2002-03-20 02:16:22 UTC
From: Thomas Field <coffee@speakeasy.org>
Message-ID: <3C97F0F7.B81980CF@speakeasy.org>
Source record: 50452

Hello,

I have been searching online for streaming scanner
broadcasts (RealAudio, MP3, other) online - and I
have been having more difficulty than I expected.

I found this site...

http://www.apbonline.com/scanner/index_blank.html

...but the links are not working even though the
PlugIn appears to load correctly.

I finally found some working streams at:

http://www.policescanner.com/police.stm

But no Seattle stream - can anyone recommend
any other sites similar to those above?

CAREFUL

Those folks (read corrupt politicians)
don't like citizens like you listening in on their
radio conversations and will likely get you jailed.

Possession of a bullet down there will get you 20 years.
I'd hate to imagine what a scanner might get you.

Source record: 50459

I spent a LOT of time in China (PRC - The People's Republic of China. call it by it's proper name and the local folks will treat you better) doing some high tech work. Listening in on police, government, or military broadcast
is a very serious crime there. Getting a two way radio license, even for a radio
manufacturer, is about as tough as getting a concealed carry gun permit in NYC or Paris.

Violating the radio security laws will get you years in the gulag and no help from the US embassy! Many other countries have such similar laws - all designed around protecting their 'security'. Tread with care!

China strictly enforces it's security laws, including the banning of 'transceivers', scanners, and GPS receivers. AM/FM broadcast receivers are Ok. Cell phones and pagers are OK and quite common. Two way radios and scanners are a NO-NO.

They're just waking up to computer controlled radios such as ICOM's PR1000 or WinRadio's products. Even a personal size shortwave radio raises some eyebrows in customs. If you arrive on a jumbo jet at any of the large international airports (Beijing, Shanghai, Cheng-Du, Xian, etc), chances are there will be so many people deplaning that customs will not even bother looking in your bags. Tote a bunch of cardboard boxes, however, and they do stop you to look for dutiable items. Arrive looking like a 'hippie' (disheveled and carrying only a backpack) and you will be asked to open your bags and empty your pockets. Drug laws are also draconian (like Singapore and Malaysia where possession of more than 15 grams of anything mandating a death sentence).

Don't forget to get a visa BEFORE you go - your travel agent can help. Rumors to the contrary, you cannot get a visa upon arrival in the PRC. The airlines will not let you board without a visa. You can arrive in Honk Kong without a PRC visa, but you will generally need to stay there for a day or two days for your PRC visa to be approved - if you have a letter of invitation from an in-country organization.

Tread with care! The PRC laws are a bit draconian. I am a pilot and I was able to fly freely in-country, but until 1995 was not able to drive! Our phones at
the hotel were listened in on. Our faxes were intercepted. Anything copied or printed in the hotel 'business office' was copied to the local security folks. We had to use the encrypted ARINC radio in
the aircraft and our on-board encrypted aircraft satellite phone for any real private
conversations.

With all that said, it's a wonderful place to visit - enjoy....

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scannner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute to this web page.

950. Will WinRadio give me an IF (pre discriminator) output?

Newsgroup: rec.radio.scanner
Date: 2002-03-20 14:42:05 UTC
From: johnfofawn@hotmail.com
Message-ID: <d89364bd.0203200642.7e86a0e2@posting.google.com>
Source record: 50466
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.scanner,alt.radio.scanner

Hi,

I would like to use WinRadio or something like it for processing digital signals. I would like to get an IF output (ideally digitized) that I can then do signal processing on.

What are the output options on WinRadio? Can you get IF output? If not, can you get discriminator output? Or, are you limited to audio output?

Thanks,
John

> Name: NET SCANNERS.url
> NET SCANNERS.url Type: unspecified type (application/octet-stream)
> Encoding: x-uuencode

Thanks for the link to the Netscanners page -

http://www.angelfire.com/on/netscanners/

- and the Yahoo Group and its bookmarks at:

http://groups.yahoo.com/group/livescanneraudio

There's a Seattle ATC that works but the only
Seattle PD link around appears to be...

http://www.apbonline.com/scanner/seascanner.html

...and this is the one that isn't working on my
iMac. Looking at the source and trying to open
the link directly, it looks like this is the problem:

http://tm.intervu.net/template/smirror/ivtemplates/apbonline/apb.rpm?stream='scannerlive_s
ea';prestream='scanner.rm';xtn=.rpm

Intervu's site redirects to Akamai (who bought them) -
and I suspect the problem is there [which will suck
if you are dependent on Intervu content like the
apbonline site].

Looking through Google, it looks like every once
and a while, someone sets up a MP3 stream off
their scanner [this happened during WTO] - I'll
keep my eye on the Yahoo Group to see if a Seattle
stream pops up and maybe the apbonline issue is
temporary [or I'm doing something really stupid].

Doesn't the UK version have a stepping rate that is not compatable with US monitoring.

There are a lot of secondary uses for such a radio, but it's only going to be worth $10-20, for someone who happens to need one. Take it to a local auction house and have them sell it on consignment in an estate sale. You might get lucky (like a dozen I've seen locally) and have some rube bid it up past the cost of a brand, mediocre bakelite table radios & old color TV consoles seem to attract old guys who don't know jack about them but think they are worth big bucks.

```

Maybe he figures if he posts the ad often enough we'll all get so tired of seeing it we'll all chip in and give him the $360 just to shut up about it.
If it's so great Jim, put it up for sale on Ebay with no reserve and a $1 starting bid. If it's what you say (and say and say and say) it is, you'll have no trouble getting what you want for it.
How about some real sharp, clear photos of the scanner, the box and of the manual still in it's undisturbed, still taped shut wrapper? If you had other 2006's when you bought this one there never would have been a need to look at the manual, now would there. A couple of macro focus photos of the knobs to show there is no dust or dirt hiding where a q-tip won't go? Now those would make a good Ebay ad. You might even get $400 for it!
You want to sell it to someone close enough to come and look at it in person, cough up the lousy $5 to advertise it in the local pennysaver.

Isn't it amazing when you ask a fair price for something you don't have to make any wild claims & repost your ad 17 times? You just sell it right away.

Probably somewhat less than what RS charges when they are on sale. The non-sale price is $250.

Amateur Radio Newsline Report 1283 – March 15, 2002

Amateur Radio Newsline report number 1283 with a release date of Friday, March 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring at the FCC should not impact on Amateur Radio and a first for the Dayton Hamvention. These stories are first on Amateur Radio Newsline report number 1283 coming your way right now.

(Billboard Cart Here)

**

REGULATORY ISSUES : FCC REORGANIZES LATER THIS MONTH

A reorganization of the Federal Communications Commission is set to become final later this month. This, as the agency stresses that realignment of responsibilities between various bureaus will make it more efficient and help it better respond to a changing technological marketplace. Amateur Radio Newsline’s David Black, KB4KCH, takes a look at some of the changes.

--
It’s an independent government agency that reports directly to Congress. It’s mission is to regulate communications. One of the services it oversees is Amateur Radio, but most observers of the reorganization of the Federal Communications Commission see little impact on hobby communications.

As part of the reorganization a new Media Bureau will combine the duties of the current Cable and Mass Media bureaus. The goal of the combined bureau? To treat competitors of multiple entertainment delivery systems equally and consistently. This includes broadcasters, cable operators and satellite service providers to name only a few.

Other changes include a renamed Consumer and Governmental Affairs Bureau. Also, a realigned International Bureau still will handle satellite licensing but most policy issues will now be the domain of the newly created Media Bureau.

These are just a few of many changes taking place. Most appear aimed at commercial interests. For ham radio, C-B, G-M-R-S and most two-way radio users the shift will probably be transparent. In other words, for these spectrum users and most others, it looks like business as usual within a soon to be restructured FCC.

From the South-East Bureau in Birmingham Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline. Don.

--

Congress endorsed the plan late last year. The FCC then approved the overhaul in January. The changes will take effect March 25th. You can read more on the web at www.fcc.gov. (ARNewsline (tm) from published news reports)

**

RADIO LAW: FCC REFUSES TO SIDE WITH CB'ER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--
Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its preview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create. (W5YI Report)

**

HAM RADIO RIGHTS: NM. AND W.VA. JOIN THE PRB-1 BANDWAGON

The ARRL Letter reports that New Mexico and West Virginia have become the 14th and 15th states to adopt pro Amateur Radio antenna bills based on the limited

federal preemption known as PRB-1. Amateur Radio Newsline’s Jeff Clark, K8JAC, reports:

We have this report:

--
In New Mexico Governor Gary Johnson signed House Bill 314 on March 5th. This, after it easily passed both houses of the legislature last month with just two opposing votes during a short session that typically only deals with appropriations bills. Called New Mexico's "Emergency Communication Preservation Act" the measure was sponsored by State Representative Mimi Stewart and Senator Ramsay Gorham. It stipulates that municipal or county ordinances regulating Amateur Radio antennas cannot obstruct or preclude amateur radio service communications. Also, that such ordinances shall reasonably accommodate amateur radio service communications.

Here in West Virginia Governor Bob Wise signed House Bill 4335 into law on March 7th. The bill provides that antenna structures may be erected at heights and dimensions sufficient to accommodate amateur radio service communications but does not include a minimum regulatory height schedule. The measure also exempts Amateur Radio antenna towers constructed prior to the effective date from subsequent zoning regulation changes.

From Charleston West Virginia, I’m Jeff Clark, K8JAC.

--

In signing the West Virginia bill into law, Governor Wise, whose late father held the call sign W-A-8-A-Y-P, also proclaimed March 7 as Amateur Radio Operators Appreciation Day across the state. (ARRL)

AMERICA AT WAR: NEW TERRORISM ALERT SYSTEM

The United States has a new color-coded terrorism warning system. It was revealed on Tuesday, March 12th by Homeland Security chief Tom Ridge.

The five-level system is a response to public complaints that broad terror alerts issued by the government since the Sept. 11 attacks raised alarm without providing useful guidance. The lowest-status warning is green, followed by blue, yellow, orange and red as the perceived dangers intensify.

As the terrorism warning system was unveiled, Ridge said that the nation is on yellow alert. This means that the United States is facing a significant risk

of danger but not the highest stage.

The alert system is in force immediately for federal agencies, and Ridge is urging state and local governments to adopt it, too. It will be subject to a 45-day comment period, after which it probably will be revised. It's not known what part if any Amateur Radio will play in the new enhanced terrorism alert scheme. (Published news reports)

**

ENFORCEMENT: TAKE THAT UNCOORDINATED REPEATER OFF THE AIR

The FCC has told the operator of an uncoordinated North Carolina repeater to stop interfering with a coordinated machine, even if it means immediately taking his system off the air. This is the edict handed down to the operators of the NY4X repeater by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH.

--
Hollingsworth: " We also notified Richard Howell, NY4X, of Greer South Carolina and John Parker, AG4AZ, of Brevard Norrth Carolina that upon reciept of the letter, the NY4X repeater that they operate had to either shut down, obtain coordination or submit a detailed plan to the Commission to prevent interference to the KU4OL [repeater]."

"Now this interference has been going on for quite some time. We notified Parker and Howell back in November that something had to be done. Nothing was accomplished in regard to coordination and nothing was done in regard to the interference."
--

Hollingsworth letter says that Howell and Parker had more than ample time to fulfill their obligation under Section 97.205 of the Commission's rules. And late word is that the repeater has been shut down. (FCC, RAIN)

**

ENFORCEMENT: TAKE THAT BROKEN REPEATER OFF THE AIR

The NY4X repeater is not the only machine currently under FCC scrutiny. Another one is in Northern California. This one is having technical problems and is causing interference to machines on adjacent channel pairs. Again, the FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We notified Wendall Peterson of Walnut Creek California, operator of the K6POU repeater that more than enough time has elapsed for him to correct the technical and control problems with the repeater. His earlier response to our inquiry showed that the bandwidth was indeed so wide that it caused problems to two other repeaters. We have gotten complaints about that. And the repeater system is just not operating in accordance with good Amateur practice."
--

Hollingsworth says that his office expects the problems with the repeater to be corrected or that the machine will be taken off the air. He also gave Peterson 20 days from the date of his letter to respond. (FCC, RAIN)

**

ENFORCEMENT: THE RESPONSIBILITY OF REPEATER OWNERS

The FCC enforcement involving the NY4X and K-6POU repeaters are just the latest in a series of actions aimed at cleaning up the problems that have been plaguing the F-M community. Whether it's an uncoordinated repeater causing havoc to a coordinated machine, or a long established system in need of maintenance, the FCC's Hollingsworth says responsibility comes with repeater ownership:

--
Hollingsworth: "We want to emphasize that repeaters are voluntary. Nobody has to put one up. But if you do put one up you have a responsibility to maintain it, to get coordination if that's necessary, and to operate in accordance with good Amateur practices, especially if other repeaters are being detrimentally affected."
--

In reality, the only things the FCC is asking of those who own and operate repeaters is to be good neighbors and to adhere to the proper technical standards. In this way, the repeaters themselves can better serve their service area and the ham radio community in it. (FCC, RAIN)

**

RESCUE RADIO: KNOWING WHERE YOU ARE IN THE MID WEST

If you drive the highways and by-ways of Kentucky, you need never worry again about where you are. And if you get in a bind, rescuers will be able to find you. That is, if you are a ham radio operator equipped with a mobile APRS station. Jack Parker, W8ISH, of Amateur News Weekly, says that in his part of the world it is a mode that is truly coming of age:

--
Good news from the Kentuckey Automatic Position Reporting Society" their network of APRS digipeters is growing like well bred Kentucky Race Horses.

According to Brian Walker, KC4FIE, several new sites will be coming on line very soon. New digi's are planned for Grand Rivers, Morgantown, Owensboro, Lawrenceburg, and Dry Ridge to name a few.

The Murry State University club has added a digipeter and two stations along the Kentuckey – Tennessee border have extended APRS coverage into that state. These efforts effective extend the Mid-West network of APRS digipeters established by the Tri-State Working Group in Ohio, Indiana and Illinois.

If you need more information on the Automatic Position Reporting System just check the APRS Working Group website at www.tawg.org.

Reporting for Amateur News Weekly, this is Jack Parker, W8ISH.

--

With interest in A-P-R-S growing and ham gear that includes the mode as a standard feature, look for a defacto nationwide network to be in place by the end of the decade. (ANW)

**

HAMVENTION 2002: HAM TESTS WILL BE AT THE HARA

The Dayton Hamvention has asked that we pass along a correction to some information in its recently mailed pre-show brochure. The pamphlet incorrectly lists Meadowdale High School as the venue for Amateur Radio license exams. This is incorrect. The Hamvention says that all license exams will be held at the HARA Arena Hamvention site. (Hamvention(r))

**

HAMVENTION 2002: QCWA BANQUET

And attention QCWA members. This years annual banquet in conjunction with the Dayton Hamvention will be hosted by the South West Ohio chapter and will be held on Friday, May 17th. The venue is Alex's Continental Restaurant near Miamisburg. Starting time is 7:30 P.M. and reservations are required.

This years speaker will be General Raymond Moorman. He will be talking about the United States Air Force Museum and plans for the upcoming Centennial of Flight celebration in 2003. For more information and to make reservations please contact Ed Sonnanstine by e-mail to EdSonny@aol.com (QCWA)

**

CONVENTIONS - UTAH: UTAH HAMFEST

The 2002 Rocky Mountain Division ARRL Convention and 2002 Utah Hamfest will be held July 12th to the 14th at Ruby's Inn at Bryce, Utah. The venue is near Bryce Canyon National Park. For more information please visit www.utahhamfest.org on the world wide web. (Utah Hamfest)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are being solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held this September in Denver, Colorado. Presentations will also be publicized in the Conference Proceedings. Submission of papers is due by August 5th and in-person presentation at the conference is not required for publication. Conference registration and additional details are available on the web at www.tapr.org/dcc (TAPR, ARRL)

(5 sec pause here)

**

NAMES IN THE NEWS: HELPING HAND NET

We want to take a moment to welcome a new and very interesting net to the Amateur Radio Newsline family. It is on the AD6XK repeater here in Los Angeles California on 145.440 MHz.

What makes this net very special is that its Control Operator Simon Rosconi, K6DXN, is visually impaired. According to Dave Estrada, KD6HDX, Rosconi lost his vision at age 6. Estrada says that even without sight, Rosconi works 40 hours a week, and still finds time to volunteer his time as control operator for the nets.

But Rosconi is not the only vision impaired ham involved. Estrada tells Amateur Radio Newsline that Brian Coponiti, KG6BVO, who is also partially blind, has also volunteered. Coponiti downloads and plays back Amateur Radio Newsline to the net.

Estrada adds that this particular repeater group also has two other operators that are visually impaired. They are Gary La Duke, WB6WJW and Ivan Simer, K6TTA. (KD6HDX)

**

NAMES IN THE NEWS: EDWARD T. CLEGG, W8LOY FAMILY CELEBRATION

A few weeks ago we told you about plans by the family of the late Edward T. Clegg, W8LOY, to celebrate the life of this ham radio pioneer. The gathering is being planned by Ed’s widow Martie, her daughter Linda and Linda’s husband Rob Mc Guffie, K2HZN. Recently, RAIN producer Hap Holly, KC9RP, had a chance to speak with Rob about the upcoming event:

--
NO TEXT AVAILABLE – AUDIO ONLY
--

Hap conducted an extensive interview with Rob Mc Guffie. It really tells the whole story of Ed Clegg and his famed Clegg Labs. Part 1 is online right now at www.rainreport.com or by telephone at 847-827-7246. (RAIN)

**

RADIO REGULATIONS: AVOIDING A PHONE NUMBER CRUNCH

The nation's supply of telephone phone numbers is depleting rapidly and the government is taking steps to make sure what is left lasts longer. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more:

--
Over the past several years, area codes have multiplied to cope with the

explosion in technology. Regions have responded by splitting up area codes among geographic areas or laying another area code over an existing one.

But in 1996 the Federal Communications Commission banned such overlays dedicated to specific kinds of technology. The Commission enacted the ban because it considered separate area codes for cellular telephones phones and pagers unfair to wireless companies and their customers. This is because everyone would have to dial 10 digits instead of seven to reach wireless customers.

But states including California, Massachusetts and Ohio had been been asking for ways to prevent existing area codes from running out of phone numbers, the agency said. The FCC says that it will now hear proposals from states on how they intend to conserve area codes on a case-by-case basis, including plans to use technology-specific area codes.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in West Orange New Jersey.

--

The FCC, which is responsible for overseeing the supply of phone numbers, says that without action the number pool will run out in less than ten years. (FCC)

**

HAM RADIO BUSINESS: A NEW HOME FOR VERTEX STANDARD/YAESU

Vertex Standard USA, better known in ham radio circles as Yaesu, is moving to a huge, beautiful new facility. The new address is Vertex Standard U-S-A, 10900 Walker Street, Cypress, California, 90630. The new main phone number is area code 714-827-7600. All e-mail addresses will remain the same but telephone extensions will change. Vertex Standard makes the move -- no joke -- on Monday, April 1st. (Vertex-Standard)

**

INTERNATIONAL-CANADA: VE7BFK IS NEW RAC ARDF COORDINATOR

Radio Amateurs of Canada has named Gordon Young, VE7BFK as it's news R-A-C National Amateur Radio Direction Finding Coordinator. Young replaces Perry Creighton, VA7PC who held that appointment for the past several years. (RAC)

**

CONTESTS: SOUTH WEST OKLAHOMA SPRINTS

The first ever South West Oklahoma Spring Sprints sponsored by the Lawton VHF Contesting Club will take place in just a few weeks. Sprints are short period contests held primarily on a specific band or using a specific mode. The South West Oklahoma Spring Sprints are band exclusive. The 2 meter sprint is on April 1st from 7 pm to 11 p.m. Central U-S time. The 70 centimeter sprint is April 13th also from 7 to 11 Central. Both are open to all Oklahoma hams living south of Interstate highway 40 and West of Interstate 35. For more

information e-mail ne0p@arrl.net (VHF Reflector)

**

DX

In DX, K8PT and K3PLV are in the Channel Islands and operating as MJ slash K8PT and MJ slash K3PLV from Jersey through the 19th of March. The emphasis is on CW and RTTY in the WARC bands during daylight and 30, 40 and 80 meters during the evenings. Q-S-L as directed on the air. (RSGB)

Also word that Laurence Howell, GM4DMA, who is now resident in Anchorage, Alaska, will be travelling to warmer climates. This, as part of his work for the youth development charity Raleigh International. Howell say that he plans to be active as V51 slash G4DMA from Namibia from the 16th of March for two weeks. Look for him on 160 through 6 meters as his work schedule allows. (RSGB)

**
THAT FINAL ITEM: A WEDDING AT HAMVENTION 2002

And finally this week, get ready for a first. The first ever wedding to be held at the Dayton Hamvention.

No, we are not kidding. For the first time in Hamvention history, wedding vows will be exchanged at the show. This as Cyndi Krieger and Mark Elliot, N8WZW, will be married Saturday, May 18th at the HARA Arena during Hamvention 2002.

Mark and Cyndi met about thirteen years ago through a mutual friend. On their first date Mark and Cyndi went out for dinner and a movie. According to Hamvention sources, they have been an "item" ever since.

Mark introduced Cyndi to amateur radio by going to a hamfest. Cyndi had no idea what a hamfest was, but it sounded interesting. It was and she was hooked! Cyndi is now studying for her license and may test for it before Hamvention weekend.

Why get married at Hamvention? Mark and Cyndi couldn't think of a better place to share their love for each other and for amateur radio than by getting married at the world's largest amateur radio trade show. The ceremony takes place at 3 PM in Forum Room 3 immediately following the Amateur Radio Newsline produced Ham Radio Town Meeting. (Hamvention (r))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the Dayton Hamvention, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,

Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

The Pro-93 better than the Pro-92? I'd like to disagree with that.
FWIW, the 93 is on sale until 3/31 for $169.99.

I believe he put in the usual disclaimer "Only taken out of the box to
test it", so you can't complain when you get an opened box with a used
radio.

Anyone know an online source for the ERW-4C cable used by the Alinco DJ-X3?
Thanks,
Wayne

987. Cobra MicroTalk powerpack voltage ??

Newsgroup: rec.radio.scanner
Date: 2002-03-21 20:56:08 UTC
From: Frank <fbrody@snet.net>
Message-ID: <INrm8.8511$XP6.2164341887@newssvr10.news.prodigy.com>
Source record: 50405

Does anyone know what the specs are for the AC powerpack to recharge the Cobra PR900 GMRS/FRS radio with NiMH batteries ?

Great pocket size radio with 15 channels (1-7 shared with FRS), 2W output, pretty clear audio, CTCSS on all channels, Vox without a headset, auto-squelch, and busy-channel-lockout. It even has additional GMRS frequencies that the Motorola Dx and other 10 channel GMRS units do not have. The two pack (two radios!) was only US$90, but at that price does not come with the batteries or charger powerpack. If only the antenna would fold down !!

I already have a box of AC power packs and would hate to have to add yet another power strip if one of my existing powerpacks would do the job. No matter how often I 'neat-it-up', the area behind my radio bench always looks like a rats nest. My wife thinks I'm going to dim the lights in the entire neighborhood.

Specs needed are:

Output Voltage (like maybe 12V DC ?)
Output current (like maybe 200ma ?)
plug (like maybe 6MM coaxial ??)
Tip positive or negative ?? (I would guess tip positive)

Cobra does not supply any of this info on their site (of course -- they're trying to sell accessories)

I'd really appreciate if someone would read the info off their powerpack & post a reply for all.

Thanks a megabyte ...

Frank

No Gary, you will need coverage between 225 and 400 mhz. I also believe
mil-air transmissions are mostly in the am mode.

I can only think of two BASES offhand that cover both trunking and the
225 - 400 band: the PRO-2052 & the Bearcat BC780XLT. There may
be others but I don't think there are any handhelds that do it.

I bought one in the last 2 months from Ebay for only $115. It is in mint condition but the antenna was broken and the rechargeable battery holder and the manual were missing. I am very happy with it. You need to identify the model, there are 3 different versions. Mine is the oldest version, and is 1.0.

Sure, the 92 is better for LTR and P/L tones. But also remember with the 92 you must enter every single control channel AND voice frequency.

I have both, and my 92 receives as well as my 93, although I know most
disagree. The 93 doesn't have CTCSS, which automatically makes it a
lesser radio IMO. The only things I like better about the 93 is it's
freq coverage, the control channel only trunking, and it's speed.

Yup, you're right. The control channel only is nice. But IMO, the
CTCSS alone makes the 92 better. If you don't use PL tones than 93
might be a better choice. I have 3 towns around me that use the same
155.490 frequency and a couple that use 155.730. Without CTCSS, I
would never be able to tell them apart.

I myself have not come across the need for the CTCSS itself so that is not a factor.It would be nice if it did though, I agree.

I had the Pro-92 before and quickly sold it. I did not like the sensitivity for my location at all. The Pro-93 had outperformed the 92 in sensitivity from my same location so much it seemed that the 92 was not even on for even mild distance transmissions.

Demodulating the APCO-25 9600bps control channel is easy enough. The key is figuring out the encoding used. My demodulator *SEEMS* to be doing well, but without any info on the encoding used I have no hope of making any real use of it.

This is only for the control channel. The data channels use a different modulator and encoding.

They are typically not encrypted, but in addition to writing a demodulator and decoder, you'll need to write or get a vocoder. That's the hard part.

Uniden will probably license the vocoder for their upcoming APCO-25 scanner from the company that makes it.

We can probably come up with a reasonable approximate for the vocoder through trial and error.

Uniden really ticked me off so I'm trying to do as much of this development as possible and then give away everything I do for free. Ideally, if I can get a $500 WinRadio to do APCO-25 (astro) scanning, then that should really put a dent in any scanner Uniden builds for $400-$500.

If anyone has any technical info on the APCO-25 control channel encoding or data/traffic channel, I would really appreciate taking a look at it.

Redshift did you a favor by returning the check. Their software is awful.
Pro-Turbo is the one to get. Start here:
http://www3.sympatico.ca/len.c/index-main.html

My WinRadio (the 1000e I think -- can't remember exactly, but it was the current one at Hamvention last year) has a discriminator output that works in the narrow FM mode. There's no direct IF tap.

A good place to start might be to look
at web information on e911 and how
different systems get their location data:

http://www.911dispatch.com/911_file/location_tech.html

If you have legitimate need for the information,
just ask the cellular provider - a basic CS Rep
could look up the city/whether there were roaming
charges/etc. for their calls. More advanced
personnel could probably tell you the cell tower
location that a call was sent through. You'll
(hopefully) need a court order to violate the company's
privacy policy.

1010. Re: IC-R8500 10.7 MHz IF output: useable for panorama adaptor?

Newsgroup: rec.radio.scanner
Date: 2002-03-22 17:57:31 UTC
From: Bob_Parnass_AJ9S <parnass@megsinet.net>
Message-ID: <3c9b7064$0$1426$272ea4a1@news.execpc.com>
Source record: 50426

I had the same problem when using a modified Kenwood
SM-220 panadaptor with ICOM receivers -- not enough
signal to produce good vertical deflection.

I solved the problem by inserting an Ameco FET shortwave preamp
between the radio's 10.7 MHz IF output and the panadaptor's vertical
input (coupled through a DC blocking capacitor).

Make sure you tune the preamp to 10.7 MHz.

What does the Pro-92 have that the Pro-93 doesn't? I see that both the 93 and the 2053 are on sale for almost the same price now. The 2053's $10 more, but it's worth it.

A regular visitor to rec.radio.scanner named Eric G regularly (read: constantly) craps up dog-related newsgroups with posts about how all dogs are evil and are killers etc... Now, I don't know what happened in his life to cause him to be such a rant-and-raver but since his posts are public domain I wondered what would happen if someone responded over here. Don't worry, I won't spam this NG up since only fools engage in that behavior. I was just curious as to what people here thought about the endless barrage of posts Eric G inflicts on other NGs and whether or not he has good newsgroup etiquette.

(By the way, Eric, it's spelled "homicide" and not "homocide."

I was thinking of doing more-or-less the same thing. At home
somewhere, lost in the move, is a Ten-Tec T-Kit broadband preamp,
essentially one MMIC with support parts, which would be perfect
for the job. But I am hoping there is a coarse setting internal
to the Telefunken panadapter.

Either you're confusing text tags with CTCSS/DCS, or you don't have a
clue what you're talking about. What does the display have to do when
three agencies are talking over each at once, because the receiver
doesn't have CTCSS?

John. YOU are talking about APCO25 TRUNKING here, and the rest of the
thread is talking about the actual APCO25 digital voice mode.
Its quite simple. If you want to listen to normal unencrypted APCO25
now, buy a Motorola ASTRO brand radio, or wait till Uniden bring out
the APCO25 scanners and the decoder card.
If you want to listen to APCO25 ENCRPTED... dream on

Dave

No. I know who's talking without any display, period! Trunked systems don't use CTCSS. My point was that advanced hobbyist know who's talking without any CTCSS display or any other kind. I don't need to see a display in trunk or conventinal mode to know who's talking. I have a trained ear.

As for the agencies talking over others, all you said that is that you need it (CTCSS) to know who's talking. Thus my reply.

I know the sound of a Motorola trunked system as I have listened to one for about 8 years. New around here is a 400 Mhz trunked systyem. I have found what I believe are 2 trunked control frequencies for at least one of the trunked systems. Would an EDACS 400 Mhz system's control channel have a much more rapid 'pulse' and have a higher pitch/sound?

You still don't get it. You don't use CTCSS to SEE who's talking. You use it to listen to the agency on the frequency that you want to listen to. I have 3 towns all talking at the same time on one frequency. With PL tones, I only hear the one I want.

Dunno about the 1st 2 - PL tones - something I have no use for (and who really uses DCS? a few agencies in the whole country?), 500 channels?! I can barely fill half of the ones in the 2053 I have. What's LTR trunking? Does anyone use it?

Yesterday I turned on my scanner and all of the 1010
memories have been deleted. Including the search memories.

There was no prior warning at all.

I cannot load any memory location at all.

But reception is ok on direct freq. entry

Question--- Is there a backup battery or a memory capacitor that
may have gone faulty.

What can I look at as a possible cause of this fault.

1 week before the Easter break----Jeez

Can any one recommend a repair shop for this model.

I think the other fellow misinterpreted what you wrote
but inadvertantly hit upon another use for CTCSS/DCS
decoding.

If you had 3 different agencies sharing the same
frequency but using different CTCSS or DCS codes,
you could program that same frequency into 3 different
memory channels. In each channel, program a different
CTCSS/DCS code and alpha label corresponding to
each of the users.

Then, you *could* see who was talking.

Well I live in a small skiing town, and I heard on the scanner that this local guy named Ed got caught up in an avalanche. I listened as the search and rescuers went up there to save his life. How dramatic! Thank god he had his avalanche beacon turned on because rescuers were able to find him. That beacon broadcasts for two miles! Unfortunately he was dead. I went to the funeral because he was a friend of mine, and when no one was looking I slipped a brand new avalanche beacon into his casket. Now when skiers drive out of town they go past the graveyard, and many slow down because they pick up the signal. They think it is the ghost of Ed and it is spooky.

Sorry, I didn't mean to confuse things by bringing up trunking while you guys are talking PTT.

> If you want to listen to APCO25 ENCRPTED... dream on
>
>
> Dave

If we've learned anything over the past few years, it is that encryption is an often mis-used term.

Yes, if an APCO25 system is encrypted properly, then it will be very difficult for us to break. However, what usually happens is systems will have one or more flaws:

1) Pick a crappy algorithm that doesn't require brute force to attack (DVD -- decss http://www-2.cs.cmu.edu/~dst/DeCSS/)
2) Do a horrible job of key management making it easy to figure out keys (802.11b http://www.wardriving.com/)
3) Don't really do encryption at all, but claim that since it's digital it's automatically encrypted (Panasonic 900MHz and 2.4GHz phones)

So don't throw in the towel until people like me (and there are lots of us) have spent time studying the signals to figure out techniques to break them.

In addition to enjoying a good technical challenge, I'm also motivated by my distaste for Uniden. One of their managers really jerked me around so I'm interested in doing everything I can to put out free software that does everything their new APCO-25 scanner will do. For ~$500 (slightly more than the current Bearcat) you can get a WiNRADiO receiver. I plan to do my implementation on WiNRADiO and encourage others to buy WiNRADiO and use my free software instead of buying Uniden scanners. Or, if you can get a wide enough IF out of your current scanner, you can use my software and your sound card to hear APCO-25 traffic. No new hardware needed.

It's important for patriotic people like me to attack these systems because our public servants rely on them to protect us. If the system is easily compromised by me, then it's certainly easy for terrorists to compromise it too. A false sense of security is a lot worse than no security at all.

The 1000 channel memory in the MVT-9000 is non-volatile, meaning you should not be having this problem. The people at Bandercom are very experienced with the Yupiteru scanners...not just from a sales point of view, but from in-depth technical experience! Click below for contact information. Please keep us (me) informed. I have one of theses also. Good luck!

1046. Watkins Johnson .. D.F. rack closes tonignt on ebay ...

Newsgroup: rec.radio.scanner
Date: 2002-03-23 16:27:24 UTC
From: onone <nobody@nowhere.net>
Message-ID: <g27p9uk7ega4b3vivfpsgato6ns1mlt72o@4ax.com>
Source record: 50361
Cross-posted to: alt.radio.scanner,rec.radio.scanner

For all you scanner hobbyists that use (the best) Watkins Johnson Government scanning / eavesdropping receivers a rare moment is at hand.

A " highly desirable " MODEL 6 direction finding rack accessory , for your WJ / CEI receiving rack has come available. Although ALL models are desirable ..this is one of the most recent they made and has those two rows of illuminated control push buttons.

Hardly any of the " coveted " accessories (the speaker rack, the digital multi -readout panel etc .) adds pure eavesdropping / monitoring pleasure more than finding new and unusual signals (many of which , only scanning / monitoring equipment like WJ / CEI can hear < radio shack and bearcat etc. doesn't even dream of it > and looking away from your panadaptor tuning display to see the actual direction the new / found signal is being transmitted from. (is it from the antenna farm up on Bear mountain, from downtown , perhaps moving around ...??)

When locating any new signal to try to develop information like where it is coming from , who is transmitting it , what type of signal is it , (all to try to learn how to hear or decode it) ... this beautiful receiving accessory is indispensable. If you have one and two other friends that have them too ...it's VERY easy to nearly " pin point " the location of ANY SIGNAL , almost instantly. This makes GPS / FCC database and / or physical inspection of transmitting locations a breeze. Wanna know where that swat team action is located ..? , wonder where that new hopping spread spectrum transmitter is located (to see whom is using it ..?) ..? , this equipment makes it quick and easy.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1340008352

here are some other " nice " Watkins Johnson receiving accessories currently available on ebay too.

need bandwidths to allow sharp weather sat picture copy or hear (finally) those spread spectrum signals other narrowband radios (like ALL home scanners) cannot hear ...

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1715301560

yep ..another one ...a WJ speaker ... but grab your wallet ..these are selling briskly at over $130 to nearly $300 ea. just for a speaker ..

available
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1341206065

just sold and 29 bids too .. it was a war ..
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1337273107

and this is nice too .but remember it ISN'T a receiver ..it's just a tuner ..and has less front end sensitivity than the WJ receivers of the same frequency range

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1715293493

noone important

fYI:
if you are reading this and don't know about the " commercial " government and military surveillance / monitoring / scanning receivers like Watkins Johnson , CEI , Racal and many more ... then there are a LOT of scanning eavesdropping signals that YOU are completely missing , not able to find or hear with " consumer " level equipment. (like Bearcat , Radio Shack, AOR ... ALL home scanners) Plus the ability of this equipment to find and hear signals on ALL frequencies and at immense distances (under ANY urban conditions) is unparalleled. Once again , signals lost , masked or plain not heard in home style equipment are found easily ..strong and clear ..with this style of equipment.
Affordable equipment from the mid '70 (better BY FAR than any home equipment) .. can be had reasonably. This would be (say) two rack receivers < total tuning range from 20mhz to 1.2gigs > .. one rack panadapter < used in PRO equipment for tuning instead of a dial like home equipment > , a speaker rack (optional) , and a control panel < antenna switch for Rx front ends and I.F. panadatper out switch to switch between the Rx i.f decks > ..would likely only cost around $600 to $800 depending upon quality and extras.
More modern style with similar frequency coverage ...and digital readout and control ... up to about $3000. More modern yet , with extended frequency coverage ... say up to about 40 gigs .. could cost over $10,000 used surplus. It's expensive (and highly popular) because of what it can do / hear. Tune (or scan) YOUR consumer scanner from (say) 800mhz to 1.2 ghz ... side by side with " any " of these ..and you will discover instantly why it is so expensive and highly sought after. The difference is literally shocking. (signals that you never knew existed, come pouring through, signals that you thought existed < after all , you hear them > don't really exist because they are just images in the consumer stuff , from other bands and frequencies . Types of signals like certain digital , frequency hopping and spread spectrum types ... nearly totally invisible to home scanners .. are easily found / seen .. loud and clear ..in this type of equipment. The difference IS profound. < and YES .. expensive too .. unfortunately >)

>frequency. With PL tones, I only hear the one I want.

I deleted the post with your quote in it. You said you needed CTCSS to
know who was talking because others use the same freq... I then said
that an advanced hobbyist usually knows which agency it is by ear.
I know what CTCSS is. I have around a half-dozen radios with it.

You did not say that you only wanted to hear only one. You something
like I need to see or know who's talking. Since I delete the messages
after I read them, I can't paste what you said.

>> You still don't get it. You don't use CTCSS to SEE who's talking.

You might if you are searching for new users / agencies. Seeing both the frequency and tone would immediately tell me if the transmission was someone I had already I-D'd.

>> With PL tones, I only hear the one I want.

When two agencies are talking simultaneously, though, you'll only hear your chosen agency if it has the stronger signal.

>> Most advanced hobbyist would know what channel and service it was without looking at the display.

Depends on how many agencies and channels you monitor. If you're monitoring just your local agencies, possibly.

I would be hard-pressed to recognize the "sound" of every agency I monitor at home, particularly when several receivers are scanning simultaneously with file sizes as large as 600 channels (freq and tone).

I was just wondering if one or the others cable will work with BOTH units.
The R-2 uses a stereo plug and the 2053 uses a mono plug. Has anyone tried
this?

R.F. Gain is just having a attitude problem. If you look at all his post he freaks out on others. sorta makes me weary to buy that radio from him. You might get shot or something if you fart wrong.

hmm. now if anyone had the new audio 900Mhz ones that be fun to know too. I have a few neighbors that bought them. Cant get close enough with a couter to see. Maybe I will just buy a 900 one and post the freqs for others.

I was surprised when I went down to washington state. People say the fast food restaurants headsets that are grey in color are around the 400 - 500 mhz area. I never ever got anything there. So I decided to scan the 900Mhz area. Since I know our fast foods in BC canada are 902.300 almost everywhere. They look like the old 33.16/154.515 sets. Anyways without babbling. I found burger king is on 904.?? I forget the rest. The headset is always keyed up. but not to the com outside. Sorta like a wireless mics those new headsets are. But. I see they are going up in frequency more and more.

Chill out, guys, Emilio is a writer of poor fiction. I hesitate to even call him a troll, his stories are so-o-o bogus. Although his name used to be Emilio Goldstein (with a "D"), so this may be a copycat. (The email "address" matches, though.) When last heard from, he was living in a large city (New York?) and got beat up by a dept. store security guard when the audio on his scanner tipped of a shoplifter. His stuff used to be fairly entertaining, but they've gotten pretty lame lately.

Here's something I don't get. We all have scanners. What do you do with a scanner? Why don't you sit, like I have, and find them yourself? I have a lot of cordless phone frequencies. Because I found them myself. And they are mine. I don't work for you.

I hate lazy people who post here first before doing their own homework, like reading their own manual and finding the most basic frequencies. Get a clue. I actually know of a GOVERNMENT website that has all that info your looking for. Their called the FCC. I've gotten a lot from there. Now quit bothering us with dumb questions and do your own work for a change.

You'll probably hear a lot more secrets on those frequencies than you will on cell phone frequencies. People leave them on 24/7 and forget they are there. They note that the little receiver that comes with barely covers their house and have no idea a good scanner can hear them 1/4 mile away or more. I've heard them, still plugged in & running when the "baby" was 6 years old....

Wow, kind of harsh. Have a bad day Rob? Karen, he is right. The best way to find the frequency is to do a search. Try from 902mhz to 908mhz, and 925mhz to 929mhz. Keep in mind that there are many Uniden 900mhz spread spectrum phones that you will not be able to hear. I use one of these and you can pick it up at 918mhz, but its just a tone. Good luck.

9000xlt for sale (relisted). Like new in the box. Perfect condition in every way. No scratches and shows no sign of use whatsoever. Functionally flawless. 25-1300 minus cell but there are cell images. 500 channels in a very handy 20 banks. Alpha naming, count, and very fast. Excellent sensitivity. Price is $215 and I will pay UPS shipping in the lower 48. Here is a pic.
http://mediaservice.photoisland.com/auction/Mar/2002321741552053547O507.jpg
It is an actual pic from my Photo Island account. Once again this item is as good as new. Please email me at bruceinomaha@yahoo.com if interested in purchasing.

The market will probably flood with good scanners once digital comes
out. Shouldn't be long before other manufacturers have digital boards
too. I'm wondering if AOR will be able to make a digital card for the
AR-8200, or if they'll just design a new scanner.

Was browsing through an issue of Popcomm at the bookstore and seen an ad for portable antenna masts. I happen to be very interested in one so I went to their website (www.antennamast.com). I liked what I seen however when I clicked on the US distributor the link was dead. Then I email the people at antennamast.com however that email bounced.

I can't believe they pay the money to run an ad in Popcomm but don't exist. Anyone have any info on these people?

I had one, a very spendy device that works well but unless you really need a portable device not really worth the money.
I have since gone to a Lowe Airmaster 2000, using it with Airnav on a small laptop. This setup works great and is much less in cost than the AOR.

Hi
Ive got two MT1000 Low band portables H41GCU7160AN
42-50Mhz 6 channel
Package includes 2 radios with belt clips, antennas
(one needs replacing)and two pocket chargers (no batteries)
Radios look and work fine
$400 + Shipping
Thanks
Fowler

Okay many thanks to everyone....the emails are coming in thick and fast.
Suggestions/Requests have also been coming in and I've already made some
changes and have more to follow.

Mods Done:
* Include Compass Heading for Beams.
* Include URL-Holder for stations that have them.
* Include TX Field

Any more?

Tom http://www.tom.mcq.btinternet.co.uk/ar3000/mcqlog.htm

1083. FM broadcast station on VHF!

Newsgroup: rec.radio.scanner
Date: 2002-03-24 16:42:02 UTC
From: "Matt J. McCullar" <mccullar@flash.net>
Message-ID: <ulnn8.12041$Hj.2153926689@newssvr16.news.prodigy.com>
Source record: 50299

I pulled a Standard VHF/UHF HT transceiver out of mothballs a couple of nights ago so I could get back onto the ham bands. It's also a great scanner because it's got more capabilities than my old Bearcat 220 scanner (though it can't cover many of the same bands).

Anyway, while just skimming through the frequencies, I picked up music on 161.76 MHz. A little distorted, but very enjoyable. Very OLD music, too. After listening for a while I found out that it's a commercial FM radio station, 89.5 MHz, coming out of Weatherford, TX (about 40 miles west of where I live). Funny thing is, I cannot pick up that station on my FM receiver in the den! And I can't get this signal on 161.76 on my Bearcat, either. I'm guessing that this is an intermod effect, inherent to my Standard HT.

I'm no expert on how this works. Any ideas?

161.76 is used for news gathering purposes, between the station and
news crews. I would think that perhaps it would have something to do
with this, but it was distorted, which means it was probably an image of
a wide FM transmission; this frequency is used in narrow FM, and
the fact that you didn't catch it on another radio seems to back that up.
The IF is probably different on the two radios, so an image on one would
not necessarily show up on the other.

I've seen the frequency of 171.805 referenced as one used - it may have been specifically for the NYPD or some other dept, though. I imagine they have a range of frequencies around what's been given here that could be used. Do a search for "wireless mic frequencies" or similar, as I have seen lists on the net of generic frequencies for wireless microphone use in the upper VHF HI area.

Recheck that Burr. Its not the antennamast.com site that was failing,
it was the link to their US distributor linke
(http://www.seacove.net/worldmarketing/) that was failing.

Never mind however as I just received an email from antennamast.com,
NEARLY $600 for a 28' mast! WOW I don't think so! 30' mast at
HomeDepot is $44.00......

1088. Re: Pro 2050 question re. trunking in Calgary, Alberta

Newsgroup: rec.radio.scanner
Date: 2002-03-24 18:12:37 UTC
From: Den6N <djmr26@bestweb.net>
Message-ID: <u9s5oo54ti2b99@corp.supernews.com>
Source record: 50304
Cross-posted to: rec.radio.scanner,alt.radio.scanner

It sounded at first that you weren't getting the data channel well enough to 'trunk', but the fact that you intermittently get the dashes in place of the frequencies in the display indicates that you are. When the frequencies show in the display and it's in trunk mode, that indicates that you're NOT getting the data signal and trunking, but once the frequencies disappear and are replaced by the dashes, this indicates that you ARE getting the data channel and have started trunking.

I'm not sure what exactly your problem is, but it may have to do with having to program the fleetmap in, or correcting an erroneous fleetmap entry. I trunk
with a PRO-91 handheld - it may be set up a little differently than the 2050, I
don't know. I've seen trunking websites that include not only the frequencies,
but also the fleetmap that has been determined by trial and error by someone.
Could your trunksystem be a hybrid, and you're set up to trunk only a type1 system? Or possibly you're on the fringe of the system's reach, and just not
getting it solidly enough to hold on to it for any length of time? I work for
NYC Transit, and I can hear them great at work on my -91, but I live 40 miles from there, and I can't get anything of the system where I live, with a
PRO-2052 and a roof antenna, because the 800 band just doesn't travel like the lower frequencies. I've heard of some folks getting trunksystems from quite a distance, but I believe you'd have to have a yagi for that band pretty high up to catch it.

The only thing you will get at this time is random active talkgroups by 'search', as the 'scan' function will only do something after you've pro-grammed specific talkgroups into the slots allocated for the 'scan' mode. This is similar to the way you'd program specific frequencies into channels in conventional scanning, so that you only hear the talkgroups you're looking to monitor and not other things you wouldn't want to hear. You can then jump between the two modes as you would jump between scan & search in conventional mode.

1089. Re: FM broadcast station on VHF!

Newsgroup: rec.radio.scanner
Date: 2002-03-24 18:33:00 UTC
From: John Mullaney <johnster@attbi.com>
Message-ID: <wZon8.38472$44.12938311@typhoon.ne.ipsvc.net>
Source record: 50272

161.67 is one of several channels used for auxiliary broadcasts for Part 74 users. This can be Remote Radio Broadcasts, Cueing or IFB use, Two-way radio for TV, Radio Stations, Network Entities or Large Cable Systems (for above uses). From what you where hearing my first guess would be a return link or IFB feed but it could possibly the actual broadcast link. RPU transmitters on that Freq will only pass about 50HZ-7 1/2KHZ so typically they are only used for voice remotes but as you get to smaller markets you will hear them doing more over them. In total emergencies they have even been used as back up Studio-Transmitter links.
It varies by where you are in the country but in most places the others VHF ones are:
161.64, 67, 70, 73, 76, There are also some shared ones in the 153. area plus 166.250 and 170.150
On UHF 450.05-455.95 and 455.05-455.95 with telemetry channels on both ends. Local coordination has a lot to do with how the channels are used and now bandwidth is almost completely dependent on what's going on in your area. However many older cities stick to the earlier designated 25, 50, and 100KHz channels just because of coordination with older systems that are already in place.
Here in Boston through coordination 161.64-76 166.25 are used just by radio for remote broadcasts. 450.05-65 and 455.05-65 is used for two-way/traffic with 450.65-95 and 455.65-95 used for remotes.

Well that's probably way more than you wanted to know so I'll stop there. Check put Part74 for more details.

Well, 161.76 is a broadcast aux freq, one that could be used by the FM station in remote pick-up mode, but that doesn't explain why you couldn't pick it up on the BC220. 'course the 220 could be a poor performer! I don't think it's an image freq because you would also pick up some local FM stations in the same range.

How long have you been installing the Lear systems? How do they hold
up so far? We are looking at them to install in our 2002 Crown Vics.
We are down to either the Mobile Vision piggy backing on a state
contract or bidding the Lear. We are testing a Lear right now and are
leaning very strongly toward it.

George,

I'm sure AntennaWarehouse will sell you a 10 foot section of mast and
say it will reach 30 feet.

In article <3C9E1412.3080007@licensed4fun.com>,
av8tor@licensed4fun.com says...
> Recheck that Burr. Its not the antennamast.com site that was failing,
> it was the link to their US distributor linke
> (http://www.seacove.net/worldmarketing/) that was failing.
>
> Never mind however as I just received an email from antennamast.com,
> NEARLY $600 for a 28' mast! WOW I don't think so! 30' mast at
> HomeDepot is $44.00......

>
I'm a Chief Engineer at a group of stations in the Northeast and on
some occassions we've used our BA Broadcasts Auxilary frequencies as
an STL Studio Transmitter Link when or regular STL or phone lines were
out of order. 161.76 is a BA freq and it sounds like they are using
it for a situation like this. There are a couple of places you'll
find Broadcast Aux transmissions. Try searching 25.870 to (I'm doing
this from memory so I might be off a little, its been a while) to
26.400 in NFM. TV stations use this as IFB (talk to on the scene
reporters) in many markets or they use it in WFM to send audio to a
source. Search 450mhz to 451 and 455-456mhz in nfm for the same
thing. Lot of remotes, station to jock/reporter, traffic reports and
on the scene stuff here. If you have the ability, 948-955 WFM has a
lot of broadcast STL's but you've got to be in the path of the signal
to hear it. Again, I may be off by a freq or two, its been years
since I've looked at this stuff, but its there if you want to listen
to it. I like to listen to the Metro/Shadow traffic reports from the
Helicopters here. Actually I like to listen to what the reporters are
ssaying off the air, it far more entertaining.

By the way, we threw our Bearcat scanners out the window years ago.
Horrible performance. My news departments raised hell about all the
stuff they were missing. Maybe they've improved now, but you couldn't
prove it by me.

Good luck.

I spend as much time scanning business comms as
public safety.

LTR trunking is used here (in IL) and is growing
more popular among businesses on the 450 - 490 MHz band. Many of the local
businesses in my community use a 900 MHz LTR repeater.

The police in the town closest to me use DCS and DCS is quite
popular with business communications.

Hi all,

Since replacing the El display in my 2005, I've noticed the display flickers an awful lot. This was the first (and only) display swap I've done. I'm thinking one (or both) of the EL leads may not have a good contact to the board.

Has anyone else seen this in these displays? Am I on the right track? Thought I'd ask before I pull it apart again.

thanks!

A Pro 93 and Icom R2 seem to work with each others cables most of the
time with appropriate adapters.

one or two pieces of software has given me weird grief (I cant
remember which at the moment but the ones I have ended up using
'win93' and rt systems 'icom r2 cloning software' seem to work ok a
majority of the time). I suspect most of the current issue sI have
are windows related because they only fail to work on each others
cables when I have used my serial port to talk to 1) kodak dc215
digital camera 2)an old serial photo port scanner or 3)an old mp3
player...

Judging by the prices of parts below, the awful graphics on the front
page of the site, the overall amateur feel of the site in general, and
the misspellings on the site, I don't think I'll waste much time browsing
there.

I have found with both the r2 and the 2053, that's it's MUCH safer to
download from the radio, make your changes, then upload back to radio.
Just loading the data file then making changes and dumping to radio has not
been a pleasant experience ALL the time.

Source record: 50334

Probably a long shot but worth looking in to. I purchased a 2004 at an estate sale once and it had been in storage over 10 years. When I got it home it had no backlight activity at all. About 6 months later and many frustrated flips of the backlight switch it came alive like a new display. You might try some contact cleaner on the switch, it's a cheap effort.

Hey GeorgeF, you forgot:
http://www.licensed4fun.com/
http://home.flash.net/~av8tor/webeng/
http://www.topsecretbooks.com/

Pretty lame way to advertise GeorgeF, or should I call you G.W.Fetter...
You should go ahead and advertise your web services too, Fetter, since your
work is so great lol. Try spell check on your site next time before you
spam it. Scamming people to get them to go to your website is not a good
way to start a business Fetter, unless your scamming them with your product
also (wouldn't be surprised).

1127. Speech inversion descrambling

Newsgroup: rec.radio.scanner
Date: 2002-03-25 13:25:56 UTC
From: ctpds49@aol.com
Message-ID: <20020325082556.21809.00000006@mb-ch.aol.com>
Source record: 50341

Voice Frequency Inversion

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion

For whatever reason the 220/230XLT manual is not online however the
120XLT manual is and short of the extra coverage above 512MHz the two
are the same. Use that one, you should be OK.

$2900 for the scanner and $335 for shipping?
Maybe he got his exchange rates a bit messed up.....
Hell, for $335.00 I'll go pick it up (maybe it's a Japanese Scanner
Delivery)

If you're complaining about his tag line link to
http://www.MilAirComms.com/
I think you're off base. That site is related to the hobby, and
it seems to have a lot of free information.

If you think he's related to antennamast.com - I doubt it - he posted a
message later indicating he found their prices and thought they were
expensive.

Source record: 50256

I just recently introduced the idea in the Pro-93 yahoo group only to find out that it was discussed before there.
The end was that many PDAs have different voltages from the unit to the serial port. I think that if a program was generated for a basic unit, hopefully a Palm since I have one :), that users could make the small purchase for it only. Problem I am sure is that many peole have Casios, Handsprings, and I suspect that different Palms may have problems as the same. I have a unit that has a serial so I figured that if the PDA goes to serial voltages, that a program SHOULD be able to use that signal. I guess it more in depth than what I thought.

I recently got my M100 from ebay for $33.00 shipped especially for my Icom PCR-1000. I use the program
http://www.users.bigpond.com/geoffwicks/PCRPilot.htm to control it. I tried emailing the author but had no response. I wanted to further the program to use DSP. I also would like to have maybe a minor 'scan' which I would like it to switch the programmed channels say every 2 secs and maybe expand the number of programmed channels, only 26.

Well, the majority of towns around here in NJ are still operating in the 150mhz area. My county PD is using a standard 400mhz trunked system, but they dispatch a limited number of police departments. All EMS and fire is in the 150's or 450's. Amazingly my town's police just recently went to a digital system. Oh, and the NJSP use an 800mhz trunked system.

My Pro-2053 handles the local traffic no problem. Therefore, I think I'd find LTR or DCS useless around here.

I have no intention of crapping here (In fact, I stated that). I just
wanted to ask what people thought. Back in the day some people took NG
etiquette pretty seriously and I was curious what you guys thought of
one of your guys spamming up another NG. That's all.

Ok, that was kind of harsh, and I take it back. I usually give people the benefit of the doubt, but this one seemed like a lemon. The website is registered in the same area that GeorgeF's is. That doesn't necessarily "prove" that the site is his, but I find it very big coincidence that he is, in a way, advertising this site, and has his own similar websites located very close to this one. I also took his reply as a "yeah, its mine and here are my others" reply. So if I am wrong George, I apologize.

And international shipping rates are VERY high. I shipped a small AM table radio from here to Japan (I live in S. Korea, so Japan is only about 900 miles away) and it cost me nearly $30.. the package weighed a little over 2 Kg (around 5 lbs.)

Au Contraire!

I follow a large number of towns here in central NJ. The majority of the police agencies are VHF-Hi and UHF, with some fire agencies on VHF-Lo. Almost all of these agencies use some form of CTCSS, either PL or DPL.

Some of the VHF-Hi towns share a frequency with agencies in Penna., often with the hi-powered Pa State Police. Using PL eliminates the annoyance of hearing these Pa. based transmissions.

My home town shares a UHF frequency (500.xxxx) with some very busy commercial enterprise. Again, using PL eliminates the annoyance of hearing these transmissions.

Many of the VHF-Lo fire agencies share frequrncies with similar agencies in south NJ. Again, ...

All in all, using some form of CTCSS makes the scanning much more enjoyable.

One of 'our guys'? Every individual has responsibility for his own posts.
The best way to deal with a spammer is to ignore him and not reply. There is
no fun for the spammer then and he will leave eventually. But that takes
more self control than some people have.......

1154. Discriminator tap info

Having read the Bill Cheek piece on the discriminator tap, I intend to do the operation on my BC-760XLT, but have run into a problem. I bought the required 1.0mf tantalum cap, and the directions call for the + leg of the cap to be connected to the chip. Problem is, the cap I bought appears to be non-polarized!
What's the deal here? Did I buy the wrong cap? Read the directions wrong? Am I reading the cap wrong?
Canv anyone help? Thanks. Mike.

Mike on my BC780XLT I used a generic disc capacitor. Don't worry - just hook
it up and it will work fine either way. Enjoy!

I am looking for a good *indoor* antenna for my Pro-2053. Anything that would be better than the one included, without having to mount anything on my house. Any ideas? Thanks.

-John

And learn how to spell, too! It's: blue, thru, and McDonald's. Not to
mention other, miles, and hey.

And it's only fun if you have a two-way radio that can transmit on
those frequencies! But what can you expect from webtv?

Since I am only interested in local comms, I use the telescoping antenna that comes with the 2053, thus eliminating the need for PL tones... I know many towns use PL tones, but that's a feature that is not needed for my uses.

Hmm.. I use the included antenna and I could actually hear things I couldn't
with the mobile scanner antenna I have on my shed in the backyard, particuarly
the 800mhz trunked system in use by the NJSP.

Don't take it personal!

Remember this isn't face to face communication or your best friend giving advice. It's easy to hide behind a username and give everyone shit. Some folks live on a constant "high" doing this.

A few good souls kindly respond to questions and really contribute to the scanning hobby. Just simply ignore everyone else. You have just as much right to be here as anyone. Over time you'll learn who contributes and who needs to be placed in your kill file.

Also 161.75 is the wide FM audio for one of the cable TV channels. As there is always some leakage from cable TV, you should check if their audio is background audio for a cable TV channel if you have cable TV in your area. This could very well be what you heard. Other frequencies to check also include 143.75, 149.75, 167.75, 173.75, and others (note the 6 MHz spacing).

I use the rubber duck antenna that came with the '92. Those rubber ducks, as well as the telescoping ones like you use, work pretty well. The need for the use of PL/DPL exists even with the little itty bitty rubber ducks and telescopers.

From my location in the center of NJ, the Penna stations come booming in. And stations from south jersey come booming in. They all interfere with local stations, even using the itty bitty rubber duck.

Thus, the use of CTCSS is a big advantage in enjoying the hobby.

I really still don't understand a damn thing about the connection! First which

sites is crappy reffering too? The antennamast site? If so that site
is registered in Virgina. Most of my sites crappy refered to are
regitered in Lancaster, PA (Check your maps, not really close to
Virgina). Since the registration of most of my sites I have moved to
Daytona Beach FL (that is where MilAirComms.com is registered at).
Again, check you maps, that is even farther way from Virgina!

I did NOT mention ANY OF MY COMMERICAL SITES AND AGAIN I DID NOT IN THIS
POST! I do not understand what crappy's attack was all about! Some
people just have "hair trigger anti-spam guns" I guess.

I have NEVER advertised a commerical sites unless it was in my SIG file.
As per the charger of most NG's is legal! In the post in question
the only URLs in my post was the website in question (not mine) and my
Hobby site in my SIG file (non commerical).

George

I have posted some inquiries about this and appreciate posts/e-mails I have received.
I have another request. has anyone with a Pro-92/93 (or base equivalent) successfully programmed a UHF 400 Mhz trunked system (specifically an EDACS or Motorola). If so, could you please (in detail by steps) help me with programming a system in my area. I have located 2 data channels (possible for 2 different systems). I have located 5 voice channels/frequencies that I am certain I need to implement in programming the UHF system I am focusing on. Question: Is there a LGN 'logical order number' these frequencies need to be entered? How about the data channel? Does it need to entered as a 'base' frequency? I don't understand the 'frequency steps' process. Does that apply to an EDACS or Motorola?

Only if "excessive". A scanner in a house will receive well below the
"excessive" level.
I lived in 4 separate houses and could recieve the cable audio on a scanner
in all of them.

Another one to try is to drive around with one of those frequencies in a
scanner. You will fine places where again you can receive the audio.

Hi there,
I have a mint condtion Radio Shack Pro-2041 400 channel scanner for sale
Lots of features, manual and antenna included
Asking $139 plus shipping CONUS
Please reply to rusty@dccnet.com
Thanks-Russ

1183. Re: help with UHF trunnmked system

Newsgroup: rec.radio.scanner
Date: 2002-03-26 14:59:26 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3CA08CCB.E988548A@optonline.net>
Source record: 50198

In a NOT system, the frequency a message going to be being transmitted
no is transmitted on the Control Channel as a hex number, which we will
designate as "m".

The receiver then calculates the frequency to tune the receiver to from
the formula:

Frecv = Fbase + m * Fstep,

where Frecv is the frequency to which the receiver is to be tuned, Fbase
is a base frequency, and Fstep is the step frequency.

In an 800 MHz system, there is a single value for Fbase and Fstep, and
this information is programed into the receiver.

In a UHF system, any value can be used for Fbase, and Fstep can be
either 12.5, 25, or 50 kHz. Thus, for a UHF MOT trunked system, you
must program these data into the receiver, along with the actual channel
frequencies.

In most listings of UHF trunked systems, including those in Police Call,
Fbase and Fstep are given along with the actual channel frequencies. If
you only have a listing of the channel frequencies, then you must do the
math to fit the channel frequencies to the above formula and determine
Fbase and Fstep yourself.

The channel frequencies for a UHF MOT system, including the control
channels, can be programmed into the receiver in any order. The manuals
tell you how to enter Fbase and Fstep. If you are using Win92 or Win93
to program the scanner, there is a place on the bank page to enter these
frequencies.

Walt

You don't get it.
Listening to customers talk about burgers is not interesting. BUT listening
to
employees talk about the customers can be VERY interesting...especially if
the
customer is YOU! :-)

This is your idea of 'interesting'? Fun??? Wow...maybe I'll invite ya over
the next time I pick lint out of my belly button....

I use to live in Norfolk, NE. The leakage from their system
was so bad, that I use to be able to drive almost all over the
city and listen to MTV in my car (that's when they use to simulcast
over FM before MTS Stereo). Too bad they got so many complaints
and finally fixed the problem. It was great listen to MTV, The Movie
Channel, HBO, ect in the car!!!!

1195. NOTICE regarding free SWL LOG

Newsgroup: rec.radio.scanner
Date: 2002-03-26 23:12:10 UTC
From: MadDogMcQ <tom.mcq@btinternet.com>
Message-ID: <a7qv8a$43l$1@knossos.btinternet.com>
Source record: 50210

Hi All,
I should point out that the free SWL LOG which I recently advertised to any interested parties, needs the recipient to have a copy of Microsoft Access in order for it to work. I assumed that all those people who registered their interest on the website realised this, but maybe not all.

So for the sake of clarification, here's the System Requirements:
* Windows 98/ME/2K/XP
* Microsoft Access 2000
* 64Mb Ram

Owners of Access'97 may be able to run the database with some loss of features. Tests to be carried out shortly.

Regards, Tom McQ.

==========
ORIGINAL MESSAGE
Posted 24/3/02 Tom McQuiggan
==========
Hi All,
I've just written a database for myself and wonder if anyone else is interested in having a copy? I'm going to upload it shortly, but in the meantime you can find out more about it and tell me whether you are interested or not. Any constructive comments would be welcome.

The information page is pretty large, so loading won't be instant :-)

http://www.tom.mcq.btinternet.co.uk/ar3000/mcqlog.htm

Regards,

Tom McQ.

1203. Re: HELP 900Mhz pone codes loser who can't spell

Newsgroup: rec.radio.scanner
Date: 2002-03-27 03:53:00 UTC
From: Rob Taylor <fireboy001@hotmail.com>
Message-ID: <onbo8.115$1j5.204700@news.uswest.net>
Source record: 50218

Pretty much. I was scanning way before the internet. I figured stuff out on my own. I never knew anyone else with a scanner, just me. And I actually scanned the airwaves. I would enter a high and a low and let it go. I figured things out on my own by trial and error and reading my owners manual. Simple.

I wanted to find the frequencies for my cordless phone. So I turned the phone on and scanned. When I got it, I'd save the frequency and change the channel on the phone, and repeat the process over and over. In less than an hour I found what I wanted to find. People today have no ingenuity these days. Too quick to ask someone for the info they had to find out themselves, for the most part. I call it being lazy and riding on the backs of others.

That's one of the things I love most about scanning. Just letting it scan. Not my programmed stuff, but starting low and just going until it hits the top. It's fun to see what you can find. Then finding something new and trying to figure out what it is. Finding new stuff on your own is fun, and it's why I still scan, and actually enjoy it. Discovering new (new to me) stuff is fun. Figuring out who it is, is fun. Asking someone else for the data and just plugging it in and listening isn't fun. It's boring.

I've got the BCT 7, and been happy with it over the few years I've had it. However, it's uses are getting more limited as more cities get trunking. Most HP's haven't changed much, nor have the Air Patrols, so the alerts for them are still usefull-not 100%, but useful. I've found on the road that
being able to scan the CB channels to catch the trucker cross-talk is extremely helpful.

So, as to which is "better," that would depend on how much time and effort you want to put into it. You can add freqs. to the BCT7, but it's a pain, and the amount you can add is split into the different banks.

When I'm driving, I also use an AOR 8000 with all the city and county freqs

in it that I'm traveling through, along with a regular CB radio. My car looks
like an antenna farm.. <g>

She is looking for any 900MHz cordless phone frequencies, especially Uniden units. I gave her the link to Strong Signals website, but if you have any info at hand, I'm sure she'd appreciate it.

As for those who criticized her grammar and spelling (not you, Mike), this is not an English class, there are no "A"s being given out for correct syntax. As there are no perfect people on these NGs, how about lightening up! This is a hobby, it's supposed to be FUN!!

1209. FLEX paging protocol ?

Newsgroup: rec.radio.scanner
Date: 2002-03-27 06:49:01 UTC

Hi!

I'm looking for people who are familiar with the FLEX protocol
and can tell me something more about FLEX. Here in Holland
the dynamical group codes on our public safety FLEX network
are used a bit different than on commercial networks.

Also I'm looking for information on A/B/C/D FLEX and
4 level.

Bye, Peter Hunt.
Holland.

1210. Re: Opinions Of Uniden BC7T and Driving Cross-Country

A lot of "hard core" scannerheads, myself included, kinda shyed away
from
the BCT-7 since it's so time-consuming to put in a bunch of specific
frequencies... no number-pad. Not nearly as flexible as the main-line
radios.

But I got one at a good price, and found it terrific for
travel. It's beginning to get a bit "dated," with all the new 800-MHz
frequencies, but I found that the state-by-state preprogrammed police,
Highway Patrol & highway department "banks" are actually quite
accurate...even today. It also has "banks for, Fire/EMS, CB (I think),
News Media,
and a 25-channel "do-it-yourself" bank.

That, plus each of the service banks (police, Fire...) has from 10 to 25
empty channels where you can stash more stuff you want.

On the highway, I've found that you seldom have more than a few minutes
to listen to local PDs along the way... mainly State Police/Highway
Patrol...

I usually use the BCT7, but keep a more main-line handheld (I use a
BC2500xlt or a BC245) along for quick programming... but don't use it
all that much.

Not the greatest unit ever produced. Based around the "logic" of the
AR2515 that was itself a modified AR2002 by ACE Communications but much
faster and with considerable more memory.

As for software a package produced by GESMUNDO was originally available
for it but the only other package to support it that I can recall was
ScanCat (DOS version).

Hi Everyone:

I recently downloaded Harping program from www.harpingmidi.com on the advice of the knowledgeable harpsters from this newsgroup. Thanx, I love it. The program does everything that I need at this time in my harp playing experience.

BUT, I am having trouble finding Harmonica MIDI music files on the Web to download to play through the program. So, my question is.....

What are your 5 favorite Harmonica MIDI music file websites?

Thanx to all on the group for taking time in furthering my love of the of the Harmonica.

I just purchased the Unidex BC245XLT.

I downloaded and installed (on NT 4.0) the demo version of WinScan (2.1). When I click on New File..., I receive no data. Also, I do not know where to enter my zip code. Am I completely off track? Does the demo version do any downloading of frequencies?

If so, is this tool downloading the same data that the 1-900 number downloads?

Thanks in advance,
Frank

P.S. Is there a better 3rd party tool.

You mean does any scanner have the capability to allow the user to enter in
the ID of the transmitting station? The RS pro 92 and 93 have the ability
to do this.

None of the current generations of TrunkTrackers (Either Uniden or Radio
Shack's) have this feature. You could use a software program such as
Trunker to display subscriber radios ID's as they come up on the system.
With one radio following the data channel with Trunker and another used
for voice following you could see this real-time.

Go to Lindsay Blanton's wonderful website at www.trunkedradio.net for
Trunker and more info.

Hi David Monroe in Canada,I have the most special of all 2006's awaiting to grace your mailbox.

Features:Case with no Plastic (totally redone with x-ray proof whimsidookle for shipping of highly explosive parts)

LCD Display has been modified for direct injection of Hydrochloric acid directly to your face.(Only activated if you tell a lie)

Power Modification has been all done,you can attach it directly to your balls for the most intense scanning you have ever seen.

Ah yes and the most of the most of mods.....The DELAY. Delay has been totally redone.I'm so excited ,the delay has been arranged so that when you sit for x amounts of minutes in front of this glorious rig,scanning,ripping people off,sending bogus newsgroup ripoff messages,it senses your tenseness and automatically redirects your computer to the nearest frapping site on the internet...

And for you David what does this all cost,for you I think it should be free,yes even with all these fantastic mods that have been included,you pay nothing....kinda goes along with what you are - don't ya think??

Hi Peter ......

The subject of 4 level flex is enormous and the amount of
available information is equally large. This page is a good start ..

http://www.google.com/search?q=cache:Wyve3ITcOnUC:www.mazumiwireless.com/flex_messaging_protocol.pdf+flex+4+level+protocol&hl=en

it and as many as 16,500 (search flex 4 level protocol ... and
230,000 searching flex 4 level) like it are available at a search
engine called google

http://www.google.com/

you will find engines like Google and Yahoo ..extremely useful
for subjects with so large an information base. The information
available there is likely to be WAY more complete and useful
than that type of information found here in this News Group.
At least , it would be a great starting place , maybe seeking
fill-in or clarification information on this news group ..or even on
one of the pager related NGs like alt.cellular .motorola ...
alt.cellular.tech ... where people that actually work on them
are hanging out.

I even use Google " when ever " I'm looking for a ANY type of
information and have found it " hugely " helpful nearly every time.

I recommend it ....

krackula

Hi Dan,
Quick question...does the B designation indicate the latest firmware version?
I'm not up on pro92 info yet, but I understand 3.28 is the latest firmware
version.
What version is the radio?
Not to worry on the stock ducky...got a whole pile of them in a box around here

somewhere....*s*...send a pic ok?
Thanks,
John

Hi there,
I have 5 scanner for sale,

-Pro-46 100 channel hand held, cellular capable in good condition
asking $150 plus shipping

-BC-3000XLT excellent condition, with box and manual, has been sitting
for a while and will need the battery replaced about $20
asking $130 plus shipping

-BC-760XLT 100 channel monile, not cellular capable,as ggod as new in
the box with all accessories
asking $140 plus shipping

-Pro-2041 400 channel base unit, mint condition with manual
asking $125 plus shipping

-Pro-2046 100 cahnnel mobile, with manual and mounting bracket,
excellent condition, recieves 800mhz, cell blocked
asking $75 plus shipping

I have pictures available if needed
Please e-mail me directly at the below address for any questions
Thanks-Russ rusty@dccnet.com

About the reasons why it is practised other than personal preference, in several countries, or in certain minor cultures (specially in the Mediterranean area), anal intercourse is not eminently intended as a contraception method, but mainly as a way to perform sexual activities while preserving female virginity until marriage, this quality being sometimes the main virtue of a wife (and its loss before a formal marriage resulting in the worse moral crime a woman could commit).
Especially in less developed areas, a severe tradition regarding the first wedding night required that "the morning after" the husband exposed on a balcony the sheet used for nuptial bed, which had to present an evident blood spot, as a proof of previous chastity of the wife, presuming that the defloration necessarily produces bleeding (since this does not necessarily happen in every case, the lack of the sheet's exposition, or of the spot, could cause serious troubles to both, even in the case of a perfectly innocent woman who simply failed to bleed). Virginity, and its "correct" loss, had to be demonstrated this way to the public, as a matter of public relevance.

The reason why women accepted the practice of anal sex before marriage has to be therefore found in the need of offering a material proof of love, so that the promised spouse would not lose interest in them, marriage being the principal scope of a woman (in these cultures), without which she would be worth nothing. It has to be recalled that in small villages there were old women (former midwives) specialised in examining the conditions of hymen before the wedding.

In the same mentality, women were not officially allowed to find pleasure in sex, therefore sex was only served as a sort of marital prostitution; in this sense, under the sole husband's determination, anal sex was a form of contraception too in the case of couples who already had too many babies, since the ignorance about other methods was total. Similar facts were reported up to a very few decades ago, and it is currently impossible to certify whether this mentality has been totally abandoned or has otherwise been substancially modified.

> who really uses DCS? a few agencies in the whole country?)

Surprisingly, DPL/DCS comes in *amazingly* handy if one is scanning at car races. (I'd say probably *most* NASCAR Busch and Winston Cup frequencies, including the race control channels NASCAR themselves use, use DPL; a few are still using PL tones.)

I would also note that at least at some tracks (Bristol Motor Speedway among others) DPL/PL capability is almost *essential* if one doesn't want to deal with rather severe bleedover/interference problems. (Seventy-odd people broadcasting in a rather limited frequency space--in combination with all the OTHER traffic such as initerants, the usual business frequency users, etc.--means interference, which means DPL becomes essential.)

Incidentially, part of why car drivers have gone to DPL largely is the space in normal CTCSS tones isn't quite large enough, especially if one is dealing with fifty-odd users and around 200 frequencies, some of which are shared among teams. :)

(As a minor aside, yes, I do race scanning, and right now there are maybe two or three scanners on the market (the Pro92/Pro2067, the Relm/Racing Electronics RE2000 Alpha, and one of the newer Uniden models) that do have PL/DPL built in. Enough people have discovered how darned USEFUL PL/DPL capability is in a scanner that an awful lot of frequency guides for races include the DPL codes along with scanner frequencies :)

> 500
> channels?! I can barely fill half of the ones in the 2053 I have.

Depends on the area and what one is using the scanner for. Monitoring just police, fire, ambulance, hams, utilities, railroad and marine frequencies in my area (just outside of Louisville, KY) I can EASILY use up the 500 channels--and this isn't even including the trunking systems in use in my area, and this is just including the conventional frequencies in around a 10 mi radius! There is *no* way I could fit even all the police/fire/rescue frequencies plus utils on a Pro93; especially true if I want to do trunking of just the country trunked system.

> What's LTR trunking? Does anyone use it?

LTR is a trunking system used largely by businesses and the like--we have around four or five systems alone (including Business Radio and two separate systems run by Ford Motor Co.) that use LTR around here--in fact, LTR is actually more common than EDACS and is about even with Motorola systems around here.

The few non-LTR systems here include the county trunked system (mostly airport rescue and public works at this point, a strange little Motorola type IIi hybrid system), a brand new unknown-type system for the county school system, a small EDACS system run by General Electric, Radioland's Motorola type II, and UPS' monstrous Type II system. (The state police just converted to an ASTRO 25 digital system, but I don't count that because there isn't anything out yet that can decode it, and there won't be anything out for some time that isn't $800 a pop that can :P)

1240. MURS Radio Service is Starting to Grow

Newsgroup: rec.radio.scanner
Date: 2002-03-28 02:07:14 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0203271807.3c05cbca@posting.google.com>
Source record: 50155

After a tentative beginning, overshadowed by Motorola's initial attempts to ban the service, and later attempts to water down the external antenna and data/telemetry permissions, the MURS service has gained a foothold, and is starting to see significant growth, with a number of manufacturers beginning to offer MURS-specific solutions.

MURS (Multi-Use Radio Service) is a fairly new no-license VHF personal radio service which operates on 151.820, 151.880, 151.940, 154.570, and 154.600 MHz with a maximum ERP (Effective Radiated Power) of 2 watts. The FCC MURS rules permit voice, data, and image communication; as well as external antennas. Unlike the Amateur Service, there are no restrictions on business activities with MURS, and the 2W ERP limit works as a major benefit for building a nationwide Internet-backboned public-access wireless network. Any low-power VHF business radio capable of meeting the newer FCC-mandated 7.5Khz channel spacing and 11.25Khz bandwidth limitations(most manufacturers refer to this as 12.5Khz channel spacing), can be used on the MURS frequencies; this includes most handheld business radios built after 1995, as well as some mobile radios, such as the Radio Shack 19-1210.

For discussions and more information on MURS, see:

http://groups.yahoo.com/group/MURS-OPEN/

They should try not to slash so hard. If you can prevent them from slashing so hard then the slip fielders may be spared.

Also if they are really that hazardous, perhaps the slip fielders and the keepers should try to improve their catching techniques?

Cheers

Hi

I was wondering how to prevent keypad wear-out, and I mean the numbers disappearing off the buttons. Is this caused by the secretions from the fingers? If so, would a crude solution like putting a piece of saran wrap over the keypad prolong the whiteness of the numbers?

Thanks

I know, I already use Trunker / E-trunker, but I was just wondering
if a scanner is already capable of capturing the Radio-ID's.

Thanks anyway :)

Oh that makes a lot of sense. Waste a lot of your time telling her to do things the hard way.
It's that kind of thinking that really pulls civilization forward.

How do you know she hasn't already searched?
More to the point, that's why society invented questions. To find out something that someone already knows, so the work won't have to be redone. Imaging all of those questions that have been asked throughout history. Now Bozo you tries to thwart that cause you had to do some work, but in the end you had to *ask* someone or some computer the same question anyway. Yet you claim you did all the work yourself. No, you found out from somewhere because you asked.

As if his question has something to do with you and the trials you've been through.

As the saying goes, lead , follow, or get out of the way. It does not say OBSTRUCT people.

Seems Q's usage of "maroon" was ironic: a "maroon" is "a fugitive Negro slave of the West Indies and Guiana in the 17th and 18th centuries". I bet you didn't know that when Bugs Bunny said it!

I like the Conrad quote, Jason.

No doubt that it would help but would Probably be a big pain contending with the wrap. It might be easier to just order a new set (or two) of button covers (it's usually just a single sheet that covers all) while parts are still available for your scanner. It's too bad the manufacture can't just stamp the panel instead of the rubber buttons.

I use a piece cut out from those page protectors that you put documents into. It's a little heavier plastic and it sort of clings together if you wrap it on itself. I use it for my BC245xlt, since there are two big holes in the leather case where the keypad and display are. I just wrap it around the scanner, then put the case on and there you go. On one of my scanners I even went as far as to turn the case inside out and super glue the piece of plastic over the hole and then turn the case right side out and that works great. I get about 1yr out of the plastic before it starts to look tatered.

Just my two cents.

Keypad wear-out is not caused so much by the secretions of your fingers as it is the moisture in your breath. Put a roll of Saran Wrap around your head.

Gee! It looks like my question created quite a stir!

I apologize.

You see, I am 60 year old grandmother of 4 and I am blind. I must conduct all of my business over the phone. I am able to send limited email with my transcriber, but I am not able to search the "web" as you call it.

So you see I want to make sure that my telephone calls are secure. A friend of mine warned my that my calls me be scannable, so I am desperate to find out.

I did call Uniden, and they would not tell me. I also called the FCC and got no response. In fact I can't seem to get help anywhere.

I appreciate your thoughtfulness, and I am most happy to find out for my self, I just don't know where to start.

So I did not expect to get a big bowl of idiocy from you jackass moron clowns. If I could make you a heaping plateful of Grandma's shove it, it would make me happy. You obviously were shortchanged by the Lord, your perents were alcoholic zoo animals.

"What it's worth" is what someone is willing to pay for it. Check eBay's completed auctions. These days, this is the most accurate indication of "real world" pricing on any given item.

1290. Comments on PRO-2053: Pro or Con ?

Newsgroup: rec.radio.scanner
Date: 2002-03-29 15:16:03 UTC
From: leadenwah@aol.com
Message-ID: <20020329101603.16889.00000608@mb-mh.aol.com>
Source record: 50103

I'm interested in any opionions from users of the PRO-2053 scanner. I'm conisdering one for a friend who will use it only at home.

I wasn't sure if you could program the Alpha-Numeric talk group ID tags into this one like you can with the 2067.

Many thanks,
Geo.

1291. What happened to MESSAGE TRACKER?

Newsgroup: rec.radio.scanner
Date: 2002-03-29 15:19:33 UTC
From: leadenwah@aol.com
Message-ID: <20020329101933.16889.00000609@mb-mh.aol.com>
Source record: 50104

Does anyone know what became of K&L Technology's MESSAGE TRACKER?

This was the serial interface and software used for monitoring alpha numeric paging systems. It could read POCSAG and GOLAY and perhaps other forms.

I wondered if MESSAGE TRACKER could copy some of the MDT traffic?

Thanks,

Geo.

1292. Cops using Laptops not MDT's

Newsgroup: rec.radio.scanner

Heh, reminds me of a year ago when I was in Iowa with friends and we stopped at this bar in the middle of
nowhere, right next to some farmlands. We got drunk and started fooling around. At one point we made a bet - I
boasted that I could bring a cow to an orgasm in 5 minutes.

So we got out, walked for about 6 minutes to the nearby paddocks, I jumped over the fence and there was a
bunch of sleeping cows on the ground. So I sneaked up behind one, dropped my pants, lifted up the tail, used
the fingers to spread the entry, and moved in all the way. But the thing is quite loose, so I inserted the index and
middle finger of my right hand as well, while keeping the tail out of the way with left hand. Done that, started
pumping in and out. The cow woke up, got confused at first, but then it frightened her and she started thrashing
around. I kept balance for a bit, but then lost control and she has thrown me away. Lost the damn bet.

But that was good fun, the problem started later. A few days after, I got a rash on my genitals, the scrotum
started itching and got red. I went to the doc, he looked at it, then slowly looks back at

me and first thing he
says "You havent been doing anything with farm animals, have you?". Oh man, that was so embarassing. I
couldnt admit it with a straight face and mumbled some excuse. He gave me a cream that I had to apply to the
affected area daily, and the problem passed after a week or so.

They could be like most of British Columbia. These termonals in our cars are laptops. The way they are set up here may differ from other places. This came from a techie. These laptops are now CDPD. CDPD is a ecrypted digital data signal. Ran in the cellular phone band on unused 800 Mhz frequencies. CDPD is getting more popular day by day. I know they used to use modified phones that hookedup to the CDPD terminals in the trunk, then it went to the laptop.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you
will find lists of Ontario radio frequencies that are not listed on any web page, published
in any scannner book (Haruteq or Scantrix) or listed in the government frequency list
(Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner
radio hobbyists so they have a public forum to be able to chit chat with each other about
anything relating to the radio scanner hobby in Ontario as well you will be able to recieve
updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

Ontario Unlisted Frequency Guide - http://oufg.webhop.net/

Geo,

I'm presuming you are in Charleston County, S.C. Chances are the county sheriffs are using CDPD. I don't think they have their own dedicated conventional 800 MHz frequencies for data.

Consider posting your request on the CharlestonScan list on Yahoogroups. One of the members should be familiar with the county's laptop use.

Jeff Multer

I have a cellular phone that dies and I need a group or help what to look for. it is past warranty. it is A erickson Model 280. AT&T said to toss it but I figure if I get it going I have an extra phone. It receibves no power and won't charge and display is out. has to be in some kind of power from battery that is charged on phone circuit. Is it possibe to fix myself. Nick

Do frequencies for a trunked system need to be put anywhere special?

For all of the trunked systems I've got programmed in, I've got them as the first few freqs in the channel. Is it ok to have them at the end? As long as they're in the right order?

Mike

Scanner buyers know better. He probably said that just to confuse Ebay. (Ebay staffers don't know
their gigas from their megas.) Ebay will not let him sell if he advertises that it has been cellular
modified. But if you will look at the pictures, you will see it is currently tuned to 888.9600 MHz.
Many Ebay scanner sellers display their modified radios this way, using the picture to show the cellular
capability.

Hi All,
Just a quickie to let you know that MCQ_LOG has been released. Those people who previously registered their interest will find a copy of the database in their mail-box.

If you've never heard of it before, MCQ_LOG is a totally free SWL LOG that I created purely for my own use but decided to offer it to the Public Domain. Many people asked for modifications to the database to suit their individual needs and I accomodated as many as possible.

To find out more about the database, go to :
http://www.tom.mcq.btinternet.co.uk/ar3000/mcqlog.htm

1331. Congress moves to Ban Certain Receivers, New Addition to Home Security Act

Newsgroup: rec.radio.scanner
Date: 2002-03-30 23:29:37 UTC
From: congress@gone.crazy.org
Message-ID: <a85hqm0318l@enews4.newsguy.com>
Source record: 50146

Senator Leahy, Democrat - Vermont, has proposed a new Senate Bill. The bill with 25 co-sponsors will enhance the US Home Security Act by:
1. Banning digital capable receivers from being sold, imported or manufactured in the USA that receive frequencies in the listed ranges in part 2.
2. Ban the reception of any frequencies in the:
a. 30-49.999 MHz range
b. 72-75 MHz Range
c. 108.1-174 MHz Range
d. 225.0001-512 MHz range
e. 700-1239.9999 MHz Range, excludes TVRO until 2010
3. The bill has no effect on licensed radio systems and commercial transceivers such as cellular telephones, cordless phones or TVRO systems.
4. The penalties for having a receiver with this capability will be a $500,000 fine and 10 years in prison.
5. There is an exemption for law enforcement and local government stations. For example a local volunteer fire fighter will be obtain a permit from the FCC to have a receiver. The FCC is allowed to charge a $25 administrative fee for each permit application.
6. Amateur radio transceivers will be required to block expanded receive capability in part 2 frequency ranges, but current ham radio transceivers will have a grandfather clause until 2006. However, it will be illegal for amateur radio operators to listen to any frequency in part 2.

It depends what kind of system you are tracking. Motorola systems it doesn't matter where you put it. EDACS needs to be put in a certain order at certain places in the bank.

1336. FS: AOR AR8200 MKIIB RECEIVER & MANY EXTRAS-one day left!

Newsgroup: rec.radio.scanner
Date: 2002-03-31 00:45:48 UTC
From: ads@athomesafe.com
Message-ID: <3ca65bf6.22690468@news.directvinternet.com>
Source record: 50049

AOR AR8200 Mark II B in EXCELLENT condition with lots of extras!!!

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1341839281

ONLY ONE DAY LEFT! PRICE IS VERY LOW RIGHT NOW!

This is an AOR 8200 MKIIB (European version) scanner in excellent condition along with all the accessories needed to fully exploit its incredible capabilities. The scanner is a full coverage radio from low band through shortwave frequencies and on up through UHF. The complete specifications for the radio are available at : http://www.aoruk.com/8200.htm

The AR8200 has sophisticated programming functions that are accessible via the keypad or which can be controlled through a computer interface. Included is a JAV-232 computer interface from Javiation with the OS-8200/DIN lead that is required to use the interface with the AR8200. I am including an extra computer control plug and cable for use with your custom application. A &#65533;custom&#65533; prepared cable is included for the interface that is designed for recording the audio out from the radio and for tapping the discriminator output from the radio. A complete description of the interface is available on the Javiation web site : http://www.javiation.co.uk/

Included is a registered copy of the latest Butel computer programming software that makes setup and frequency management of the radio simple. Details of the Butel ARC8200 software are available at their web site : http://www.butel.nl/ A computer is necessary to use the Javiation interface and the Butel software. A computer is not included in this auction.

The radio also comes with a reaction tuning interface cable for use with the Optoelectronics Scout frequency finder. This auction does not include the Scout, however, a description of it can be found on the Optoelectronics web site: http://www.optoelectronics.com/scout.htm

For shortwave listening, I am including the Grove Enterprises &#65533;Active Duck&#65533; amplified antenna. This antenna does an incredible job of pulling in the HF stations. If you are going to listen to shortwave in a portable situation, this antenna is really a great item to have. Full details are available on the Grove web site : http://www.grove-ent.com/ANT36.html

For descrambling voice inversion encrypted transmissions, included is the VI-8200 - Voice inverter card. The VI8200 enables the AR8200 to recover intelligible audio from certain types of analog transmissions

which would otherwise sound scrambled. They operate by splitting up the audio spectrum and "flipping" the upper and lower tones around a certain frequency point. The VI8200 enables 157 different "flip points" to be selected in the frequency range of 2.4kHz to 5.6kHz.

The features of the AR8200 include those listed below. For complete information, visit the AOR web site and read the review on the Strong Signals web site : http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=fi&class=recv&num=020

Frequency coverage 530 kHz ~ 2040 MHz
All mode reception with Super narrow FM plus Wide and Narrow AM in addition to the standard modes (CW, SSB, etc.)
True carrier re-insertion in SSB mode
Re-progammable Band Plan
Alpha tagging of Scan, Search and Memory Banks
RF preselection of mid VHF bands
Detachable MW bar aerial with negative feedback
14 Segment S-meter
Tuning steps programmable in multiples of 50 Hz in all modes, 8.33 kHz airband step correctly supported
Step-adjust, frequency offset, AFC
Noise limiter & attenuator
Versatile band scope with save trace facility and 7 ranges
Twin frequency readout with 14 segment bar signal meter
Battery save facility with battery low legend
Separate controls for volume & squelch
Arrow 4-way side rocker with separate main tuning dial
Configurable keypad beep / illumination & LCD contrast
Write protect & keypad lock
Programmable scan & search including LINK, FREE, DELAY, AUDIO, LEVEL, MODE
Computer socket fitted for control, clone & record
Flash-ROM memory (no battery required)
Voice inverter card
Accessories Included: Whip Antenna, MW Bar Aerial, 4 AA NiCad Batteries, AC Charger, Cigarette Adapter, Hand Strap, Vinyl case Belt Hook with 2 screws, Operating Manual.
In summary, what you are bidding on is an AR8200 scanner in excellent condition with all factory accessories and manual in the original box, a JAV-232 computer interface with the necessary control cables, Butel computer setup software, a voice inverter option card, an Optoelectronics reaction tune cable, and a Grove Active Duck antenna. Because this was purchased abroad, it did not come with a 110 VAC adapter. I have prepared a 110 adapter/battery charger by installing the proper sized connector on a suitable wall power supply (included).

The terms of the auction are as follows: Expertly packed and shipped as soon as payment is received. Winner to pay fixed shipping costs of $8.95 for insured Priority Mail. Payment is to be received within 10

days of the auction close in the form of Paypal, money order, personal check or cashiers check. I reserve the right to cancel bids from buyers with excessive negative feedback.

This is a sweet little receiver for anyone with serious listening needs be it for police or emergency calls, amateur radio (ham), commercial or military listening or whatever. I spent some effort acquiring this set of accessories but I must part with it to fund other projects. The radio has had very little use and is in excellent condition. I warranty it not to be DOA.

This is a fairly complicated radio that requires some effort on the part of the operator to utilize all of its features. Please serious bidders only. Thanks for looking and good luck!

Taking a moment from the Fredricks catalog, congress@gone.crazy.org spake thusly

> Senator Leahy, Democrat - Vermont, has proposed a new Senate Bill. The bill
>with 25 co-sponsors will enhance the US Home Security Act by:
>1. Banning digital capable receivers from being sold, imported or manufactured
>in the USA that receive frequencies in the listed ranges in part 2.

That's odd, I didn't find any such bill mentioned on the link you provided.

geeze, and i thought only muslim fanatics hated america.

here's another guy that does.

"This difference between liberalism and conservatism
must not be obscured by the fact that in the United
States it is still possible to defend individual
liberty by defending long-established institutions.
To the liberal they are valuable not mainly because
they are long established or because they are
American but because they correspond to the
ideals which he cherishes."

F. A. Hayek in "Why I am not a Conservative"

1346. For Barter: ICF-2010

Newsgroup: rec.radio.scanner
Date: 2002-03-31 02:56:21 UTC
From: at_the_helms@yahoo.com
Message-ID: <621d1b6e.0203301856.180e3eec@posting.google.com>
Source record: 50058

I have a Sony ICF-2010 for barter.

It was purchased new in 9/97 from Grove Enterprises, and comes with original packaging, related materials and receipt. I keep it covered when it's not in use and even oil the antenna periodically. It's in perfect, unaltered factory condition, but I simply don't have the time to devote to the radio much any more.

I'd like to trade it for a decent 800MHz handheld scanner (preferably unblocked), transceivers of any type, or a base CB unit in similar condition. Mods are OK as long as long as it improved performance and was done professionally.

I paid $364 for the 2010, but I'm not expecting a dollar-for-dollar exchange here - just a fair swap for respectfully handled gear that I have a realistic use for. I'll consider anything you've got, except for junk and stolen property.

I think it's only fair that we each pay our own insured shipping. If you're interested, please contact me directly. I'm in no hurry and Thank You.

Although I'm not familiar with the high band unit, they had a series of low band receivers with model numbers starting with "HA."

The size was closer to 2x5x7, with a rotary six-position channel selector. There was a lighted window in the 12 o'clock position, so you could see which channel was selected at night.

The only other controls were volume and squelch. The rear connector was an SO-238. The speaker fired through a grill in the underside cover.

The low-band version could handle a 2-meg spread, so there was a model for 31, 35, 39, 42 and 45 MHz.

Lafayette Electronics (Long Island, N.Y.?) discontinued the low band receivers around 1971.

I had an "HA-39" ... the 39 MHz receiver. The receiver you might be looking for may have a model number along the lines of "HA-155" or similar.

Good luck, John.

Oral sex is the term used for all sexual activities involving the use of the mouth, tongue, etc., to stimulate the sex organs. Done on the genitals of a man (especially the penis), it is technically called fellatio. (The street term for an act of fellatio is blow job.) Done on the genitals of a woman (the vulva and especially the clitoris), it is technically called cunnilingus. Most people usually use euphemisms or slang terms when talking about oral sex.

Oral sex has been taboo to a greater or lesser extent in many Western countries since the Middle Ages. Some activities are actually illegal in some jurisdictions.

Oral sex is considered a superb method of contraception (birth control), since pregnancy is impossible unless semen (sperm) comes into contact with the vagina or vulva. Many heterosexual people often use oral sex for this reason.

Many people find oral sex very pleasurable. In particular, receiving oral sex is for many women one of the better ways or reaching orgasm. Thus oral sex is used for pleasure even when avoiding pregnancy is not a concern.

Oral sex can be enjoyed in a wide variety of positions. Normally one partner performs while the other receives, but it can be performed by both parteners at the same time in a "sixty-nine" position.

Could somebody explain how these telephones work? I thought that you
weren't suppose to beable to pick these up on scanners in the 900 range.
Thanks

Absolutely not. The "900 range", is 900MHz. The 2.4GHz band is 2400MHz,
over 2.6 times higher frequency. In addition to that, many of the 2.4GHz
phones are using digital spread spectrum, which in two words or less, means
no way!

some 2.4 gig phones do that. where I forget which. The handset tx's in 900
or the base tx's in 900. and the other is 2.4 gigs. but. someone here should
be able to tell you which one does. I even heard a few 2.4's do this too.
some companies make these.

We can put a man on the moon, Carrot Top makes a good living for himself, yet we cannot intercept 2.4 gig transmissions via a scanner? Won't this *ever* be possible?

1369. 8 Hours Left on AOR AR-8200 Mark IIB Auction! Lots of Extras- going cheap!

Newsgroup: rec.radio.scanner
Date: 2002-03-31 20:06:09 UTC
From: ads@athomesafe.com
Message-ID: <3ca76bea.6473515@news.directvinternet.com>
Source record: 50082

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1341839281

or do an Ebay search for item 1341839281

This thing ROCKS! Check out all it comes with! It's got the VI-8200 Voice inverter card, JAV-232 PC interface, registered Butel Software, Scout cable, a Grove "active" antenna, car charger, case, box, manual, etc!

Auction price is still VERY low and NO RESERVE!

ONLY 8 HOURS LEFT IN THE AUCTION!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Description:

This is an AOR 8200 MKIIB (European version) scanner in excellent condition along with all the accessories needed to fully exploit its incredible capabilities. The scanner is a full coverage radio from low band through shortwave frequencies and on up through UHF. The complete specifications for the radio are available at : http://www.aoruk.com/8200.htm

The AR8200 has sophisticated programming functions that are accessible via the keypad or which can be controlled through a computer interface. Included is a JAV-232 computer interface from Javiation with the OS-8200/DIN lead that is required to use the interface with the AR8200. I am including an extra computer control plug and cable for use with your custom application. A custom prepared cable is included for the interface that is designed for recording the audio out from the radio and for tapping the discriminator output from the radio. A complete description of the interface is available on the Javiation web site : http://www.javiation.co.uk/

Included is a registered copy of the latest Butel computer programming software that makes setup and frequency management of the radio simple. Details of the Butel ARC8200 software are available at their web site : http://www.butel.nl/ A computer is necessary to use the Javiation interface and the Butel software. A computer is not included in this auction.

The radio also comes with a reaction tuning interface cable for use with the Optoelectronics Scout frequency finder. This auction does not include the Scout, however, a description of it can be found on the Optoelectronics web site: http://www.optoelectronics.com/scout.htm

For shortwave listening, I am including the Grove Enterprises ?Active Duck? amplified antenna. This antenna does an incredible job of pulling in the HF stations. If you are going to listen to shortwave in a portable situation, this antenna is really a great item to have. Full details are available on the Grove web site : http://www.grove-ent.com/ANT36.html

For descrambling voice inversion encrypted transmissions, included is the VI-8200 - Voice inverter card. The VI8200 enables the AR8200 to recover intelligible audio from certain types of analog transmissions which would otherwise sound scrambled. They operate by splitting up the audio spectrum and "flipping" the upper and lower tones around a certain frequency point. The VI8200 enables 157 different "flip points" to be selected in the frequency range of 2.4kHz to 5.6kHz.

The features of the AR8200 include those listed below. For complete information, visit the AOR web site and read the review on the Strong Signals web site : http://www.strongsignals.net/access/reviews/reviews.cgi?type=display&rtype=fi&class=recv&num=020

Frequency coverage 530 kHz ~ 2040 MHz
All mode reception with Super narrow FM plus Wide and Narrow AM in addition to the standard modes (CW, SSB, etc.)
True carrier re-insertion in SSB mode
Re-progammable Band Plan
Alpha tagging of Scan, Search and Memory Banks
RF preselection of mid VHF bands
Detachable MW bar aerial with negative feedback
14 Segment S-meter
Tuning steps programmable in multiples of 50 Hz in all modes, 8.33 kHz airband step correctly supported
Step-adjust, frequency offset, AFC
Noise limiter & attenuator
Versatile band scope with save trace facility and 7 ranges
Twin frequency readout with 14 segment bar signal meter
Battery save facility with battery low legend
Separate controls for volume & squelch
Arrow 4-way side rocker with separate main tuning dial
Configurable keypad beep / illumination & LCD contrast
Write protect & keypad lock
Programmable scan & search including LINK, FREE, DELAY, AUDIO, LEVEL, MODE
Computer socket fitted for control, clone & record
Flash-ROM memory (no battery required)
Voice inverter card
Accessories Included: Whip Antenna, MW Bar Aerial, 4 AA NiCad Batteries, AC Charger, Cigarette Adapter, Hand Strap, Vinyl case Belt Hook with 2 screws, Operating Manual.
In summary, what you are bidding on is an AR8200 scanner in excellent condition with all factory accessories and manual in the original box, a JAV-232 computer interface with the necessary control cables, Butel

computer setup software, a voice inverter option card, an Optoelectronics reaction tune cable, and a Grove Active Duck antenna. Because this was purchased abroad, it did not come with a 110 VAC adapter. I have prepared a 110 adapter/battery charger by installing the proper sized connector on a suitable wall power supply (included).

The terms of the auction are as follows: Expertly packed and shipped as soon as payment is received. Winner to pay fixed shipping costs of $8.95 for insured Priority Mail. Payment is to be received within 10 days of the auction close in the form of Paypal, money order, personal check or cashiers check. I reserve the right to cancel bids from buyers with excessive negative feedback.

This is a sweet little receiver for anyone with serious listening needs be it for police or emergency calls, amateur radio (ham), commercial or military listening or whatever. I spent some effort acquiring this set of accessories but I must part with it to fund other projects. The radio has had very little use and is in excellent condition. I warranty it not to be DOA.

This is a fairly complicated radio that requires some effort on the part of the operator to utilize all of its features. Please serious bidders only. Thanks for looking and good luck!

I know that the laptop is the mean to communication as far as the terminal. The problem is the frequency the system uses right? I mean the laptop (MDT system) is simply plugged into a radio. THAT radio can be convention simplex freq to trunking 800 to cell phones. Please let me know if I am wrong on that since I have seen new Motorola MW520 systems simply plug into the radio with is a trunking 800 MHz system. I am willing to bet that same system could be used with a cell phone system. I have seen another agency (constables) actually buy their own laptops (Compaq,Dell,IBM) and have the MDT program installed on their laptop. The laptop serial cable is then connected to a radio and communications is completed in that manner. The Constables loved it since they could get laptops with DVD players in them ;)

Other systems such as the Motoroal MW520 systems are fixed PC systems with only the MDT in a type of flash bios installed on a RAM-Drive during bootup, but it may be a HD in there as well.

I want to make the little data slicer that's been floating around the net for some time, found here:
http://www.trunkedradio.net/trunked/trunker/circut.gif

I am unclear on a few things though. Are C1-C3 electrolytics or are they just regular unpolarized caps? Or is it just C2 and C3 that are the electrolytics and if so, which way are they oriented? Are there any specific types of capacitors I should use (ceramic vs.......)?

Thanks!

Frequency coverage 530 kHz ~ 2040 MHz
All mode reception with Super narrow FM plus Wide and Narrow AM in
addition to the standard modes (CW, SSB, etc.)
True carrier re-insertion in SSB mode
Re-progammable Band Plan
Alpha tagging of Scan, Search and Memory Banks
RF preselection of mid VHF bands
Detachable MW bar aerial with negative feedback
14 Segment S-meter
Tuning steps programmable in multiples of 50 Hz in all modes, 8.33 kHz
airband step correctly supported
Step-adjust, frequency offset, AFC
Noise limiter & attenuator
Versatile band scope with save trace facility and 7 ranges
Twin frequency readout with 14 segment bar signal meter
Battery save facility with battery low legend
Separate controls for volume & squelch
Arrow 4-way side rocker with separate main tuning dial
Configurable keypad beep / illumination & LCD contrast
Write protect & keypad lock
Programmable scan & search including LINK, FREE, DELAY, AUDIO, LEVEL,
MODE
Computer socket fitted for control, clone & record
Flash-ROM memory (no battery required)
Voice inverter card
Accessories Included: Whip Antenna, MW Bar Aerial, 4 AA NiCad
Batteries, AC Charger, Cigarette Adapter, Hand Strap, Vinyl case Belt

Hook with 2 screws, Operating Manual.
In summary, what you are bidding on is an AR8200 scanner in excellent condition with all factory accessories and manual in the original box, a JAV-232 computer interface with the necessary control cables, Butel computer setup software, a voice inverter option card, an Optoelectronics reaction tune cable, and a Grove Active Duck antenna. Because this was purchased abroad, it did not come with a 110 VAC adapter. I have prepared a 110 adapter/battery charger by installing the proper sized connector on a suitable wall power supply (included).

The terms of the auction are as follows: Expertly packed and shipped as soon as payment is received. Winner to pay fixed shipping costs of $8.95 for insured Priority Mail. Payment is to be received within 10 days of the auction close in the form of Paypal, money order, personal check or cashiers check. I reserve the right to cancel bids from buyers with excessive negative feedback.

This is a sweet little receiver for anyone with serious listening needs be it for police or emergency calls, amateur radio (ham), commercial or military listening or whatever. I spent some effort acquiring this set of accessories but I must part with it to fund other projects. The radio has had very little use and is in excellent condition. I warranty it not to be DOA.

This is a fairly complicated radio that requires some effort on the part of the operator to utilize all of its features. Please serious bidders only. Thanks for looking and good luck!

For C2 and C3 I used Tantalum capacitors from RS, and yes they are polarized. Just connect the + side of the capacitor to where the circuit diagram indicates +.

Just for Karen and Terrys' info incase they aren't aware.
It is illegal to listen to cordless phones as well as cell phones in the US.

Having said that, if you do not tell any one that you listened to them, who is
to know.

1388. Anyone listening to SCA stuff?

Newsgroup: rec.radio.scanner
Date: 2002-04-01 06:17:41 UTC
From: "Matt J. McCullar" <mccullar@flash.net>
Message-ID: <9YSp8.1750$Mo2.294055027@newssvr15.news.prodigy.com>
Source record: 50001

SCA signals ride on commercial FM broadcast signals as a subcarrier. I bought the Ramsey kit that lets you listen to these signals and it works very well... I bought their FM radio receiver kit to go along with it to make it easier to interface the SCA, and learned enough from that to be able to attach the SCA decoder to other FM radio receivers, such as junked-out car stereos. I've since bought an old tabletop radio receiver because it's got enough room inside to let me mount the SCA adapter on a permanent basis.

Listening to Fort Worth/Dallas SCA signals, I've picked up things such as digital data (don't know what info it's transmitting), foreign language news (I think it's Korean), and even country music (riding on the signal of a country music station, but different songs!).

I'm just wondering what other folks can tune in on SCA signals elsewhere.

I'm also wondering if Muzak still does SCA stuff or if they've switched to satellite downlinks. I hear music in fast-food joints with no commercials.

"Stop the Muzak -- 25 cents."

I've had the radio since October and I must say it's an exceptional performer on UHF and it's features are great, they take a little while to get used to but read the manual, it's quite well written!

I'm only using the standard Rubber Ducky aerial and have found that it's quite a poor performer on VHF Airband. I live about 15kms from the Airport and I have to have the volume up full to hear ATIS. When I'm at the airport it works like a dream so I would say it would be an aerial issue. You can't expect the standard aerial to cover 0.1khz - 1300mhz perfectly. So I would suggest purchasing a seperate aerial for Airband.

Cheers Guys..

1392. Pro-2030 no squelch and low audio

Newsgroup: rec.radio.scanner
Date: 2002-04-01 07:45:19 UTC
From: Coppernoll <jc92033@navix.net>
Message-ID: <3CA8100F.B6F371DD@navix.net>
Source record: 50005

I was wondering if anybody who has previous experience with the 2030 could give any suggestions. I looked on the internet and couldn't find any schematics for it, and didn't see any parts on the board that were visibly damaged. I was connecting my pro 2030 to the PC's sound card like I've done before to decode digital signals and record audio. I wasn't getting it to work right on the discriminator tap (moded for over a year) or from the factory audio out so I disconnected it and tried normal listening. It still receives fine but it only has about 1/4 the audio power of before and no squelch action at all so I figured I could have had a shorted cable or something and it damaged the radio. Also its the newer revision that cannot receive cell.

Thanks
Jackson

I used to have an SCA box for the Physicians Radio Network (PRN)
that rode on KYXY (96.5) that played the sleepy "easy listening" Muzak stuff.
I traded that one off to someone who wanted to experiment with putting a tunable
tank in place of the xtal oscillator.
I don't know if he was ever successful or not.
And since I no longer have it, I don't know if Muzak is still there.
I still have one of the "In Touch Network" blind reading service units that
rides on KPBS (89.5).
I like to keep the volume sorta low,
and fall asleep while they are reading the newspaper,
then later I wake up informed, subliminally. ;-)

A good part of the problem isn't the antenna, but that fact that few scanners
are optimized for AM reception. AM calls on a scanner will almost always be
harder to understand than FM.

Try tuning around the PBS/NPR stations, they usually have a "Radio Reading Service" for the blind. Can be interesting. I've got pretty much the same as you, Muzak of one kind or another. Easy listening, Rock and Country along with data transmissions. Gets old after a while and makes you wonder why you bothered to go to all the hassle of getting it. At least thats the way I feel.

Ok, here's my two cents worth on this subject...
1 (Cent), the last time I checked, it already is ILLEGAL to intercept DIGITAL communications of any kind. So, this is another null and void law (Realizing that noone else has actually SEEN the bill in text anywhere).
2 (Cent), Personally, if making sure that everyone can use a DIGITAL Cell phone, or other wireless aparatus, will allow me to KEEP and USE my analog Scanner, then Where do I vote? Enough law enforcement agencies, and public service agencies (not mentioning aircraft, marine, and military) will continue to use ANALOG for quite some time.. I'm not worried about "Missing out on the action".
I'm speaking as a scanner AND a cell phone owner. I wonder how Congress@gone.crazy.org would feel if I were listening to his private cell calls... He probably doesn't use either a cell or a cordless phone (Analog, at least), because he knows that "WE ARE OUT THERE."
Pat.

It's not illegal to scan the 46MHz range. It is only illegal to intentionally monitor cordless phone calls in the 46MHz range. Baby monitors are open season, and as some have pointed out, can be quite entertaining!

I have a Yupiterau MVT7100 scanner, unblocked, in absoultely like new condition for sale. Comes with telescoping antenna, 4 AA ni-cads (hardly used), and a cigarette lighter charging cable. Includes instruction manual and original box. This is the most sensitive scanner I have ever used, but I have no more need for it.
You can see complete specifications at www.javiation.com if you are not familiar with the radio.
I will sell it for $200. You pay the postage.
Send e-mail if interested to DEdger@aol.com

It's not illegal to listen to a baby monitor on a scanner but has been illegal to reveal the contents of any transmission that's not a licensed, intentional broadcast since 1934. We can tell you it's interesting but any details are up to your imagination.

RJ-45 is a 8 pin networking end. sorta like a empreganated phone jack. If you are talking about a BNC to SMA or a SMA to BNC. You can find them cheap. Cheap if you buy froma electronic wholesaler. Expensive when you buy from a radio store. I usually buy half decent ones. they may even be better then half decent ones. In my eye they werk very well. Never wore out yet. andthey can be bought for less then $4 canadian wholesale.

No but I've unfortunately heard Gay neigbours jerking off to there gay talk lines. And lonely guys meeting women over the internet talking to there women over the cordless.

btw, it's legal here too, to listen to cordless.

Cells can be fun, but it's better to know who your neighbours are.

My advice, by a digital cell phone, and buy a digital cordless if you must have these.

: pickup truck.
:
: Jesus Rosalio Lopez, 27, Ramiro Roman Jr., 18, and a 17-year-old boy
: are in custody on charges of killing D.J. Hunter, a 19-year-old Fowler High
: School graduate and Reedley College student.
:
: Hunter, who was burned beyond recognition, was positively identified
: Wednesday through dental records.
:
: Firefighters found Hunter's charred remains and his stripped GMC
: truck about 6 a.m. Friday on South Muscat Avenue west of West Avenue
: southwest of Fresno.
:
: Hunter is the grandson of former Fowler Mayor Don Wright. His family
: owns an oil company in Fowler, a community of about 4,100 residents in
: south Fresno County.
:
: "You just get kind of numb," Sandra Feaver, a longtime family friend,
: said of Hunter's death. "Now you know it's real."
:
: The suspects also face charges including carjacking, robbery, arson,
: kidnap and receiving stolen property. They are being jailed in lieu of more
: than $1 million bail each.
:
: Feaver said Hunter's family is glad the suspects were arrested so
: soon: "People are so jealous of what other people have that they would take
: a life for a pickup. It's scary to know these people live in this area."
:

: Lopez and Roman were arrested during the execution of four search
: warrants on Fresno homes Tuesday. The boy was arrested after authorities
: found him riding in a car, sheriff's Sgt. Toby Rien said Wednesday.
:
: Tips from community members led authorities to the suspects, Rien
: said.
:
: Lopez is on federal probation for drug charges, officials said. It
: was not immediately known whether Roman or the boy have criminal histories.
:
: Authorities found stereo parts from Hunter's truck and other evidence
: inside the suspects' homes, said Rien, adding that his detectives are
: searching for more suspects. "This vehicle was stripped, and it takes a lot
: of people to do that," he said.
:
: Officials are investigating whether three guns found in the homes are
: linked to the crime.
:
: Although an autopsy has been completed, authorities have not released
: Hunter's cause of death.
:
: "This has been like a puzzle to our detectives, and we're putting the
: pieces in place," Rien said. "This still is early in the investigation. We
: have a lot of unanswered questions."
:
: Detectives don't believe the suspects knew Hunter before meeting him
: after 1:30 a.m. Friday at a convenience store in southeast Fresno. Rien
: would not name the store or say exactly where it is located.
:
: Hunter reportedly had left a friend's Fowler house about 12:30 a.m.
: Friday and was on his way home.
:
: "There really wasn't much of a connection other than being in the
: same place at the same time," Rien said. "Their meeting probably was not a
: positive one."
:
: The sergeant would not say what happened afterward, or pinpoint a
: motive.
:
: Rien, however, said "it's a possibility" the suspects killed Hunter
: to get to his truck, which is worth about $20,000 and had 20-inch chrome
: rims.
:
: The truck was voted best car by students at Fowler High School.
: Hunter, who played varsity basketball there, kept the truck spotless.
:
: Hunter's friends have tied yellow ribbons around light posts, taped
: photos of him around town and made key chains and car decals in his memory.

1437. tk500, new multiplatform, open source software for Yaesu VR-500

Newsgroup: rec.radio.scanner
Date: 2002-04-02 21:48:39 UTC
From: Bob_Parnass_AJ9S <parnass@megsinet.net>
Message-ID: <3caa294e$0$35575$272ea4a1@news.execpc.com>
Source record: 49953
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

The Yaesu VR-500 is a portable 0.1 - 1300 MHz receiver.

I wrote tk500, a new open source computer program for
Linux, Windows, and (perhaps) MacOS X which lets you:

(1) Read a memory image from the VR-500 receiver.

(2) Read an RT Systems .RDF file and extract the memory image.
(Thanks to Dan Wanchic, WA8VZQ for posting detailed
information about the RDF file layout.)

(3) Display data from a memory image using a graphical user
interface.

(4) Save a memory image in a template file.

(5) Extract memory channel information from a memory image
and export it to a .csv (comma-separated values) file.

This is an early, experimental version of tk500.
It will read data from the radio and let you edit it via
a graphical user interface.

However, I've not yet developed the software to write the
changes back out the radio.

You can learn about and download a beta test version of tk500
from my home page:

http://members.core.com/~parnass

I don't warrant the software, though it will cost you nothing.

1438. ACARS Log Analyser - new release available now

Newsgroup: rec.radio.scanner
Date: 2002-04-02 22:05:17 UTC
From: mark.avey@virgin.net
Message-ID: <21fc4b52.0204021405.304f0014@posting.google.com>
Source record: 49954

Hi all,

Log Analyser version 1.6.0 is now available.

This release adds the much requested WACARS Log Importing function.

This is a free upgrade for registered users. A demo and the upgrade can be downloaded from http://www.acarsonline.co.uk

(This is the release version and is now available from our main download site).

Thanks,

Mark Avey

What in the world are you trying to connect with this combination ?

The sma stuff is usually used for RF at high frequencies with coaxial
type cable and the rj-45 is for audio and computer networking with
several twisted pairs.

Maybe you ment to use another type of connector on one end ?

Isn't 870 to 890 Mhz supposed to be the tower side of the cellular band, therefore both sides of the conversation should be listenable (meaning 825 to 850 is the mobile side, where you hear only the other side of the convo). I ask because half of the cellular calls I hear in the 870-890 range are one-sided.

lol. To me canada is canada. the new $5 dollar bills I seen today are different. Sometime It happens that you hear only one side. Since it is not illegal to listen to cells in canada. I have had that a few times happen here. Maybe the input has both sides. I think it may be one of our 3 providers. since one pushes CDMA, the other TDMA, and the one Euro Uses. ummm. GSM. I know rogers is CDMA if I remeber and mobility the TDMA. and fido GSM. but. Maybe it is something with one of the networks. I never spent the time listening to the input to see if, for some reason they were reversed. Would be nice to know :)

Will electrical tape on a rubber antenna (I have a PRO-93 scanner) hurt reception in any way? My earpiece was hanging too low, so I folded the slack on the cord a bit, and used electrical tape to secure it to the antenna. Just wondering if this will effect my reception.

Thanks.

I had lousy luck with the Ramsey unit-but I did not use their FM radio, so maybe
I did not interface it properly.

The only PRN box I ever worked on(a wide squat black box, with a tv-style whip
and 2 knobs) was tunable-it took a while, but you could move it across the FM
band with nothing more than a alignment tool-I ended up moving it to the local
station that hosts the "In Touch Network".
Prehaps the unit you had was different though.

BTW, AFAIK, PRN is gone.

The tape should not cause problems, but the WIRE may-any metal close to an antenna
will affect it's performance-not always for the worse, BTW.
In general, it probably will not effect the performance much, but you may want to do
tests with and without the wire taped to the antenna.
Try this on as many different frequency ranges possible.
The VHF-high is the easiest-NOAA
For other ranges, paging or digital signals can be a good source of continuous
signals for tests.

1458. Help identify amp/transistor

I know I am crossposting, but am hoping that someone in some group can answer my questions.

I picked up a small linear this past weekend with intent to use it VHF high band. I have no clue if that was its true intention, so I am asking:

1) What frequencies might this cover?

2) What would be the power output?

Here are the details: VHF Engineering, Model PA4010H, Serial: 165X

Transistor inside: Motorola pill 2N6084

1459. Loft mounted antenna - effect of water tank ?

Newsgroup: rec.radio.scanner
Date: 2002-04-03 11:02:55 UTC
From: Nobby Nohope <Nobby@Nohope.com>
Message-ID: <epnlausvkobe12pfvlm70u3q5pfkiq7e40@4ax.com>
Source record: 49975

Quite new to the scanning scene, so this may be a dumb question. I have just put a discone antenna in the loft. The easiest place to put this happened to be sitting on top of the cover on my cold water tank. The discone has made a huge difference to the reception on my AOR8200, but I was wondering if the large body of water sitting underneath the antenna could have a detrimental effect on reception?

Also, another dumb question regarding earthing of antennas. Is advisable to do this with an internal mounted antenna ? If so where is the best place to take this from (cold water pipe or electrical mains earth). Should the antenna cable be earthed at the antenna end or the radio end ? Is this still appropriate with a handheld scanner ?

Hope someone can enlighten me on the above points.

Regards

Nobby

I agree with Marc. Also, most electrical tape adhesives tend to get gooey after awhile, which might gunk up your antenna. Most of the solvents to clean off the goo will probably hurt the rubber on the antenna.

I've read old posts by the late Bill Cheek about a CE-232 interface he created for this purpose, but it appears that was for a couple of specific RS base models. At least as far as I can tell.

Is it possible to do with handhelds, and is there anything speical required to achieve this (like another interface or something)? I haven't been able to find out, and wondered if there were any boards or sites (or threads) about getting it set up.

Thanks for any help you can offer.

James

P.S. Please reply here, as I've gotten too much spam in the past.

Hello all,
I need some information regarding carrier recovery at 1.5GHz. What I am trying to do is to demodulate BPSK signal at 1.5GHz. The recovery of the signal is complicated by the fact that such high frequencies the phases of the local oscillator at the transmitting end is far from ideal and hence demodulation is rather difficult. Does anyone have any suggestions/ideas/solution for this problem. Thanx in advance.

Vikrant

Date: 2002-04-03 14:33:17 UTC
From: Walt Bertram <wbertram@optonline.net>
Message-ID: <3CAB12AC.6058F948@optonline.net>
Source record: 49981

Yes. It requires two radios and a computer. One, which monitors the
Control Channels, must have a Discriminator output. The other, which is
tuned to the active voice frequencies by the computer, must be computer
controllable. A simple "data slicer" interface is required, plus the
two programs Trunker (for MOT systems) or ETrunker (for EDACS systems).
Except for the fact that it requires two radios and a computer, this
method of trunk tracking works better than, and is more versatile than,
any of the trunk tracker radios.

Details can be found at http://www.trunkedradio.net/

Click on the Trunker/Etrunker icon.

For small systems, you can also just put the frequencies into a
conventional scanner. Lock out the active control channnel. You will
hear the voice channels as they become active, but they will not be
"tracked" if more than one talk group is active.

When I was in the Military we had a saying - "You trim you win".
Half the battle when demodulating any BPSK signal is to decapsulate any
remaining strong-field signal before interspersion. This having been said,
once the distance has had it's carrier amplitude modulated, a BPSK signal
above the SK density ratio will occupy greater bandwidth. My supervisor
once proved this to me by slamming me in the head with a metal mop bucket
over and over till I passed out. Then we played "Hello broom handle".I was
made to clean up the whole mess before I went to sick bay. So I don't think
demodulating BPSK signal at 1.5GHz.is going to be easy.

A ground plane under the discone should not hurt and might even help. I
wouldn't ground it, the insulation of the air and the roof will protect you
from any lightning strike that wasn't already destined to hit the water tank.

Actually, the "cone" part of the discone isolates it from the structure
it's mounted on, so the water tank shouldn't have any undesirable
effects. As for grounding an indoor antenna, it shouldn't be necessary.

I recently bought a new scanner and I'm gathering info and freqs. Do any fellow listeners out there know of any web sites listing St. Louis City fire equipment. I found a site that lists St. Louis COUNTY equipment and there station assignments, but haven't been able to locate a list for St. Louis CITY.

Thanks, Stan

The tape won't hurt, but the wire from the earpiece probably will.
Find another way to get the wire out of your way.

An old ad for them lists it as a 2 meter amp that takes 10 watts in and puts out 40 watts. That is about right for the transistor that is used. If you drive it with less power , expect to get about 6 db of gain from the amp.

BTW, this amp is not really a linear for use on SSB but is operating class C and works fine for CW or FM.

Dear Friends:
I am new to scanning and just bought a used Bearcat 245XLT from a friend. Are there any good web sites that have freeware or demo ware for programming frequencies or other modification programs? Are there any good sites to look up frequences for scanning? I live in the Mpls St. Paul area of Minnesota. Any help would be GREATLY APPRECIATED!!

Thanks to all in advance.
Greg

1479. Re: Loft mounted antenna - effect of water tank ?

Newsgroup: rec.radio.scanner

Source record: 49995

Don't just sit it on the water tank if the tank is a conductor. If you mount a foot or so above the tank then you should be ok.

The antenna does not need a ground to work. For the discone antennas the ground is for lightning protection. As you have the antenna inside, if lightning does hit, it has already done its damage.

Most antennas for frequencies about 30 mhz or so are made so they do not to be 'earthed' to work. Doing so will not help with the exception that a foot or two of wire handing off the receiver may act as part of th eantenna and may help. This makes up for the 'missing half' of the antenna of the internal mounted antenna.

1481. DJ-X3 Etc Programming Cable

Newsgroup: rec.radio.scanner
Date: 2002-04-04 03:35:40 UTC
From: Pete Ritter <cpritter@attbi.com>
Message-ID: <gSPq8.219691$q2.19266@sccrnsc01>
Source record: 49847
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Lately there have been a few inquiries on these groups asking for a schematic for a programming cable for the DJ-X3 and other radios. These radios require a "level shifter" circuit to change the PC's RS232 voltages to the radio's TTL voltages and vice versa. I believe the specification is called "CI-V". A few people have posted ciruits. I decided to build one and am happy to report that it works and I can program my DJ-X3 with it. The circuit I built is found at this link:

http://www.qsl.net/nr6z/images/max233_interface2.gif

This ciruit derives its power from the the PC's DTR and RTS lines. Some PCs may not be to supply enough current to power the circuit and nr6z has supplied a self powered version here (well, it requires an external source of DC):

http://www.qsl.net/nr6z/images/max233_interface1.gif

I built mine "ugly" style on a piece of perf board. I used tie wraps to anchor the two cables to the board. I covered the wired board with a couple of layers of electrical tape. I believe it could be built inside the shell of a DB9 or DB25 connector.

The MAX233 cost me $4.95 from a local electronics store and the other components came from the junk box. One of the mail order houses wanted $35 or $40 plus shipping for the Alinco cable. Mine solution isn't very pretty but it works and it's cheap.

Thanks to NR6Z.

Though RS made some good rigs over the years, they just don't hold a reputation among collectors or users. Same way with their old SW receivers and (with a somewhat irrational exception for the 2004-5-6 series) - scanners. Identical Bearcat models that were sold under the RS brand can bring 30-70% more as Bearcats.

RS is not going to stop selling small parts. they have discontinued several that were being used primarily for illegal purposes, what, I do not know. The part was a Quad Line Receiver (1488). But, for you guys that are serious, find a franchise store instead of a company store and they will usually cut you a deal.

Bruce, you just got hooked by a troll. "Emilio" is a canadian troll
and script kiddy who got convicted of some hacking a couple years
back. I don't recall his real name but he uses that alias all over
the place. Just plonk it and ignore it. Maybe if we're lucky he
can get to be bubba's girl again.

1504. Re: Does the BC 780 XLT use the same Power supply as the 9000 XLT?

Radio Shack seems to be removing slow moving items from the shelves even though these items are a high profit sale.

You can still buy whatever you want from RS. You just need to get hold of their commercial accounts catalog in which you'll find all the parts you've ever seen elsewhere. It's a separate catalog that you need to ask for. They may not even have one in stock but it can be had for the asking.

1518. Re: Anyone listening to SCA stuff?

Newsgroup: rec.radio.scanner
Date: 2002-04-05 11:47:24 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3CAD8ECC.99F16E75@mitre.org>
Source record: 49884

This may be off topic but I just tried the FM carrier87 Mhz to 108 Mhz on the Cable TV system. It had many repeats of the NOAA weather forecast in digital voice. There were may full carriers that pegged
the LED s-meter on a Uniden CR 2021 AM/FM /SW receiver but NO AUDIO present. Several NPR stations on frequencies up the band from their normal 88 Mhz-91 Mhz area.
Ten years ago the stereo audio for many of the music channels and premium movie channels were on the FM band.with the cable feed. They all seem to be gone now. Of course the cable system has change owners several times over the years.
Jim

Hi,
Is there any serious software / hardware work available for descrambling
transmissions ?
Scrambling method is rolling one (not ordinary inverting, so common known
soft decramblers available on the Net are useless).

jank

I have the following VHS tapes for barter. They are the original unedited master prints from the Columbia House libraries. I'd like to trade them for a good base CB unit, handheld scanner, or transceiver of any kind.

The playback qualities of these tapes are superb and they're all in perfect condition. They each come with hard shell cases and a retail price of $23.89 which you can verify for yourself by calling Columbia House.

I'm not expecting a dollar-for-dollar exchange and I'll consider anything you've got, but please make certain it's for something you'd be willing to trade for yourself. I'll gladly ship the tapes 2nd-Day air to your location, but not for junk or stolen property!

If interested, write directly, and Thanks!

Columbo episodes:

Etude In Black
An Exercise In Fatality
Mind Over Mayhem
Negative Reaction
Blueprint For Murder
By Dawn's Early Light
Dagger Of The Mind
A Friend In Deed
Prescription: Murder

Star Trek episodes (2 on each tape):

Arena
The Alternative Factor
Tomorrow Is Yesterday
The City On The Edge Of Forever
The Naked Time
Balance Of Terror
What Are Little Girls Made Of?
Miri
A Taste Of Armageddon
The Devil In The Dark
A Piece Of The Action
By Any Other Name

Radio Shack will continue to sell Diodes, Resistor's ect, they are in the process of remodeling all stores. To save space, all small parts are being sent back to Ft. Worth to be repackaged and will be sent back to the stores in a drawer type setup. Many new changes will be made during the year 2002 and this is one of them, currently they are doing away with car audio.

Dave

I hate to tell you this, but that would be quite illegal. The scanner
laws are quite clear in Canada. You may listen to *ANY* frequency
(yes including cellular and cordless phones), but to repeat, broadcast
or rebroadcast what you hear is a big nono.

This Might be one of the dumbest Ideas I've come up with, but I'm a newbie, and come up with crazy Ideas, it's my job. I'm in a situation where I can't mount an outdoor antenna therefore I'm stuck with very limited range for scanning. I was thinking if it would be possible to pickup a BNC connector from radioshack and hook a split off my cable line, hence giving me TONS of antenna. How well are cable lines sheilded against scanner feqs. If this isn't a viable option, what other ideas do you guys have for improving reception without mounting an outdoor antenna.

Using your cable doesn't work very well, I've tried it. My suggestion, and this is what I'm using for my apt. is the radio shack, cellular lookalike scanner antenna from Radio Shack. Very cheap, nice coverage, and very easy to install on the side of your window. Besides what's wrong with putting a magnet mount antenna outside the window.

It takes a lot to get me wound up, but today I received FIVE emails from the same guy telling me how disappointed he was in my "free" software because it required a password and to obtain that password he had to email me. He made his feelings very clear by saying that I was lame and a lousy programmer.

AND ALL BECAUSE HE DIDN'T LIKE THE IDEA OF HAVING TO ENTER A PASSWORD!!!

I spent a long time getting this SWL Logging Database right and placed it in the Public Domain for the benefit of all the SWL/HAM Community. To get an idea of how many people were downloading and using the software, I put a password on the zipfile and a comment asking people to email me for the password - just like registering free software, really. Not much to ask I thought.

Well apparently, it was too much for this particular guy! He ranted and raved, so I replied to him and told him the password was "kissmyass" without the quotation marks! What a tosser!! I find it hard to believe that there are people like this in the radio community. No doubt he's an arrogant, spoiled, petulent little boy who slams doors when he doesn't get his own way. His alias was "bridge2nowhr" FYI.

Anyway, for anyone who is interested in a FREE SWL/HAM Logging Database and would like to know more, please feel free to read thru the info at :

http://www.tom.mcq.btinternet.co.uk/ar3000/mcqlog.htm

But for God's sake, don't complain about having to email for the password :-)))

Regards, Tom.

I had someone email me one time criticizing my website. He said that it was incomplete and I should have shown research data, test results, response curves, ect. I responded by explaining to him that is was intended for the mainstream radio enthusiast, not the engineering crowd and technical details such as he was asking for were beyond the scope of the site. He wrote back saying that I was just to lazy to do it right and if I did not want to do it right, I should remove the website.
You can't please everybody. You just have to keep in mind that for every one of these types, there are a hundred that appreciate what you are doing. I have taken a look at your software and it is quite well done. Sending for a simple password is not to much to ask. You offer something for free and there are people out there that act like they are doing you a favor by taking it. Fortunately, those people are few and far between.

R/shack has a "universal" bracket set I saw just yesterday, looks like you could use it to mount several of ANYTHING! Their part number is #270-023, for $3.99 Online at:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F002%5F001%5F019%5F005&product%5Fid=27%2D023 or, use this "shortlink': http://makeashorterlink.com/?Q113233A

They also have #270-011 for the same price, http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F002%5F001%5F019%5F005&product%5Fid=27%2D011 - though the one in the catalog looks different from the website.

I'd go to a store and look at both... may be in the Auto/Audio Installation stuff area.

Yeah, I know what you mean about people criticising websites. I've had that too. One of my favourite places for a laugh is Harry's Homebrew FAQ Page. Harry designs radio-related electronic projects and shares them with the visitor's to his website. Apparently, some people think that Harry is there to design free projects on demand and get really upset when he refuses. There are some incredible and hilarious stories on there. Well worth a look......

http://pmp3.net/harry/info/fasq.htm
You'll laugh your head off :-)))

It works both ways. I once emailed the designer of a website, suggesting nicely that he use a spell checker. His reply simply told me to get my head out of my ass. I don't bother making what I think are helpful suggestions anymore.

I've been to Harry's site and read those letters. There are some clueless
people around.

Hi Tom...
Just want to say that I appreciate all the great work you have done. This guy is the same as those type that are always posting messages asking for keys for perfectly good software that someone has worked their b*lls off to produce (not saying you haven't because the hard work you've put in is there for all to see).

I therefore wouldn't take it personally... there is always an a**hole no matter where your interests lie. I hope that you will continue to develop other projects that you may have in the pipeline and you don't let this guy get to you.

Yup, actually, I had it on the window at first then took it off, and am now left with no tape on it, so I jimmy rigged it and it's all together now, and working excellent.

I taped the base of it together with the antenna part. now it's just sittin
on the window cill.

hmmmmm, unless you want to leave one window slightly open about an inch or
two.

well, then stick it together, so it looks as if it has a base, stick it out the window, standing straight up of course, or if you must, with a bit of a slant on it away from the window, and and leave the window as wide as the coax cable is. That's pretty much the same set up as myself.

In article <m8vkaucl2olh68h2nd1tdcu1blq1p6f2gu@4ax.com>, Ann.Curry@nbc.com says...
: ---
:
: Portland
:
: Suspicious man attempts to lure young girl into car
:
: Police have released a composite of a suspicious man who allegedly
: attempted to lure a young girl into his car earlier this month.
:
: On several occasions earlier this March, a suspicious man parked across the
: street from a school bus stop at southwest Alexander and southwest Alicia
: Streets in Aloha tried to lure a 10 year-old girl into his car.
:
: He told the girl, "I know your Mom, it's O.K. to get in my car."
:
: The suspicious man is described as Hispanic, in his late 20's to early 30's
: with a mustache and bushy eyebrows. The girl also said he was wearing a
: white baseball cap.
:
: The vehicle he was driving is described as a red early to mid 90's Toyota
: with a narrow black stripe running along the mid-section of the car from
: front to back. Detectives say the narrow stripe is possibly rubber door
: trim.
:
: Similar reports of a suspicious Hispanic man sitting in a red car near
: schools or playgrounds have been reported in the last few weeks in North
: Plains and Hillsboro.
:
: http://www.katu.com/news/story.asp?ID=43583
:
:
: March 24, 2002
:
: New roadside memorial goes up for slain Tahoe girl
:
: CARSON CITY, Nev. (AP) - After repeated vandalism, a new roadside memorial
: has been installed for a young Lake Tahoe murder victim.
:
: With the help of a crane, a 1-ton metal cross went up Saturday near the
: spot where the body of 9-year-old Krystal Steadman was found two years ago.
: The cross features a heart with Krystal's initials. Toys also were left in

: her memory.
:
: Three previous memorials at the site along U.S. Highway 50 west of Carson
: City were desecrated.
:
: "This memorial is made of solid steel and concrete, and I'm confident it'll
: survive," said project organizer Gary James.
:
: "Krystal had such a short time to enjoy life, but had to endure such pain
: and misery ... To me, the memorial is not only for her but for all children
: that have suffered untimely deaths."
:
: James is a friend of Krystal's father, John Steadman of Gatlinburg, Tenn.
:
: Krystal was killed at Lake Tahoe in March 2000. The man charged with her
: murder, Thomas Soria Sr., committed suicide in the Douglas County jail in
: January 2001.
:
: The first memorial to the girl disappeared in October 2000. The second was
: vandalized a month later.
:
: Earlier this month, vandals damaged a cross made of wood and train rails
: with a chainsaw, and tossed toys into a nearby canyon.
:
: Stormy Stone, 9, of Carson City, was among about 30 people who watched as
: the new memorial was installed. She left some of her favorite toys.
:
: "I wanted to come to support the family," she said. "This memorial is
: special to us."
:
: Krystal, a fourth-grader from South Lake Tahoe, Calif., disappeared after
: Thomas Soria Jr. lured her to the apartment he shared with his father in
: Stateline, where her mother was visiting friends.
:
: The child's nude, battered body was found the following day along Highway
: 50 about 20 miles away. Authorities said she was raped and tortured before
: her throat was slashed.
:
: Soria Jr. is serving a no-parole life term for his role in the crime.
:
: http://www.lasvegassun.com/sunbin/stories/archives/2002/mar/24/032410381.html?%22slain%2BTahoe%2Bgirl%22

Another American killed by terrorists, this time a child by the La Raza terrorists who Bush gives amnesty to so they can continue to come here by the tens of thousands and then breed like cockroaches and cleanse Whites from the continent.

If you read "The Color of Crime" (http://www.amren.com) you will discover that the "Justice" Department in Washington D.C. classifies all Mexicans (mestizos) and Puerto Ricans (a lot of black blood) as "White". All of their sex offenses, all of their "Hate Crimes" are blamed on real White people.

The media casts all sex offenders (particularly child molesters) as White by broadcasting their pictures and publishing them repeatedly in their "news"papers, while hiding from public view the much larger number of spic mongrels and niggers who commit far more offenses of a deviant nature, most notably "Hate Crimes" in which White people are usually the *victim* of a nigger or spic mongrel offender.

Naturally niggers are never charged with committing a "hate Crime" against Whites and a "Hispanic" can't be charged with committing a "Hate Crime" against a White person because these mud colored animals are classified as White.

Model 3-5875A
SSB radio in great shape.Has the two antenna inputs on back.
It comes with the hand mike and I have a Turner Expander 500 desk mike.I
just got to remember where I put the desk mike.The radio is in real good
shape and works great.I just don't use it so I want it out of my way as it
takes up to much desk space for me. I will give you a personal guarrentee on
it.Let me know what you
decide.Thanks Email me.
I am interested in a triband mobile with 6 meters on it also
Make me a reasonable offer on it as I want to move it to a good home.I have
had several people interested,but no solid deal on it yet.

hi Tom!

> He made his feelings very clear by saying that I was lame and a lousy programmer.

don't worry about that, i have made many programs for others and trust me you cannot please everyone... i like your password of "kissmyass" LOL.

i know how i would have handled this guy: what you do is be very nice and polite and send him a password that he's not sure is an insult... one like 'uRAto553r'. then you send him a 'special' version of your software that has a 15 minute delay splash screen that reads 'who's the lousy programmer NOW bitch!' :D

you can also build this into your program generically by having all passwords starting with 'uRA' put up a similar splash screen (or worse ;)). i always make sure to put in some good easter eggs for all the nice folk too :p.

phil :)

Had one of these "in the day". It was absolutely the finest rig I had
ever used, and I've used my share. The DSP worked like a charm - really
cleaned up the audio. Not too big either - smaller than the Cobra 2000.
Closer to the Uniden/President Washington in size. Closer to the 2000 or
a good Saturn in performance.

1573. Hand Held Scanner Recommendation

Newsgroup: rec.radio.scanner
Date: 2002-04-06 03:18:46 UTC
From: JohnL <xyz@hotmail.com>
Message-ID: <MPG.1718332351fb3538989688@news.cis.dfn.de>
Source record: 49939

Hi folks,

I recently sold my PRO-51 and I'm getting rid of at least one of my PRO-2006's. I'd really like to get a good trunk tracking hand held. However, I haven't really kept up with technology in the scanning market. I've been thinking about getting something besides a RS model, but the only rigs that have caught my eye ARE RS models - the 92, 93, and 94 to be exact. I've checked over at Stong Signals, but wanted to get some more input about these.

Which is the most flexible relative to what it can receive? What is the difference between dual and multi trunking? Anyone in NJ have any of these rigs and know which work or don't work for listening to the NJ State Police? Any other recommendataions?

Thanks in advance!

>
> thanks

Probably not. Most scanners don't receive specific portions of the band because they do not have the circuitry necessary to receive those portions. You could try to find a rig that does receive those freqs. The PRO-2004/2005/2006/2035/2043 and PRO-26 all do, IIRC.

Hey Tom, I have no problem believing that guy.

Bravo on your work! And thanks very much indeed for some fine FREE software.

As far as the criticism.....Well, you'll find jealousy and lack of
respect
for hard work certainly more often than should be expected. I just shake my
head and move on .
On the other hand, there are plenty of fine individuals that give credit ,
respect
and support when due, and judging by the responses to the post they
surely outnumber the Knobs. And that would be a good thing in my humble
estimation

P.S I enjoyed your website and information presented!!!

Keep on trucking

D.J

I don't know anything about the rs ones....but many people have enjoyed the uniden bearcats...i think the model is the 245xlt that does trunking in a nice hand held (a bit big, but makes the buttons usable). its a kindof olderish model so likely lots of people here have had some real exp with it....

Message-ID: <90c32b9d.0204052113.29e65745@posting.google.com>
Source record: 49945

Both are complete and in excellent condition. The Yaesu, I may have the box and manual for but the 64 is just the scanner and antenna. I have the antenna, battery and charger for the Yaesu but I will have to hunt for the box. If you need specifics on the radios check the manufactures websites or call me on the phone. I want $100 for the 64 and $150 for the Yaesu and I'll pay the shipping.

If I (hypothetically, of course) wanted to exponentially increase the range on my handheld scanner in the 903MHz area, what's the premier BNC antenna?

Cost is not a factor, but being limited to ONLY the 900MHz range is. I need to still be able to receive every frequency that the scanner provides.

Thank you.

An antenna specifically designed for that band,; look at what Larsen has
to offer at
http://www.larsenantennas.com/products/portable/800-900tcd.html

buy a antenna for that specific set of frequencies. You will never go wrong
if you buy a antenna specifically for the frequency range you want.

Ahh so is this why I used to hear MTV Audio on 97.7 MHz on my stereo? My cable wires were right next to the stereo.. The only difference is if the local cable company ran 1 of those localised commercials over the commercials MTV would be playing, I would still be able to hear the MTV commercial on the stereo...

thanks for the post :)

Tom...that's what its all about nowadays...negativity! I sure don't get it either. Hey...have you ever been out and about in your local community, and bumped into someone you haven't seen in years.....AND the first thing they mention, is something negative, or bad? "Hey...I heard this about you"!!! Well...that's it....same thing! Just ignore the person!

Emergency Situation Report e-mail list for Pennsylvanians

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
and manhunts.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.

Message volume on PA-SitRep is EXTREMELY
low and users may subscribe and unsubscribe
at any time.

PA-SitRep is also building a list of PA-SitRep
Contacts, many of whom are Amateur Radio
Operators with HF capabilities. Contacts monitor
our higher volume SitRep/Discussion list and
have unrestricted posting privilages to the
main Situation Report list which is moderated.

Please visit the site to learn more:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. We'll look forward to your participation.

-David Kleber, KB3FXI
PA-SitRep List Owner and PA-SitRep.com Founder

You *ucking guys are a bunch of *##hole on these news groups.Always cutting
someone up instead of trying to tell them that the price may be to high or
try to help them out.You are the one that buy it for a dollar and sell it
for 50.00.So rather than critisize someone,why don't you try to encourage
them and try to give them an idea of a going price.Is that hard to do??
Go on Ebay and you pay tripple the prices.No wonder why you see more FA on
here than FS.
So if all you want to do is jump down someones throat and make yourselfs
look like idiots,don't even make a response to me unless you want to help or
buy.
I also buy a lot of these groups and I don't ask for much.I try to get what
I got in the item.Some of you out there have sold and bought from me and
have had good deals.
Again, keep your yap shut or try to help out rather than bitch.

Source record: 49810

Once you have a halfway decent antenna, the only way to increase the range at 900MHz is to raise the antenna height. 900MHz is strictly "line-of-site".

Get an antenna which covers the frequencies you desire, and put it up on the highest mast you can afford. Of course, coax cable can be very lossy at 900MHz, so be sure to get the lowest loss coax available. And, since even the lowest loss cable is still pretty lossy, you may want to consider putting a high quality preamp at the masthead.

You can calulate the approximate range from the following formula:

Range(miles) = (2*Height Rcvr Ant)^0.5 + (2*Height Trans Ant)^0.5

Walt

Thanks John. I think I found the one I want. I'm going to hold out for the BC250D. Maybe I'll replace my other 2005/2006's with a BC785D at the same time. Now I just have to wait for Uniden to release them.

In responding to such drivel, it's helpful to exclude the original posting. In that way when Google kill files the user the posting, in effect, dies after a few days. By including the original posting in any response it sadly lives on.

Giz,
You sent me an email but replies keep bouncing back to me so I can't answer your question by email.

In case you read this message though, McQ_Log will give an error message of "Unreconized Database Format" if you are running Office/Access 97.

There is no way around this from what I can see (other than to get Access2000).

Regards, Tom.

Get a Pro 93 for now because they're here and they're cheap if they
are on sale. You can get a 250 and 785 IF or WHEN they ever come out.
Be advised that I was on a list for a 780 for about 2 years until they
came out. Get one that you can use now. I've learned my lesson.

If the glass-mount doesn't work, try the Radio Shack telescoping anenna. It attaches straight to your scanner. It's about ten bucks, and works quite a bit better than the rubber duckie.

I downloaded the program and used Kissmyass as the password both upper and lower case. It still does not work. Is this a bogus program or is the password based on timezone.

I'm getting sick of this because I am way behind logging my radio info.

1607. Reception questions

Hi all,
I performed an experiment with a 900MHz analog cordless phone that I had sitting around my house, with interesting (to me, anyway) results.

I left my buddy inside the house, and had him call another friend of ours. I wasn't sure what frequency my phone was on, so I set the range from 902-908. It settled in on a frequency in the mid 903's. Two things surprised me a bit:

1) I walked exactly 100' feet in front of my house (with my handheld scanner that has the original cheap rubber duckie antenna), and heard the call perfectly. Then I walked exactly 100' to either SIDE of my house, and again heard everything clear as a bell. But when I walked 100' behind my house, the scanner lost the frequency. If you get a minimum range of 100' in three different directions, I was under the impression that it would hold true for the fourth direction, as well. FWIW, by the time I walked 100' to the rear of my house, I was in the woods. I could understand not getting the signal in the summer with all the trees in bloom, but these trees are bare. But still, I'm assuming that the woods interfered with the transmission somehow, anyway. Would this be a correct assumption?

2) Even though my phone was on a 903 (i.e. base) frequency, I only heard one end of the conversation. I only heard my buddy who was nearby in my house. My other friend to whom he was speaking lives a couple of towns away, and I could not make out a single word he said during the whole conversation. It was to the point that I could barely tell that someone was on the other end. His voice came across very, very softly. What could be the reason for this?

Thanks in advance!

Greg

Atleast this guy is trying to cover up by talkin about the supid cell phone listening. Just so it don't spark a flame in the group. You guys in the states have shitty scanner laws I'm sorry, even in Canada I don't think they're this bad. You have lowered yourself to the gov't. You have to talk about something that is totally available to the general public, but yet you have to be so secretive about it.

It's a great day to be a Canadian. :)

to begin with,
you are posting in a group that is inappropriate for this
(rec.radio.cb).

secondly, that particular radio is nearly 10 years old (as the line was
discontinued in 1992) and I have several here that I paid less than
$150.00 each for them (including accessories).

you are asking a bit much.

Source record: 49832

>I bet it's expensive. It's the best scanner bracket ever made, you know!

The bracket that was made for the 2006 ran almost $30 new.

It was custom made for the dimensions of the 2006, with foam padding in the corners to prevent scratching and freeplay.

The assembly consisted of a mounting bracket, and two brackets that hung from the mounting bracket and held the 2006 in place. Two knurled knobs held the radio brackets to the mounting bracket, and allowed the scanner to pivot up and down.

The upper and lower brackets around the scanner hooked on one side, and used a fold-over latch on the other side. They were sturdy-enough to mount / hang a second scanner off the lower bracket.

Hello. I am looking for Ranger AR-3300 or AR-3500 10 meter radios. 30 watt or 100 watt models, black or grey. I would prefer working units, but will take non working units. Cosmetics negotiable. These are older 10 meter radios made by Clear Channel, not RCI models that are now made by Ranger Com.If you have any of these and would like to sell it for a reasonable price, please Email me direct. Again, reasonable prices only, these units are over 10 years old. I have cash or used commercial radio equipment if you want to trade. Thank you in advance!

Try taking it to Radio Shack they may be able to send it out for repair.
If it's a ANALOGUE only cell phone no one
is going to give you much service. Is the telephone number and account
associated with this phone still active
are you paying the bill on the phone? This may give you some leverage
when trying to get it repaired. A price analysis of the repair job
verses a new Digital PCS cell phone/account may give you a better idea
of which deal is better and will work
Jim.

Sorry if it sounded like I was criticizing Technomage. It was not
intended. I was merely pointing out that N1RSP would have gotten a
warm reception from the illegal CBers in the NG if he had a HF amp for
sale - rather than a VHF rig :)

-Aaron-

Also Bonehead, it's a dual band HT. I'll leave it to you figure which 2
bands...although my 14 year old knows already.

>Vikrant

1.5GHz isn't that high, really. If the oscillator isn't some extremely cheap piece of crap, it shouldn't be that tough to demodulate BPSK from 1.5GHz. A Costas loop can still do the job of carrier recovery for BPSK. What is the symbol rate of the desired signal? The lower the symbol rate the harder the problem will be, but I would think that with a reasonable oscillator anything above about 32kbaud should be doable without too much trouble. Obviously, YMMV.

If, however, as you've hinted, the oscillator _is_ an extremely cheap piece of crap, there are a few options. Raising the symbol rate helps, since then the Costas loop bandwidth can be increased to span the bandwidth of the phase noise. If that's not possible, switching to differential detection or differentially coherent detection may help, although there are performance penalties associated with both (which may be preferrable to not being able to lock at all).

Hope that helps a little.

Cheers,

* * THE ULTIMATE CELLULAR MODIFICATION MANUAL * * released by * * %%%%%%%%
Dr. Bloodmoney %%%%%%%%%% * * June 1, 1992 *
*****************************************************************************
* The following information was gathered from various sources and is not
meant to be a technical treatise on the cellular network. There are plenty
of other files out there on the subject. This file specifically deals with
the processes involved in modifying cellulars. I put together this file
because I have not seen one that actually tells how to do this. When some of
you start reading this you might say to yourselves "Hey, some of this is
almost word for word from Brian Oblivion's article (incidently, one of the
best I have seen on the subject) in Phrack #38 or so and so's article in so
and so magazine". Well, not to discount anyone who has written anything on
cellular phones, but all the information in this file was purchased by me
from various ads in the back of various radio and communications magazines.
I make no pretense as to where the original source of this material comes
from. In fact, most of the t-files I have seen contain some of the
Consumertronics info. word for word, and the writers try and claim it as
their own. Or maybe vice versa. I make no claim to have written this manual
(but beleive me after putting this together I could). The only thing I have
done is spent many hours compiling what I believe to be a very good file on
the subject.

* Comments can be left to me at RIPCO (bloodmoney),Blitzkrieg,or Lucid
Dreams PART I. WHAT IS BROADCAST FROM A CELLULAR TOWER? When a cellular
phone makes a call, it normally transmits it's Electronic Security
Number(ESN),Mobile Identification Number(MIN),it's Station Class Mark(SCM)
and the number called in a short burst of data. This burst is the short buzz
you hear after you press the SEND button and before the tower catches the
data. These four things are the components the cellular provider uses to
ensure that the phone is programmed to be billed and that it also has the
identity of both the customer and the phone. There are usually two cellular
```

phone companies in an area. One is the wire-line carrier (Band B), which is usually Bell, and the other is the non-wireline carrier (Band A). Within the two bands are 832 cellular phone channels. Each one has 416 bands, and within the bands are voice channels that actually transmit and receive information from cellular phones. The ESN and the phone number (MIN) are the two primary identifiers for any cellular phone. By changing both, the cellular carrier will accept the call and bill it to either a wrong account or provide service based on the fact that it is NOT a disconnected receiver. It will also look at the other two components, in order to insure that it is actually a cellular phone and to forward billing information to that carrier. The Station Class Mark can also be changed if you wish to prevent the cellular carrier from determining the type of phone that is placing the call. By providing the cellular tower with a false SCM, the cellular carrier, the FCC, or whoever happens to chase down cellular fraud is often looking for a particular phone which in reality is not the phone they are looking for. For example, you can provide the SCM for a Radio Shack phone, when in reality you are using a Novatell (How this is done from changing the SCM I do not know...remember...I didn't write this). The Number Assignment Module (NAM) also has the SIDH (System Identification for Home System) number programmed into it. Refer to SIDH TABLE. The transmittal of the SIDH number tells the carrier where to forward the billing information to in case the user is "roaming". The SIDH table tells the major cities and their identifying numbers. Changing an SIDH is programming job that takes only minutes, but be aware that the ESN is still sent to the cellular phone company. After they realize that the ESN is connected to either a fake number or a phone that is not in the network, they will block service. They only way around this is to reprogram the ESN.

****

* PART X. A FEW COMMON SCANNER MODIFICATIONS Here a few scanners and what it takes to modify them. If your scanner is not shown here, don't worry. Ham Radio BBS's are all over the country. You should be able to find the instructions for modifying your scanner there. Restoration of Cellular Frequency Coverage on Radio Shack PRO-34 Handheld Scanner 1. Remove battery cover and battery, four black screws on rear cover, and volume and squelch knobs. 2. Remove rear cover, lifting back and up to clear controls. Do not remove belt clip or circuit board screws. 3. Unplug the brown volume control connector (grn/yel/blk) and white squelch control connector (wht/blk/red) from the linear circuit board. 4. Unsolder the ground lead from T111 (at corner of linear circuit board above the external power connectors). Unsolder the two power switch leads from the back of the volume control. Unsolder the antenna connector center pin and ground wires from the l 5. Unscrew the four combination screws that hold the linear circuit board and received the back cover screws. Grasp the linear board at the top and lift it straight away from the front case, unplugging the 16-pin connector. 6. Remove the three screws holding the metal frame assembly which held the linear board to the front panel. Unplug the red-black power lead and lay the frame aside. It is still connected to the battery contacts. 7. Locate diodes D9 - D12 on the volume control side of the of the logic circuit board under T1; D10 and D11 are marked. Clip one lead of D11, separating the gap. This may be resoldered later if desired. 8. Reassemble the board by reversing the

disassembly procedures above. Restoration of Cellular Frequency Coverage on Radio Shack PRO-2004 Scanner By cutting diode D513 on the PC 3 sub chassis in the Realistic PRO-2004 Scanner you can re-enable the 825.00 to 845.00 and 870-00 to 890.00 frequency selection. To scan in 30KHZ steps press "STEP-RESET". Restoration of Cellular Frequency Coverage on Radio Shack PRO-2005 Scanner 1. Unplug the radio 2. Remove the screws and take off the top cover. 3. Look for D502 on the inside right hand-side of the front panel. (No need to unsolder the silver plate protecting the vertical board!) 4. Simply cut the diode and reverse the process. Aren't you glad I only chose to cover Radio Shack models. I'm sure you appreciate the fact that I only deal with quality merchandise. If you have some cash to blow (like $500), I would recommend buying the ICOM R-1 handheld scanner. It scans from 1 to 1400 in 1/2 step increments and already includes the cellular frequencies. Plus is is about as tall as a box of 3.25 floppies and about as wide as a 16 oz. coke bottle. It is the smallest and one of the more powerful hand-scanners around.
****
* PART XI. THE 40-50 MHZ CELLULAR SCANNER The cellular phone freqs. occupy the UHF spectrum previously assign to commercial TV stations. Since a TV channel occupies a Bandwidth(BW) of 6 MHZ and each cellular channel requires 24 KZ (for a plus and minus 12 KHZ signal) and a 3KHZ guard band for each audio signal (thus the 30KHZ spacing). 200 cellular channels can fit into one UHF TV channel. Thus, with a little fine tuning, and old TV set with variable VHF tuning can tune in all cellular freqs. between 824 and 890 MHZ. UHF TV tuners ares designed to convert these UHF freqa. to intermediate (difference) freqs. between 41 and 47 MHZ. Thus, by purchasing a commonly available UHF tuner (check sith a TV shop and try to get a copy of the SAMS for powering the AFC info, and avoid those with tubes). Tuner voltage is usually 8-24 volts, and must be correctly connected up. You should also remove with the tuner, the TV's channel select and fine tuning controls for ease of use - and they should be in good condition. Once you have the tuner, you can then wire it between a 30-50 MHZ scanner and a UHF antenna (highly directional yagi type is preferred). Since the tuner will probably have a 300 ohm input impedance, a twin antenna cable is preferred (Yes Radio Shack has 'em). If you are into directional-finding, the UHF antenna should NOT have AGC (automatic Gain Control) as those with active AGC will amplify reflections, resulting in readings from so many directions that the target will be lost. Because of the use of inconspicuous, commonly available, inexpensive, high-gain UHF antennas, using a good UHF tuner to scan cellular channels is a good method of doing it. Tuner output is usually through an RCA-type plug. CAUTION: BE SURE TO COUPLE YOUR SCANNER TO THE UHF TUNER WITH A 0.01-0.1 mf (50 V min.) CAPACITOR FOR DC BLOCKING. AND DO NOT TRY TO OPERATE THE TUNER THROUGH ITS TV SET AS THE DANGER OF HIGH-VOLTAGE DISCHARGE IS HIGH. Also, connect a ground wire between the tuner and the scanner. The table below describes how cellular freqs. can be downconverted by a commonly available UHF TV tuner (all freqs. are in MHZ) CELLULAR MOBILE FREQS & SCANNER EQUIVALENTS TV BAND CELL. CHAN. SCAN TV OSCIL CHAN. # and FREQ. FREQ. FREQ. LIMIT ---------- ---------- ----- -------- ----- 73 (first) 0001-825.03 45.97 871 824-830 73 (last) 0166-829.98 41.02 871 824-830 74 (first) 0167-830.01 46.99 877 830-836 74 (last) 0366-835.98 41.02 877

HAVE NOT BEEN ASSIGNED FOR CHANNELS 800-990 80 (first) 0991-869.04 43.96 913 866-872 80 (last) 1023-870.00 43.00 913 866-872 (**) These freqs. are outside of the normal Channel 83 BW. However, most UHF tuners have a fine tuner that can be adjusted up to about another 6 MHZ. Note that the term "first" and "last" refers to the first and last cellular channels receivable by the UHF tuner for the given TV channel. Base voice channels are monitored when both sides of the conversation is required. Mobile voice channels or base control channels are monitored to locate a cellular phone. Tuning is simple: (1) Decide which cellular channel or freq. you wish to monitor. (2) Find what UHF channel includes that freq. and switch the TV to that channel. (3) Using the table, look up the corresponding TV oscillator freq. (ex: 919 MHZ for TV channel 81). Subtract the cellular channel freq. from the TV oscillator freq. (4) Tune your scanner to the difference freq. When you select a scanner, you should pick one that will scan in 30 MHZ increments to efficiently receive cellular transmissions. If you can't get one like that, then get one that will scan in 15,10 or 5 KHZ increments.

****

* PART XII. HOW THE ESN IS REPLACED It takes some electronics skill to pull or unsolder the ESN. If you are sketchy about messing around with your phone, I suggest practicing on something else first, like an old calculator or something. It is also a good idea to use the proper tools (A very small soldering tip,chip pullers, It is imperative NOT to touch any of the surrounding connections, soldering joints, or chips. The job MUST be done right the very first time. After that it is not so important, because after the first time you should have the ESN information stored safely to disk. The only dangers remaining are physically damaging the chip. (Note: There are devices that wipe PROMs clean in the event of programming errors). When removing the ESN, try to follow these 5 steps: A. Remove the PC board containing the ESN from the entire phone unit. The boards are usually screwed in with Phillips heads. This will insure against damage to the rest of the unit. B. Ascertain the correct chip. Find the letters on the chip, and check it against the letters from the IDENTIFYING THE ESN section. Refer to the .Gif file included if necessary. C. It is a good idea to draw a sketch to help you remember which way the chip went in. You may laugh, but do it anyway. D. Carefully remove the chip. Take your time and use the proper tools. E. Solder in a zero insertion force (ZIF) replacement, so that replacement chip can be changed easily. After the ZIF socket has been successfully soldered in, reinsert the ESN and attempt to make a phone call

(Be sure the NAM is programmed correctly). If it doesn't, check the leads on the ZIF to insure that you have soldered them correctly. After that, insert your ESN into your PROM reader and make sure it provides some sort of reading. You should use the search mode to look for the manufacturers serial number. (see MANUFACTURER'S ESN CODE LISTING) to identify the address on the PROM where to reprogram the ESN.
****
* PART XIII. EQUATIONS FOR PROGRAMMING THE CHIPS In most instances, you will not be able to tell the code on a PROM because the manufacturer will have blown the security fuse in order to prevent people from obtaining the codes to reprogram their own chips. Therefore, it might be necessary to produce a set of equations that are programmed into the cip to produce a bogus ESN. The bogus chips must contain the first three digits of the manufacturer's code listing, which is consequently the first marker of the actual ESN. Experimentation might be necessary, but hey, isn't that half the fun? With the aid of an EPROM emulator, the whole process should be able to be completed in under an hour - this includes pulling the chip, creating a new ESN, programming the chip, and replacing it. So know you're saying "Holy Cow this project is getting expensive!". Well it can get that way, but the long run payoff is worth it. I have seen both emulators and burners for under $200 (I'm not talking about those spiffy models that program RAM, just the basic EPROMs...in fact I can buy them for under $150. Same with the emulator. Just look around.) I wouldn't be surprised if actual ESN data started appearing on boards in the near future. I know when I finsish my phone (Hopefully soon) I plan on U/L the ESN info somewhere.
****
PART XIV. MANUFACTURER'S ESN CODE
LISTING ----------
------- MANUFACTURER DECIMAL HEX CODE OCTAL
CODE ----------
---- Alpine Electronics # 150 96 226 Antel (see Emptel,Sanyo) ARA * AT&T Technologies (see notes) 158 9E 236 Astrotel (see OKI) Audiovox-Audiotel (see notes) 138 8A 212 Blaupunkt (R. Johnson # 131 83 203 Emptel Electronics Co. 178 B2 262 Ericsson 143 8F 217 Ericsson GE Mobile 157 9D 235 Fujitsu # 133 85 205 Gateway Telephone 147 93 223 General Electric # (mini is 134)146 92 222 Glenayre (see notes) Goldstar Products Co. # 141 8D 215 Harris # 137 89 211 Hitachi # 132 84 204 Hughes Network Systems 164 A4 244 Hyundai 160 A0 240 Japan Radio Co. 152 98 230 Kokusai 139 8B 213 Mansoor Electronics 167 A7 247 Mitsubishi (see notes) 134 86 206 Mobira (Nokia-Kinex) # 156 9C 234 Motorola 130 82 202 Motorola Int'l. 168 A8 250 Murata Machinery LTD. 144 90 220 NEC # 135 87 207 Nokia # 165 A5 245 Novatel 142 8E 216 OKI # 129 81 201 Panasonic (Matsushita) # 136 88 210 Phillips Telecom # 170 AA 252 Phillips Circuit 171 AB 253 Qualcomm, Inc. 159 9F 237 Sanyo 175 AF 257 Satellite Technology 161 A1 241 Samsung Communications 176 B0 258 Shintom West (Audio-Vox BC-20)# 174 AE 256 Sony Corp. 154 9A 232 Sun Moon Star # 178 B2 262 Tama Denki Co. 155 9B 233 Tandy/Mobira # 165 A5 245 TacTel (see notes) Technophone # 162 A2 242 Toshiba 138 8A 212 Uniden Corp. of America # 172 AC 254 Uniden Corp. of

Japan 173 AC 255 Universal Cellular 149 95 225 USA Corp. # (see notes) Walker (JRC, Technophone) 152 98 230 Western Electric # (see notes) Western Union # (see notes) Yupiteru Industries 163 A3 243 NOTES: The hexidecimal ESN is an 11-digit number, first three are manufacturer's decimal code, next two are reserved (but may contain zeros or numbers); remaining six are the decimal serial number. These companies use phones from various manufacturers, code will be of actual manufacturer. Alpine 9510 is Fujitsu 362A - Antel, use GE, Emptel, Sanyo - ARA varies- ATT 1300, 1800 use Mitsubishi - AT&T 1100,1400,1440,1700,1710 use Hitachi - Audiotel 1000,3000,500,BC-40,400,450,550,600 use Toshiba - PC100,200 use Technophone - BC-20,CMT-125 use Shintom - TacTel use Toshiba,Blaupunkt, most are Panasonic, some are Blaupunkt - GE Mini, Gelayre 301 , USA A&B use Mitsubishi - Mitsubishi 460 use Toshiba - Walker Pocketphone use JRC or Technophone - Western Electric use Hitachi - Western Union use E.F. Johnson. # - Chassis number abd ESN correspond to each other. Decimal ESN conversion is required for serial numbers over 1,000,000 or 2,000,000, etc. Simply drop the millions digit and add 262,144 times the millions digit to the remaining number. For example, 01,123,456 = 385,600 or 02,123,46 = 647,744. Then affix the Manufacturers Decimal Code plus two zeros on left to yield 11-digit ESN. The Hex ESN may be found by converting this number to hexidecimal.

* PART XVI. "THE ROAMING SCAM" Some people who are playing with phones that
have been originally registered but have been turned off for non-payment of
bills have used the "Roaming Scam" to place free calls. NOTE: The cellular
carriers will still have records of these calls, and will prosecute those
they eventually catch up to (yeah,right). However, industry standards have
shown that they pursue less than one percent of the fraudulent calls placed.
It is far more economical for them to build software and hardware traps to
prevent unbilled calls from being placed rather than attempt to collect on
the other end which involves greater amounts of personnel and manpower with
smaller actual collections. People have performed the roaming scam by taking
their phones into areas where the SIDH numbers are different from the ones
currently programmed into their phones. Refer to the SIDH listing in this
file for the codes for particular cities. By reprogramming the NAM and
inserting a fake SIDH, the cellular carrier will often accept the phone
call, but on occassion the user will get a message that the phone must have
a local code in order to access the system. As cellular carriers grow larger
in size, this message is less frequently heard. At this point, the cellular
carrier instructs the user to contact them. I don't think so. The cellular
service has the best chance of of catching a spoofer who either calls a
friend continually at home or by developing traceable trends such as calling
the same number from within the same cell at the same time every day. Or
doing something stupid like ordering a Pizza. "But I want to hook up the
phone to an acoustic coupler, d00d, and call all the k-rad out-state-boards
for the latest PyRut WaR3z!4@$$!$@!@" <-lamer. Well, one of the properties
of cellular phone systems is that the transmitter freqs. may be changed or
"hopped" in the constant effort to allocate freqs. Because of freq. hopping
it is very difficult to triangulate a cellular phone using standard
directional finding methods (trace you, d00d). Further, it is known that a
directional antenna randomly aimed at cellsite repeaters will confuse
directional finding equipment being used by them that is synced to their
freq. hopping scheme.

DEFINITIONS The following is a list of commonly used abbreviations used in cellular phones. SIDH A 15-bit field in the NAM designating the System Identification for the Home System. Bit 0 of the SIDH corresponds to the Preferred System flag used elsewhere in the NAM. Bits 6 and 5 of byte 0 are international code bits. Normally the SIDH is entered during programming of the phone as a 5 digit decimal number. Enter 0's to the left-most unused positions when reprogramming. L.U. Local Use Flag. Tells the cellular phone user if it must preregister with the system. Preregistration with the system means that a mobile must transmit its parameters to the Cellular System as soon as the power-up task and the control channel tasks are completed. "1" enables the flag. Usually set to "1". MIN MARK A 1-bit flag designating that MIN2 (area code) is always sent when making system access. "1" enables the flag. Usually set to "1". MIN2 A 10-bit field representing the area code of the mobile ID number. MIN1 A 24-bit field representing the mobile telephone number. MIN2 plus MIN1 equals MIN, the 10-digit phone number. SCM A 4-bit field designating the Station Class Mark. A (3-Watt) 832 channel mobile unit typically will be 1000, a 1.2 Watt portable 1001 or a 0.6 Watt handheld 1010 or 1110 (discontinuous transmission, meaning push-to-talk). These are class I, Class II and Class III power levels respectively. With the SCM the cellular system determines whether or not a cellular phone can be switched to one of the 156 channels. Bit-1 is "0" for 666 and "1" for 832. (See cellular freq. list) Bit-2 is "0" for a mobile unit and "1" for a voice-activated transmit. Bit-3 and -4 identify the power class of the phone: "00" = 3.0 watts "01" = 1.2 watts "10" = 0.6 watts "11" is not assigned IPCH An 11-bit field designating the initial paging channel to be used if in the home system. Normally it is 334 for wireline systems, 333 for non- wireline systems. But most phones allow other settings for test purposes. ACCOLC A 4-bit field designating the overload class for the cellular phone. The intention of this entry is to allow the Cellular System to be able to determine priority in the event of a system overload, however it is currently useless as the system operators have generally not provided guidance for thier installers. The usual (and correct) system now in effect (in U.S.) is to use a "0" plus the last digit of the phone number. Test phones should be set at "10",emergency vehicles at "11","12" through "15" are reserved. (A class 15 system is supposed to be police, fire, or military). P.S. 1 1-bit flag designating the preferred

system. If PS is "0", channels 334 through 666(EVIL!!!) are used. If PS is "1" then channels 1 through 333 are used. Even numbered system numbers (B systems) require a PS of "0", odd system numbers (A systems) require a "1". GIM A 4-bit field designating the Group Identification Mark. This number tells the Cellular system how far to look in the SIDH to determine if it is roaming in a system which may have a roam agreement with the phone system. It is usually set to "10". LOCK DIGITS A 4-bit field designating the unlock code. The digit "0" in the lock code is represented by an "A" in the actual NAM hexidecimal data. A lock code of all "0" sometimes unlocks the cellular phone.(Note: Lock codes are 3 digits. When programming a phone use "0" as the first number.) E.E. A 1-bit flag designating that end-to-end signaling is enabled. End-to-end signaling means that the DTMF tones will be transmitted on the voice channel as well as being echoed on the handset. This feature in necessary for such services as Bank by Phone, activating answering machines and in third party long distance services such as Sprint and MCI. A "1" enables the flag. Usually set to "1". REP A 1-bit flag designating that repertory memory (speed dialing) in the cellular phone is enabled. And once a again a "1" enables the flag. H.A. A 1-bit flag designating that the horn alert feature in enabled. "1" enables the flag. H.F. A 1-bit flag designating that the handsfree option is enabled. A "1" enables the flag. Often, transceivers supplied as hands-free units require that this flag be left at "0".

****

* PART III. TYPES OF NAMS NAM Types Used in Cellular Phones NAM- Number Assignment Module - A 32 word by 8 bit PROM The NAM contains all the information that can be programmed to the phone directly from the handset. (i.e. SIDH,MIN,LOCK-CODE,etc.). All phones except NEC will accept tri-state NAMs. NEC requires an open collector NAM. Fujitsu phones will accept either open collector or tri- state NAMs. Brand Qualifications: Fujitsu and Alpine phones will not operate properly with any Harris Brand NAM or with any Signetics brand NAMs with a part number NOT ending with an "A". TI NAMs must not be used in GE Star models. Panasonic has suggested only TI NAMs should be used in their phones. NAMs are available in ceramic (F) or plastic encapsulation (N). BRAND OPEN COL. TRI-STATE OPEN COL. TRI-STATE

REP=REPERTORY ---------- HA=HORN ALERT 13 HF=HANDS FREE 14 15 16 SPARE LOCATIONS (13-1D) 17 CONTAIN ALL ZEROS EXCEPT 18 FOR MANUFACTURERS OPTIONS 19 1A 1B 1C 1D NAM CHECKSUM ADJUSTMENT 1E NAM CHECKSUM 1F The Checksum Adjustment and Checksum are calculated automatically after the data has been edited for the NAM. The sum of all words in the NAM plus the last two must equal a number with "0" in the last two digits. The radio checks this sum and if it isn't correct, the radio assumes the NAM is bad or that it has been tampered with. * - These bits are used only by AT&T,Hitachi and Mitsubishi. They are A/B Enable and Roam Inhibit. They must be "0" for all other models. ** - My information does not agree here. One source claims that address 03 has 6 bits and that address 0D has 7 bits. The other source states the the exact opposite.
****
* PART V. STANDARD NAM FORMATS NAMs are generally mapped the same in all cellular phones, and the ones that have no "fancy" options are generally programmed the same. This chart provides the usual digits and settings for almost every NAM. ITEM DESCRIPTION NO. OF DIGITS USUAL SETTING ----------
------ 1 First 3 digits 3 XXX of phone number 2 Last 4 digits 4 XXXX of phone number 3 Lock Code(LOCK) 3 or 4 XXXA or XXXX 4 Area Code (MIN2) 3 XXX 5 Home Area System ID No. (SIDH) 4* XXXX 6 Horn Alert (HA) 1 0 or 1 7 Hands Free (HF) 1 0 or 1 8 End-to-End Signaling 1 1 (EE) 9 Repertory Mark (REP) 1 1 10 Group Identification 2 10 Mark (GIM) 11 Access Overload Class 2 XX* (ACCOLC) 12 Station Class Mark (SCM) 4* XXXX 13 Local Use Mark (LU) 1 1 14 Min Mark (MIN) 1 1 15 Initial Paging Channel 3 333 or 334* (IPCH) 16 Preferred System Mark 1 0 or 1* (PS) * Notes- 1. Home Area ID Number normally consists of five digits. However, four are usually sufficient is the U.S. 2. Access Overload Class is generally made up of a "0" plus the last digits of the telephone number. Some systems set at "15" or "00". 3. Station Class Mark is expressed as four binary digits. 4. Initial Paging Channel is 334 for wireline, 333 for non-wireline systems. 5. The Preferred Mark System is set to "0" for wireline, "1" for non- wireline systems.

A Mobira Service Handset (Modified) may be used. It is made from an ME53 or ME57 handset by opening and adding a jumper to the left of the one factory installed just below the white 24 pin connector joining the top and bottom PCB's. Also, pins 1 and 14 of the handset connector must be jumpered at the radio end. To disassemble the handset, carefully pry off the plastic earpad retaining housing to expose on hexdrive screw. Two other screws are under the rubber plugs at either side of the microphone. The handset then splits apart. This is a ticklish job and isn't recommended except in an extreme case and not with the customer's handset. The modification does not affect normal operation of the handset. It is not known if a Radio handset will work the same. After the Service Handset has been applied: To enter LOCAL MODE (which takes the phone off the air and allows service commands to be obeyed) press 01#. The display should clear and noise is heard from the earpiece. To enter the NAM programming mode, enter 48#. The display shows 48 briefly and clears. ACTION KEYBOARD ENTRY DISPLAY 0 * (5-digit SID) 1 * 1 * XXXXXXXXXX * 10 * 334 * 07 * 0 * 10 * 12345 * Press * to exit NAM programming mode and return to Local Mode. To enter the NAM reading mode, press 49#. The display will show 49.

* PART VII. THE ELECTRONIC SERIAL NUMBER - AN INTRODUCTION When a cellular phone is removed from factory packaging, the ESN normally can be found in the document package (or on a sticker stuck to the phone). This ESN is usually correct and system registration procedes quickly. If the phone is used or has been turned off for non-payment of bills, the person who restores the service needs the ESN in order to program the system with an MIN. Every manufacturer assigns their own ESN, consequently it is possible to have a number of the same ESN's, although each may be produced by a seperate manufacturer. For example, there may be a Motorola ESN of 123456, an Audiovox ESN of 123456, etc. With this in mind it is a possibility that a person could broadcast without changing the ESN, but rather changing the SCM and the SIDH. The ESN is a 32-bit number which uniquely identifies each unit. This ESN is factory programmed and installed and cannot be changed in the field without removing it and reprogramming a new chip. The ESN may or may not be related to the serial number stamped on the outside of the transceiver chassis. The ESN is encoded into messages which are interchanged with the cellular tower. The ESN must be provided when the phone is registered for service. The ESN is an 11-digit number. THE FIRST THREE NUMBERS ARE THE MANUFACTURERS DECIMAL CODE, THE NEXT TWO ARE RESERVED (BUT MAY CONTAIN ZEROS OR NUMBERS) AND THE REMAINING SIX ARE THE DECIMAL SERIAL NUMBER.

****

* PART VIII. IDENTIFYING THE ESN IN YOUR CELLULAR PHONE Depending on what model phone you have, the ESN will be located on a PROM. The PROM is

programmed at the factory, and installed usually with the security fuse blown to prevent tampering. The code on the PROM might possibly be obtained by unsoldering it from the cellular phone, putting it in a PROM reader, and then obtaining a memory map of the chip. The PROM is going to have from sixteen to twenty-eight leads coming from it. It is a bipolar PROM. SEE ESN.GIF FOR ADDITIONAL INFORMATION. The majority of phones will accept the National Semiconductor 32x8 PROM, which will hold the ESN and cannot be reprogrammed. If the ESN is known on the phone, it is possible to trace the memory map by installing the PROM into a reader, and obtaining the fuse map from the PROM by triggering the "READ MASTER" switch of the PROM programmer. In addition, most PROM programming systems include a verify and compare switch to allow you to compare the programming of one PROM with another. As said earlier, the ESN is uniformly black with sixteen to twenty-eight leads emanating from it's rectangular body, or square shaped body. If it is the dual-in-line package chip, (usually found in transportables and installed phones),it is rectangular. If it is the plastic leaded chip carrier (PLCC), it will be square and have a much smaller appearance. Functionally, they are the same chip, but the PLCC is used with hand held cellular phones because of the need for reduced size circuitry. It will have a notch within, and also have writing in small white letters on it. (A black chip with small white letters? Should be easy to spot huh?). Look for the follow letters on the chip: MMI TI NS HARRIS NSC MB DM HM AMD TBP MOTOROLA AMPS Once you have found the chip, try ordering a new one (maybe a couple of new ones) from the businesses in the MERCHANDISE SECTION located at the end of this file.
****
* PART IX. SCANNING TO FIND THE ESN/MIN PAIR Well if you haven't guessed by now, the mobiles ESN and MIN must match in the switch or no go. This is required for billing purposes. If one had the ESN and the mobile phone number (MIN), he could call anytime and anyplace without fear of a trace - let alone a bill. The ideal setup would let you listen with a scanner to the reverse control channel, record and display heard working numbers and ESN's, and recall them as one needs to make calls. This would be it, but we are not quite there yet. But some of the hard work has already been done for us. All the aforementioned codes are sent in hex, in NRZ code (phase-key shifting), when a cellular subscriber places a call. But guess what? All phones have an NRZ receiver and transmitter built right into them. All that has to be done is to have a receiver on the reverse control channel, recover the other subscibers data and save it or print it out. Cellular phones operate on a full duplex channel. One frequency is used for transmission from the base to the phone, while another is used for transmission from the phone to the base. The base frequencies are always exactly 45 MHZ higher than the phone frequency, and both of these are incremented by 30 KHZ as the progression of channels increases from Channel #1 to Chanel #1023 (NOTE: There are no channels between 800 and 990). With some systems (not all) the cellular transmission is received by the base and retransmitted on the base frequency. When this is done, a scanner can listen to both sides of the conversation by simply monitoring the base frequency. When this is not the case, two scanners set 45 MHZ apart will work. Here is a list of all Cellular Frequencies: Non-Wireline Wireline Channel Tx Freq Rx Freq Channel Tx Freq Rx Freq Number Mhz Mhz Number Mhz Mhz 1 870.03 825.03 334 880.02

If the system uses OMNICELLS, as most do, you can readily find all the channels in a cell if you know just one of them, using tables constructed with the instructions below. Cellular frequencies are assigned by channel number, and for all channel numbers, in both wireline and non-wireline systems, the formula is: Transmit Frequency = (channel number x .030 MHz) + 870 MHz Receive Frequency = (channel number x .030 Mhz) + 825 Mhz "Band A" (one of the two blocks) uses channels 1 - 333. To construct a table showing frequency by cells, use channel 333 as the top left corner of a table. The next entry to the right of channel 333 is 332, the next is 331, etc., down to channel 313. Enter channel 312 underneath 333, 311 under 332, etc. Each channel across the top row is the first channel in each CELL of the system; each channel DOWN from the column from the the first channel is the next frequency assigned to that cell. You may have noted that each channel down is 21 channels lower in number. Usually the data channel used is the highest numbered channel in a cell. "Band B" uses channels from 334 to 666. Construct your table in a similar way, with channel 334 in the upper left corner, 335 the next entry to the right. The data channel should be the lowest numbered channel in each cell this time. Cellular Phone Band A (Channel 1 is Data) Cell #

Hi Tom

It's a worry. I hope he's not from down under - NZ. We have a "bridge to nowhere"
http://www.google.com/search?q=bridge+to+nowhere+nz
I guess they do in other countries also.
About to download your program - I will ask nicely.

Neville

well, you mentioned battery packs and the radio. nothing else. perhaps if you had put more emphasis on details (such as number of battery packs, other accessories) then I would probably have not judged so quickly.

Still, my more recent purchase was of a ft-470 with an nc-29 quick charger, a wallwart slow charger, 2 battery packs, speakermic and car/battery charger unit/adaptor for $145.00 (4 months ago).

the radio was in reasonably good shape all around.

I pointed out a common sense point. if you don't like it, oh well (TS).

the other groups were fine. but being a HAM myself, I find it rather unusual to post a forsale of AMATEUR EQUIPMENT in a CITIZENS BAND RELATED newsgroup. What? you want to encourage someone to buy it and then use it without a license?

Technomage

p. btw, thats 2m and 70cm on the HT (and it can be hardware modified to transceiver from 136.0 to 174.0/430-470 Mhz)

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

No, none of the currently available scanners will pick up any Astro system.
The soon (maybe) to be released BC25) and BC785 will work with Astro but at
a hefty price (around $600). Astro is a digital modulation scheme and
existing scanners cannot decode this signal. They can receive it OK, but
you won't hear anything but static. Are you sure the system you want to
monitor is Astro? The BC235 will do Smartnet OK.

No, the BC235 (or the 245, 780, et al) do not demodulate digital signals including Astro. While the radio may likely decode the data channel and display talkgroup ID's (Most Astro systems use the older style data signal) the radio will not be able to hear the conversations.

Some Astro systems have analog talkgroups among the digital ones, some do not. Usually they are set up with the digital groups in the lower talkgroups (16, 48, 112, 144 etc.) and the analog in the higher end of the system (57xxx). In this case just lockout the digital talkgroups and scan the analog ones.

In my area a multi-agency dispatch center has an Astro/APCO-25 system and I can monitor the analog talkgroups just fine with my 245, 780 Pro-92 or Trunker set-up.

The upcoming BC785D/250D will be able to pick up and hear most Astro systems as long as they use the "Common Air Interface" (CAI) mode. CAI is Motrola's way of saying APCO25, the accepted standard for digital communications by the Public Safety community. There are some other types out there that these scanners will not hear. I think Cleveland and Nashville use older "V-SLEP" protocols that would not be heard on the 785D/350D for example.

Very Well said! I agree 100%. Why slam of "flame" someone when we should try and point them in the right direction. Naturally they will try and get top dollar...who wouldn't, or maybe they really do not know the going price.

Lighten up people...it's only a hobby and nobody is twisting your arm to buy the equipment!

Tony - N2XJS

ps- if your mother is not proud of you...I am! (read nect reply)

Hi I have a Regency Z30 an am looking to get a better scanner. Better in this case means getting more channels and a few more bands. I am looking for a scanner that can do all of the regency's bands, plus the aircraft band, and have approximateley 60-100 channels.

Hello all....
I got a new vehicle a few weeks ago and transferred my mobile equipment
over...

and in this new vehicle I get about 1/2 the reception strength.

any suggestions out there on how I might boost my reception in the vehicle
for mobile mounted?

thanks

Well, she is 6' 7" 300lbs, with biceps the size of Baltimore. hobbies include arm-wrestling, pipe smoking, farting contests (to which I might ad, she holds a Gold in the 77/78 festival in Dumfries-UK) She also enjoys the gentle art of self tattoo,in, she has a lovely anchor on her right arm, and a snake with a dagger through it on her forehead with the word "Mummy" in a scroll beneath. very artistic you understand. She is pretty good in the bedroom, but I do wish she would get rid of those sideburns and beard.

You don't say what you're using for an antenna? Also, what type of radio equipment are you using?

Make sure you have a good ground on your radio equipment. Also, you will probably need to install various noise filters, for the alternator, ignition, and possibly computer.

Pick up a new one on Ebay, cheap! Then have your existing service
transferred to it...some places will do it for free, some charge a few
bucks. Just make sure it's what you need, ie; analog vs. digital

can anyone shed some light on how i can find TRANSIT and other MISC
frequencies here in the los angeles area.
i've tried cityfreq and some other sites, just wondering if there are
more sites or if there are publications that cover what i am queiring.
i am looking for the
los angeles convention center frequencies as well. thank you

Hi all,

I'd like to buy a radio scanner Yaesu VR-120 but just in the purpose to hear aviation communications.
Could you tell me if it's a good one for such purpose?
I wouldn't like to pay for an expensive one, and the vr-120 seems very affordable...but is it good quality?
Will I be able to hear airports and aircraft communications with it?

Thanks a lot for your help,

Bruno

Hi Sorcerer,
I'm sorry but there doesn't seem to be a way around this. When putting this database together, I made use of Access2000's extra features and in doing so, made it incompatible with older versions of Access.

Shame really, but I couldn't have my cake and eat it as they say.

1678. BayGen Freeplay 360 AM/FM Self Powered Radio 4 sale.

Newsgroup: rec.radio.scanner
Date: 2002-04-08 00:24:23 UTC
From: "Rodger N. Bird" <rbird2@peoplepc.com>
Message-ID: <MPG.171aad3f2235e5359896b7@trialnews.peoplepc.com>
Source record: 49794

I have a BayGen Freeplay 360 AM/FM Radio for sale. This is a self power radio and will run on the following power Sources:

Internal - B-Motor textured carbon spring driving a DC generator through a transmission.

Solar - High performance thin film solar panel

External - Optional DC adapter (center pin positive) 4.5 V 150mA (minimum)

The Frequency Range is:

FM - 88 to 108 MHz

AM - 520 to 1700 KHz

For more information see the following web pages:

http://windupradio.com/freeplay3.htm

http://www.ogormans.co.uk/freeplay360.htm

http://www.productsforanywhere.com/gear/details/fp_360.html

The Freeplay 360 is in excellent condition and works fine. The selling price of $40.00 includes shipping costs within the continental United States.

Please email me direct if you are interested. Do not reply to this message. My email address is: rbird2@peoplepc.com

Thank you,

Rodger

When I listen to cell frequencies I hear only one side. Does the tower use different frequencies for receive/transmit? If so, where to I find each one? I assume either one is xxxkHz/mHz up/down?

thanks

A data slicer (also called a hamcom interface) is a device that connects to your radio's discriminator tap. When the radio is tuned to a data carrier (like POCSAG), it takes the audio signal and turns it into 1's and 0's so the computer (through the serial port) understands it. There are tons of different uses for 2 and 4 level decoders, they are easy to build and you can find instructions all over the net. Here is a site to get you started: http://www.chenmei.fsnet.co.uk/software/hamcommware.htm

Actually, I believer we are allowed to have hand guns. We just can't carry them on us concealed.

Instead we just take ya out huntin, in the bush or something. And call it an accident.

WOW, what a loophole that one is....

-That depends on which system you intend to monitor. The FCC is very helpful
in cases like this; if you mail your inquiry stating what equipment you've
got and what system you'd like to listen to, you're guaranteed a swift
response.

Use fccinfo@fcc.gov. Hope this helps.

First of all, What cell company still has phones that work in the 800 Mhz ranges? I thought they were all digital. Also I was thinking about getting a Cellular Look alike antenae for the scanner, how well will this cover the 400 mhz range. Is there a different on I should get? I want one that pretty much covers all of the bands will driving, especially the 400mhz and one that is better for 900mhz in my apartment. Thanks for the help.

1698. Questions on Win93 Use.

Newsgroup: rec.radio.scanner
Date: 2002-04-08 17:45:19 UTC
From: Stanley Kaliski <tanker001@yahoo.com>
Message-ID: <Gu9FzJ.GyM@news.boeing.com>
Source record: 49713

I'm new to my PRO-93 and to trunk system scanning. While learning the program and my new scanner I can't seem to figure out the following.

When I'm entering Fleet Map information from a website and it states B0=S0 do you set Block 0 to Type-II? There is no S0 listed in the drop down list.

When entering the ID 400-1 it truncates it to 00400, is 400-01 (which is accepted) the same as 400-1?

Thanks,

Stanley S. Kaliski

Most analogue cell phones are in the 800 Mhz range, if it's a digital cell phone, then they are higher up, with the exception of 800 mhz digital.

As far as the cellular lookalike antenna. I've been using it for a couple of years now, and it works fine. Works on most bands quite well. I don't think just because of the fact that it's a cell lookalike antenna makes it better in the 400-800 range, just the fact that it looks like a cell antenna for design.

1) Yes, S0 is the same as Type II

2) 400-1 is an ID for a Type I Motorola system. Will be accepted if the
Bank is programmed as Type I

00400 is a decimal ID for a Type II Motorols system. Will be
accepted, or converted to, if bank is progammed as Type II.

They are not the same.

1705. Newbie alert... Programming frequency "ranges"?

Newsgroup: rec.radio.scanner
Date: 2002-04-08 21:23:56 UTC
From: scanning68@aol.com
Message-ID: <20020408172356.22612.00002748@mb-fg.aol.com>
Source record: 49720

Hi all,
I have a RS PRO-93 scanner... Let's say - completely hypothetically - that I wanted to program in two different frequency ranges...

Ohhhhh... let's say 902-908 & 925-928, for instance.

This scanner has 10 banks of 30 channels each, where you can program known frequencies in. But in the search mode, there appears to only be one bank (SR5) where you can program in a frequency range. The search banks are assigned in the following manner:

SR0 Marine Band
SR1 CB Band
SR2 Police/Fire
SR3 Aircraft Band
SR4 Ham Band
SR5 Limit search (program yourself)

So would I have to program in one huge range (low of 902MHz to a high of 928MHz) to cover the requisite frequencies, or is there another way to store the second range? My manual seems to imply that SR5 is indeed the only place to store a range... and only one range.

I experimented with storing the 902-928 range - just for kicks - and it was painful. It kept stopping on static in the 916 range, and I had to constantly continue the scanning manually.

Is there any way to store *both* ranges in this scanner, instead of just one?

Also, is there a way to delete a couple of the SR bands from the scanner, such as Ham and Marine? I will never be using them.

Thanks very much...

1706. Re: Questions on Win93 Use.

Source record: 49724

Thanks Walt

1) Understood on that answer.

2) Ok, 400-1 and 00400 are two different systems, gotch ya. The confusion
I'm having is with a fleet map of:
B0=S0
B1=S4
B2=S4
B3=S11
B4=S12
B5=S12
B6=S0
B7=S0

When I try to enter 400-1 into Win93 it converts it over to 00400, which I
don't want, per your answer. When I enter 400-01 it takes it, is 400-01 the
same as 400-1? For Win93 to understand 400-1 does it require the 0 before
the 1, and will the scanner pick up on a 400-1 ID if I program the scanner
with Win93 using 400-01?

Thanks, again for the help
Stan

Try 45 KHz below. If you have a radio with a duplex mode then it's
simple or so I'm told. I never did that myself.

I don't think so. The Pro 92 let you store whatever you wanted while
the Pro 93 gives you one bank and the rest is programmed services.
>
>Also, is there a way to delete a couple of the SR bands from the scanner, such
>as Ham and Marine? I will never be using them.

I don't think so. That's not an issue for me because I can just use
another radio; but if you only had one then too bad I guess.

Yes, you need the leading zero. Enter 400-01 instead of 400-1.

Win93 requires Type-I IDs in the following format:
BFFF-S or BFF-SS

(B = block, F = fleet, S = subfleet).

Win93's Type-I IDs must always be exactly 6 characters long (hence the
leading zero in your 400-01).

I dunno...I guess I don't understand why one would want to unless its
just voyeurism.

There's an entire spectrum of frequencies available including police,
Armed Forces, Federal and State authorities. So that people could
have the convenience of a wireless telephone, a tiny sliver of that
spectrum became private.

I want to be able to speak with my family, my loved ones, or even
perhaps my hooker or bookie without some nosy idiot listening in.

Is that so much to ask?

You'll only get cable audio, if you're lucky. Put one in the attic, or a
long copper wire under the edge of the carpet, or under the eave.

1716. BC 780XLT Question

Newsgroup: rec.radio.scanner
Date: 2002-04-09 01:40:34 UTC
From: Dale Long <longd2@attbi.com>
Message-ID: <mErs8.191211$ZR2.101634@rwcrnsc52.ops.asp.att.net>
Source record: 49732

I'm thinking about buying a BC 780XLT scanner and was wondering how hard or easy it is to operate.
I had a RS Pro-2052 and found it difficult to program.
Maybe it's just the operator ?
Thanks in advance for any advice that can be given.
Dale

The only truly secure radio transmission is encrypted. That's why my cell phone is digital, along with my cordless phone. I don't expect anyone to not listen in because "it's wrong." You know that there's always going to be someone, somewhere listening. That's like asking foriegn countries not to spy on us because it's naughty. If you want privacy, you need encryption.

Tom

I don't know about 780 althrough I think 2052 ain't that bad.
If you're choosing by how hard the thing's to program then steer away from
Yupi9000.
Not that it's hard, just a pain...

Thanks for the brake out of the old FM channels from your cable system.
They were about the same on our system again ten years ago.
Also thanks for the links to the modern digital music services, now
available on cable!
How about SCA on the satellite audio services. There is a lot of audio only
channels on the birds.
Has any one tried a SCA box on the FM band, piggy backed on cable TV
systems?

I don't find it to be too hard to program. But if you're entering a
lot of stuff, do yourself a favor and buy a serial cable, and download
Andy's programming software. It makes it REALLY EASY....

It's easy to operate, somewhat cumbersome to program (manually), as with most scanners. If you get the PC software, it makes programming much easier!

Legalities aside, there is no reason whatsoever for the MOBILE-side to be repeatered. The person using the cellphone, if they're talking to somone on a landline, only needs to hear what the landline party is saying. The cell-site then sends the mobile's transmission by wire (or whatever) to the land party. Nobody's phone or radio "needs" to hear the cellular user's side.

Now, if two people on cellphones are talking with each other, you'd have to find the base-transmit side for each, to hear both sides, as it's really two separate sets of frequencies in use. Unless it's like Nextel's whatchacallit 2-way radio option.

In the 800 MHz band, the mobiles are 45 MHz below the base frequency.

If it's legal where you are. :-)

Even "encryption" is a finite, fallible, and presumably breakable technology. I TRY to always act... on the phone, cellphone, internet, anywhere.. with the presumption that SOMEONE, SOMEWHERE could possibly be eavesdropping. I'm not paranoid about it, and it doesn't alter my life; I just figure it's a remote possibility - kinda like death - and continue on my way

No scanners that I've ever heard of... a few ham radios have them
though. As well as comeercial ones. There's some outfit that's been
promising this option for the Uniden 780 or 785XLT, but AFAIK the thing
has never shown up. So I haven't even bothered to remember who it is.

But if it happens, I'll probably want one, what with the tiny interiors
of today's cars

That's the outfit... they've been around for a long time... I believe
they started with frequency books, mostly for the northeast.

However, the remote control-head for the Uniden 780 has been promised
for about a year, and on their page right now it says:

"Remote 780 Head Adapter: RSC-1 Remote Head Adapter -The remote head
adapter is currently in development. We expect it to be available
sometime during 2002. "

I've heard folks express terminal skepticism that it will ever show up.
Maybe about the time the 785 comes out and the 780 becomes somewhat
obsolete (actually it IS obsolete in many communities already!)

However ScannerMaster IS a good outfit, don't misunderstand me.

Standard advice: If you want privacy, your best bet is in person, second best is wired telephone. Talking on the radio one should not expect privacy. Cell capable scanners are everywhere. downconverters are also very easy to make. That law was passed to give the weak minded a sense of security.

The BC780XLT is easy to operate. The worse part about programming is the documentation. The part about entering the frequencies then setting them into the trunk mode was a little vague. The software method is pretty handy, of course there is a learning curve there, too.

To governments, yes, but not to the average scanner user. I'm talking about the real world application here. If the NSA or someone truly wanted to listen to my cell or cordless phone, it would be easy to do, but my main concern is the thousands of scanners floating around.

Hi Odd Eriksen

I would quite happily send my query to the FCC. I don't fancy their chances of doing anything about it outside the USA, though. (unless there is an undercover branch called the FCCIA, then I'm worried!)

But then I am not interested in their cell frequencies which are not in line with the rest of the world!!

Speak to a tech at a cell phone repair company. He'll give you the Rx/Tx pairs without thinking.

BTW, the idea of a duplex radio being able to recieve both sides won't work. Duplex just means it can Rx and Tx on different freqs at the same time, not Rx on 2 freqs at the same time.

Here's what I got off their site as far as the remote head goes...

Upcoming New Products
BC-780XLT Remote Head: Development continues on this very complex project. The device will include specially-designed microprocessors to mux (multiplex) the numerous signals down to a very small wire for ease of installation and to prevent signal interference and capacitance problems. We anticipate delivery in Spring of 2002. Stay posted through this web page and our e-mail newsletter.

Message-ID: <20020409153219.07238.00002800@mb-dd.aol.com>
Source record: 49612

Is there anyone here that actively listens to frequencies used by the Beachwood, NJ fire department? I have a bunch of freq's, but I not sure which ones are used for which purposes.

I am mainly interested in knowing their dispatch frequency and the frequencies mainly used for comms at fire scenes.

Thanks in advance!

Having watched these posts go by for a couple days now, I've been thinking a little bit about your question.

Consider first, a standard, wired telephone. Part of what is picked up by the microphone is played back through the earpiece. In the telephone trade, this is called "sidetone". It is added to the earpiece at the local phone, and is at a level considerably below the level of signals received from the remote phone. Without sidetone, your conversation sounds empty and flat, and you are not sure if the telephone set is working.

In a cellular situation, your local phone transmits what is picked up by the microphone to the cell tower on one frequency, and the cell tower transmits what is received from the remote phone on a second frequency. So where is the "sidetone" added in? Most likely in the local phone, the same as in a wired phone. Even if the sidetone were added in at the cell tower and transmitted back to the local phone, in order to meet the requirement that the sidetone be at a level considerably lower than the received signal, someone monitoring the signal transmitted by the cell tower would hear the local signal at a considerably lower level than the level of the remote signal. Thus, I suspect that the cell tower only transmits the remote signal.

The situation in a public service repeater is different than in a cellular phone. The public service system is simplex, one person talks at a time. When one presses the push-to-talk switch, their speaker is turned off. I talk, and it is transmitted by the repeater, then you talk, and it is transmitted by the repeater. A third party listener will hear both sides of the conversation.

Hope this helps. Sorry to be so long winded.

Walt

>There is a web site that has the CTCSS tones for Public Safety freqs, anyone know where that is?

What agencies are you trying to determine the tones for?

There is no one web site covering the entire U.S., but there are many sites with information for particular areas.

The PRO-92 will not track individual calls. You can still hear them in conventional mode just as you can on the non-trunking scanner.

It would take a bit more than your average scanner enthusiast but it sure
wouldn't take the NSA. Digital encoding is a transmission mode and was never
intended as a security measure. The protocols are industry standard and are
far from unreproducable.

Be aware that for many years technology has been moving from CTCSS to DCS (digital coded squelch). Some of the systems you want to listen to may be using DCS.

OK, I'll submit the real answer.
If you listen to the North American 850 MHz cell sites transmitters, 869 MHz to 894 MHz, you will only hear
one side of the conversation in a perfect environment.
If the system is degraded due to excessive return
loss, (mostly due to poor landline subscriber loops),
you will be able to hear the other end also.
It turns out that you can only hear both sides of the
conversation if the network condition is poor.

This is becoming a rare situation as the Telco's are
removing the loading coils off of the poles to have
more bandwidth available for modems. And the
electronics are getting better.

The analog activity on the 850 MHz cellular band is becoming rare with more and more 1.9 GHz PCS
CDMA and TDMA digital services.

B.T.W.,
The contribution due to side-tone is negligible, as
there are three components-
-human bone conduction (chin to ear)
-acoustic through the handset
-electrical
The electrical part by itself does not necessarily aid
to hearing both sides of a conversation clearly.
Al

I have a number of ex-AT&T tower sites available, in Missouri and Arkansas.

If you have ever looked at one of these sites, with the concrete buildings a foot thick, the back up generators, the HVAC, electric toilets, etc, you got to know that these are wonderful facilities for HAM radio, survivalists, or just someone that wants to live through the nearby tornado.

The towers are awesome. Ranging from 75 feet to 300 feet, talk about a platform for just about any antenna you could want, as well as potential revenue from rentals.

They start at 20k, and go up, depending on the building, the tower, how much land, etc.

Contact me via email, bbowers@townsqr.com for more information. I may have some adjoining states available also, as well as some of the underground bunkers.

1781. Ways of CTCSS/DCS scanning ?

Newsgroup: rec.radio.scanner

Hi, all:

Lately , I try to use CTCSS/DCS scanning with my FT-50R, but it mute audio output and scan tone quite slowly. That's why I curiously want to ask you and latest finding :

1. Kenwood F7/6 : Received signals are monitored through the speaker while scanning is in progress. CTCSS/DCS Freq. ID Scan does not scan the tone if a signal is not detected.

2. FT-50R: Audio output is muted while scanning is in progress. Tone scanning is quite faster while not no signals deteceted.

3. Do you know ICOM , Uniden , Radio Shack , AOR scanner or other rig scanning behave? Smarter or more stupid?

Miller, in Taiwan

You should have explained that the "letters" are motorola tone codes.

The numbers (frequencies) are what you need.

Happy Scanning and "God Bless America"

I prefer Andy's software. You just need to have MS Excel installed.

I love it. I keep a pretty big excel database with frequencies for different areas, and when I'm going to travel somewhere, I just cut & paste the stuff I want to my 780 database, and upload it to the scanner. It's quick and simple.

I have a mint Uniden BC80XLT with AC adapter and good clip for sale, photo upon request. Nothing modified. Specs below:
800MHz Handheld Programmable
29-956 MHz
50 Channel /5 banks
11 bands including 800MHz
Band search
5 priority channels
Manual channel access
Memory backup
Built-in scan delay
Full frequency LCD display
One-touch weather
Battery-Low indicator
AC/DC AC adapter included
Frequency Coverage
29-54 137-174 406-512 806-956

Asking $75 plus shipping

1797. Icom IC-R2 remote keypad?

Newsgroup: rec.radio.scanner
Date: 2002-04-10 21:45:53 UTC
From: interiot@hotmail.com
Message-ID: <19b0c689.0204101345.7ba96807@posting.google.com>
Source record: 49663

I'm looking into maybe getting the IC-R2 as my first scanner... it looks like it's a good one, and cheap too, but as another poster said, one has to worry about crashing your car while using it.

However, it seems that its minimal keypad could be turned into an advantage for mobile use. Its input method reminds me of how the Twiddler PC keyboard works (http://www.handykey.com/site/twiddler2.html). eg. other than the VFO, it seems you could use it one-handed, without looking.

So, has anyone thought about or attempted to attach a twiddler-esque extension of the IC-R2 keypad to their steering wheel? The scanner is super-tiny, but perhaps it's still possible?

1798. Re: Are UHF 350Mhz aircraft transmissions AM or FM?

If trunktracking is indispensable for you and you live in the US then
get a Bearcat 245xlt. If you dont live in the US and dont have any
books like Police Call with frequencies listings, get a Pro-93, its
easier with the control channel only.
If you want a better scanner, but can live without truntracking,
definitely get a IC-R2.
You might also want to way for the new 250D from Uniden...

I agree on that one. Once you get the IC-R2 you wont believe how bad
and limited the Pro93 and the BC245xlt are.

1804. Re: Ways of CTCSS/DCS scanning ?

Newsgroup: rec.radio.scanner
Date: 2002-04-11 01:56:11 UTC
From: Jim Mac Donald <jmacdon@mitre.org>
Message-ID: <3CB4ED3B.6272CA42@mitre.org>
Source record: 49670
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

The GRE-Radio Shack PRO-92and PRO-2067 do instanous CTCSS/DCS searches and displays them. Then they can be used
in the closed mode tagged to a frequency. The Uniden BC 780 XLT will also search for CTCSS/DCS tones but much
more slowly then us them with a given frequency. The ICOM IC R-2 will search slowly for CTCSS tones only and the R-2 can't handle /DOSE NOT DO the DCS tones. You need about twenty seconds to a minute of steady audio while scanning for tones to 'capture' a tone.If your not getting steady audio when scanning for a tone it can take a long
time to 'capture' or find a tone.
Jim

Wait wait wait wait wait!

Are you trying to say an R2 is better than a 93 or a 245??

If you are, LOL!!

I own an R2, and it's no 93 or 245!

1807. Alinco DJ-X3 Questions

Newsgroup: rec.radio.scanner
Date: 2002-04-11 03:09:46 UTC
From: Pete Ritter <cpritter@attbi.com>
Message-ID: <_77t8.259008$702.50233@sccrnsc02>
Source record: 49673

I have a new DJ-X3 and have a couple of questions.

1. Sometimes when I'm monitoring say the itinerant frequencies and there is a transmission, I hear a loud staticy noise almost like ignition noise. This seems to happen only when it's receiving a transmission. It may come and go during the transmission. The batteries are fully charged. It doesn't seem to have anything to do with signal strength. Anybody have the same problem or know what might be happening?

2. The free programming software from Alinco has tabs "Memory Bank" "Search Pass" and "Priority Memory". For each of these you can set either "Tuning Step" or "Auto Mode and Step". I can understand that you'd want to set step on the "Preset Memory" and "Program Scan" tabs but why on the "Memory Bank" and the others? Am I missing something?

Well to tell you the truth Tom here is a real shady programmer. All
those emails he made you send him to get the password for his program
are now being sold to the highest bidder for SPAM. After contacting
him he mailbombed me with so much spam that I had to delete an account
that I had for years that was very private. But anyway he had no real
reason to do that other than I called his attempt to offer a free
program lame because he forces you to send him an email requesting a
password. Usually when a person or company forces you to send email
traffic to get a password to open a program your email address is sold
for spam or used for some other marketing purposes and so it makes the
offer of a program being free not being free after all. When I called
old Tom boy on it he mailbombed me with so much spam (I have the
originating IP that he used which is 213.122.156.12 which is his
access provider at btinternet.com which was logged by one of the spam
bombs he sent) that I contacted everyone he has to do with to tell
them about his ways. When you see what kind of deal he does with your
email then you will know. I am sure it was stupid of me to contact him
regarding this program with my own email address but it was a spur of
the moment deal. Anyway I still stand by the fact that TOM is a
spammer and I will tell the entire planet wherever he might languish
including is Flight Sim areas what a spammer and untrustworthy piece
of shit he really is. Spammers, Mailbombers and the like have no place
in online society other than the garbage can. IMHO. But again thats
just my two cents worth and you can ask for a refund anytime. He is a
loser and I will continue to document what he did to my email box

until he apologizes or loses his internet access whichver comes first. BTW I did contact the abuse department of his Access provider notifying them of what he did and also sent all the logs of his intrusion and mailbombing activities which are against the law anyway. Who knows maybe he will have to find another provider maybe not. But until I see justice for what he did to me and I am sure countless others I will continue to speak out on what a useless individual this really is.

See Ya TOM

Who knows maybe he will have to find another provider maybe not. But until I see justice for what he did to me and I am sure countless others I will continue to speak out on what a useless individual this really is.

BTW I just read your CAN YOU BELIEVE THIS GUY post. I must reply Tom that you grossly misstated the email. I called it lame to offer a program for free when an email is required. I wrote to you also and apologized as it was a late night and many d/loads had passed and it was frustrating to have that happen when you did NOT advertise fully at the time that EMAIL was required to be sent to you. However you sulked off like a child and mailbombed my email address of which I have logs for as you are to stupid to mask your IP address when bombing and destroyed a rather good email address because you

were angry. You acted as a little child and showed the world that you were a child by then posting that all over Usenet because you needed absolution for your absurd acts of revenge. I do not know if anyone in this group would approve of what you did no matter what you were called. I said it was LAME to offer for free what obviously wasn't. That is all, it was late here and I was tired. I woke up and before I retrieved my morning email I wrote to you and apologized for my rudeness and sent it to you. But because you are a little child you sulked off and mailbombed me with useless Spam that I did not request because you are really indeed lame. No one in USENET or on any group would ever say that they approve of getting their emails filled to the brim with Spam all because they made a rude comment but alas it happens. Why don't you say hey I did wrong and did a stupid lame thing and apologize and do it publicly since you made it public that you took an email address and blew it away because you were upset that someone called your program lame. Sure it maybe has it's purpose for you and I can see that maybe you could put that in your web site advertising that this is required before using and make it where people can see it. I had no IDEA at the time that this was required and said so to you, but alas as a child speaketh a child doeth and you retaliated with malice aforethought. I have each and every log file with your ip on it showing each and every Spam you signed me up for blazingly showing you as the FRAUD you are. If you want to challenge those logs here please do so I have the logs with your IP all over them showing dates times and places. Is that how you deal with the public? Please BEWARE tom.mcq you are a mailbombing spammer and you waste peoples email when you feel like it. If that is OK to this group and the others that you post in then OK. I am wrong for saying all of this and I apologize to you and all here in the group for being a lame ass piece of garbage. Please forgive the posts and the flame. Thank you all for your time and consideration in this matter.

See Ya TOM

1813. MCQ LOG The Real Truth Behind Tom

Newsgroup: rec.radio.scanner
Date: 2002-04-11 06:53:32 UTC
From: an idiot who beileved in TOM <mcqlogisawasteandyouwillgetspammed@fuktom.com>
Message-ID: <_pat8.225$r1.19178@newsfeed.slurp.net>
Source record: 49679

I write this message in hopes of making anyone aware of how MCQ log works in the programmers mind. His name is Tom and he is a Flight Sim buff of sorts although he is only an armchair pilot he calls himself MADOGMCQ. This shows you is mentality of being someone who is mad or a mad dog like a person that gets his feelings hurt and then try's to make an enemy out of them and try's then to destroy them before he himself is destroyed. Of course no one is out to hurt Tom he is just a little boy who was probably raised wrong and had feelings of insecurity and a self esteem problem. When you call or email Tom and complain or call or email and say hey I think you might be wrong or shall I say LAME, he sulks like a little boy needing a spanking and decides you are an enemy and then sets out to mailbomb you or hack into your computer and plant a virus or he try's to get you to download a program that is probably viral. But I digress, anyway Tom a little boy who writes a program called MCQ Log decides one day to password protect it and then offer it for free on the internet in all the usual places that would enjoy a new logging program. Tom does this so he may obtain your email address for marketing purposes. Even though he tells you it is free he then has a clue and that clue is "Hey I can sell these email address's for a profit all the while telling people that my program is free". Not a bad idea and probably a nice way to pay for all the time it took good ol'e Tom to write it. But why not just say to the average downloader hey I need your email first for marketing purposes or to see how many people are downloading it or trying it out, sure I might use your email for my own clever profit schemes but you don't mind do you? Well gee Tom I might as my email is a private email but hey you can use my free account for any purpose you like because your so great and I am so needy. But instead Tom gets an email one day that displeases him he then without warning decides this guy is an enemy CAN YOU BELIEVE THIS GUY he says to himself? He called my attempt to sneak email address from unsuspecting people LAME? Well I am MADDOGMCQ and no one messes with the MADOG or is it MADDOG I still cannot figure that one but I digress. No one messes with the DOG and off he goes to listopt.com and signs up the ENEMY with all sorts of Spam that will never go away. Oooops what is this? An email saying he is sorry? Fuk him I did it already and now I feel somewhat lame for sure but hey wait a minute..... HOLD the BRITISH PHONE BOOTH.... I got it I will go on Usenet and detail everything he said of course I will leave out his apology and of course the fact that I mailbombed him and all the nasty things I did to him from the public. I feel so guilty thinks Tom but I need absolution from my online friends. Only they will make me feel like a MADDOG once again and not some pitiful lame ass piece of shit which I think maybe deep inside my gay ass I am thinks Tom. And now on to the rest of my evil plans to dominate the world.....

The END

It would be funny if it were not true. I have to admit here and now after two days I had to delete the old account and start a new one because of the Spam, sure no one will see my old and funny email address again as it looked silly but it was a part of me and my other half and we enjoyed it for a good while until that is we ran into Tom. What a waste but so is Tom....Thanks for reading this and BUYER BEWARE even if it says FREE it probably isn't.

1814. Re: BC 3000xlt Battery Packs? try YOST/Batteries america

I got a GREAT NiMH battery pack for my 3000XLT, with like 2 day
shipping, from e h yost/batteries america. See
http://www.mrnicd-ehyostco.com/hamradio.htm and go way down the page
to the Uniden/Bearcat section to

For Uniden / Bearcat 2500XLT, 3000XLT, 3500XLT handheld scanners:
BP-2500 6.0v 1100mAh NiMH long-life pack for 2500XLT &
3000XLT. Plug-in charge. Exclusive! $43.00

This pack has a REALLY long life, even better than my previous NiMH from
that good scanner accessories outfit (???) in Illinois... whose name
escapes me at the moment.

Well lets put this all in perspective shall we Tom?? I want to write
everything I wrote here since this is the forum you chose to use to
show how lame you really are so here it is. I will post what I said
and show what you did to anyone who wants to see it. This of course
proves to only me that you are a lame ass fool, anyone else probably
thinks you are ok but me I think you are gay. But that is besides the

point Mr MaddogMCQ. God what a lame ass handle that is I guess you are trying to prove you are a man instead of a little boy but I digress. Here is my point and my post is here for all to see:

Well to tell you the truth Tom here is a real shady programmer. All those emails he made you send him to get the password for his program are now being sold to the highest bidder for SPAM. After contacting him he mailbombed me with so much Spam that I had to delete an account that I had for years that was very private. But anyway he had no real reason to do that other than I called his attempt to offer a free program lame because he forces you to send him an email requesting a password. Usually when a person or company forces you to send email traffic to get a password to open a program your email address is sold for Spam or used for some other marketing purposes and so it makes the offer of a program being free not being free after all. your ip on it showing each and every Spam you signed me up for
blazingly
showing you as the FRAUD you are. If you want to challenge those logs
here
please do so I have the logs with your IP all over them showing dates

times
and places. Is that how you deal with the public? Please BEWARE
tom.mcq you
are a mailbombing spammer and you waste peoples email when you feel
like it.
If that is OK to this group and the others that you post in then OK. I
am
wrong for saying all of this and I apologize to you and all here in
the
group for being a lame ass piece of garbage. Please forgive the posts
and
the flame. Thank you all for your time and consideration in this
matter.

See Ya TOM

Now on to my last post that was posted not here on groups.google but
just in Usenet in general:

I write this message in hopes of making anyone aware of how MCQ log
works in
the programmers mind. His name is Tom and he is a Flight Sim buff of
sorts
although he is only an armchair pilot he calls himself MADOGMCQ. This
shows
you his mentality of being someone who is mad or a mad dog like a
person that
gets his feelings hurt and then try's to make an enemy out of them and
try's
then to destroy them before he himself is destroyed. Of course no one
is out
to hurt Tom he is just a little boy who was probably raised wrong and
had
feelings of insecurity and a self esteem problem. When you call or
email Tom
and complain or call or email and say hey I think you might be wrong
or
shall I say LAME, he sulks like a little boy needing a spanking and
decides
you are an enemy and then sets out to mailbomb you or hack into your
computer and plant a virus or he try's to get you to download a
program that
is probably viral(that has not happned just flaming). But I digress,
anyway Tom a little boy who writes a program called MCQ Log decides
one day to password protect it and then offer it for free on the
internet in all the usual places that would enjoy a new logging
program. Tom does this so he may obtain your email address for
marketing purposes. Even though he tells you it is free he then has a
clue and that clue is "Hey I can sell these email address's for a
profit all the while telling people that my program is free". Not a
bad idea and probably a nice way to pay for all the time it took good

ol'e Tom to write it.
But why not just say to the average downloader hey I need your email first for
marketing purposes or to see how many people are downloading it or trying it
out, sure I might use your email for my own clever profit schemes but you
don't mind do you? Well gee Tom I might as my email is a private email but
hey you can use my free account for any purpose you like because your so
great and I am so needy. But instead Tom gets an email one day that
displeases him he then without warning decides this guy is an enemy CAN YOU
BELIEVE THIS GUY he says to himself? He called my attempt to sneak email
address from unsuspecting people LAME? Well I am MADDOGMCQ and no one messes
with the MADOG or is it MADDOG I still cannot figure that one but I digress.
No one messes with the DOG and off he goes to listopt.com and signs up the
ENEMY with all sorts of Spam that will never go away. Oooops what is this?
An email saying he is sorry? Fuk him I did it already and now I feel
somewhat lame for sure but hey wait a minute..... HOLD THE BRITISH PHONE
BOOTH.... I got it I will go on Usenet and detail everything he said of
course I will leave out his apology and of course the fact that I mailbombed
him and all the nasty things I did to him from the public. I feel so guilty
thinks Tom but I need absolution from my online friends. Only they will make
me feel like a MADDOG once again and not some pitiful lame ass piece of shit
which I think maybe deep inside my gay ass I am thinks Tom. And now on to
the rest of my evil plans to dominate the world.....

The END

It would be funny if it were not true. I have to admit here and now after
two days I had to delete the old account and start a new one because of the
Spam, sure no one will see my old and funny email address again as it looked
silly to everyone but me and my other half but it was a part of me and
my other half and we enjoyed it for a good while until that is we ran

into Tom. What a waste but so is Tom....Thanks for reading this and BUYER BEWARE even if it says FREE it probably isn't.

The End again:

Thanks all for reading this many post's as I realize most people do not enjoy reading some lengthy diatribe, But I wanted to get the whole thing out and clear up any cross posts that I might have written. Plus I think I made the mistake of posting some of it to many times another bad thing to do and I want to apologize to anyone who had to wade through all of that. I just posted here all that I wrote in usenet because I saw that Tom was writing his anger in Usenet a very silly thing to do unless he felt stupid for doing what he did and was really looking for absolution from people. It is often that people on Usenet who have only online friends can find peace and hope for the actions they commit in real life. I know that from researching Tom for the last few days he is an avid flight simmer of which I used to be before I took flying lessons and became a real pilot he is also very limited it seems in real life contacts. That of course is just my opinion of Tom and while I do not want to keep flaming him or treating him bad I wanted to get it off my chest that I too after getting a few hundred emails of spam that he signed me up for did the same to him one afternoon before changing my email address. I know that two wrongs do not make a right and therefore apologize to Tom for my stupid response. I know that people make mistakes and in so doing it shows who they are and what they are made of when they can own up to those mistakes and apologize when they are wrong. So Tom again I am sorry for the rude comment I made that night it was late and while that is no excuse for calling your hard work lame I still think it was more lame of you to seek out and destroy me. I did not ask for that and at best you showed your colors with what you did. But I guess I started it so I am aiming to finish it with you. While I know that babies often continue to cry long after they get what they want I will still attempt to stop here and say thats enough. Later on all.

-----BIG SNIP-----

I find it a little hard to believe that even our Korean friends would want to buy the couple of hundred or so addresses that this will generate. If they do then I'm going to get an offer on my address book!!

If you don't like it, don't subscribe. Write your own software and release it free of charge to everyone in your own way. 'Til then please shut the feck up.

Sorry for my bad english but I'm dutch!

Build your own! Open the batterypack carefully and replace the cells with high capacity rechargeble AA Batteries. With a tape "seal" Them together and connect the cells together!

Greetings

Hans

Hi...
If what you say is right and I doudt it because I haven't noticed any increase in spam... however if I do I will use the create new rule under messages in outlook express to delete it from the server without downloading it to my computer problem solved. You have the other option as suggested, if you don't want to give your email don't, but don't complain about something being lame just because it doesn't suit you to give your email address. Design your own database and post it on the net for free.

I can think of quite a few other reasons why the author might want your email, maybe to keep you informed of updates and patches as the database is being regularly enhanced by add ons and plugins asked for by users. I have found Quite a few notices of updates and I am not going to complain about that, I think submitting your email address in an age when most of us have numerous addresses anyway is a small price (if you can call it that) to pay for such a useful accessory that aids us in the SWL hobby. But What Do I Know... It is just my opinion and I am entiteled to one like you.

Regards
Danny
